Disposition Last Updated by GONZALEZZARAZUA,JORGE A @ 30 Oct 2015 1206 EDT**Released w/o Limitations****Discussed:** Diagnosis, Alternatives with Patient who indicated understanding. - Comments: SEE ADD/NOTE SECTION FOR MORE INFORMATION ON THIS ENCOUNTER.**Note Written by** GONZALEZZARAZUA,JORGE A @ 30 Oct 2015 1206 EDT

Daniel arrived on time and is at session #12 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230-1400, total of 1 ½ hours. The group processed one member's recent relapse, which sparked another member to admit to a relapse. Several group members provided feedback and reported being envious that the two replaces got to drink and voiced disappointment. No other group members admitted to drinking alcohol or abusing drugs since last seen at SARP. The group was reminded that they are here at SARP for treatment of alcohol/drugs.

Daniel opened group today and revealed that he relapsed. He shared that while out with some friends at a steak house he was offered a glass of wine and he decided to accept without hesitation. He states to have drunk two glasses of red wine with his dinner. Daniel reports that although he knows that he is not allowed to drink while in the program, he chose to do so without real regard to what could happen. When confronted by two counselors as why he decided to drink, Daniel stated he just wanted to and felt as if it should be ok for him to have a couple glasses of wine if he wanted to. Daniel also brought up that he initially self-referred himself for other underlying reasons and not specifically because he thought he had an issue with alcoholism. After hearing from a member who also suffered a relapse in the past week, Daniel shared that there were some underlying reasons as to why he decided to drink. He stated that he was upset because he had family over for his re-enlistment the past week and his father decided to not come. He states that his relationship with his father still affects him to this

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

date and believes that the stress of having everyone around and his father being the one person to not show led him to drink.

Daniel appeared comfortable in today's group, sharing and giving feedback to other members. He seemed to lack any remorse or guilt about why he chose to drink and at points appeared to defend his decision. Daniel seems to not trust the group, stating the dynamics have changed since he first started and not feeling comfortable. A SARP staffing will be scheduled for Daniel and his case will be re-evaluated for treatment update. Daniel has an outdated treatment plan and will be scheduled for an individual appointment following the findings of his SARP staffing for treatment planning and updating. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is scheduled to return on 03 November 2015 for his next group session.

No evidence of SI/HI during this encounter.

Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

S/O Note Written by ZEMBRZUSKA,HANNA DOMINIKA @ 02 Oct 2015 1310 EDT**History of present illness**

The Patient is a 30 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

30 y/o single Caucasian man E-6/AD/USN, with approximately 9 ? years continuous active duty service, currently assigned to Fort Meade, Maryland with a past psychiatric history of GAD and Alcohol Use Disorder presents for f/u appt. Pt has been doing well on Zoloft 100mg daily, but has been experiencing anxiety related to work which causes him to think about using alcohol to cope. He has been struggling with hypersomnia rather than insomnia and attended a Sleep Pathways Group. He naps for 30-45 min about three times per day despite sleeping 5-6 hours per night. His PCM referred him to sleep clinic and he has an appt on 17NOV at 10:30AM. He has re-enlisted for 6 more years with a nice financial bonus that he will use to pay off his debts. Re-enlistment ceremony will be on 16OCT and his family is coming. Pt will be on leave 12-23OCT in the local area.

Medication list reviewed with patient, reconciliation completed, and list given to patient.

Visit is not deployment-related.

Pain Severity 0 / 10.

Allergies

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Zoloft 100mg daily
 Melatonin for insomnia.

Past medical/surgical history**Reported:**

- Recent Events: Medication compliance.
 Medical: Reported medical history Penile warts (HPV)
 Neurotic excoriation (scalp picking when anxious)
 Asthma during childhood
 Allergic response to pets
 Recurrent intestinal pain (possibly lactose intolerance)
 PRK (2011)
 and psychiatric history
- * THERAPY: multiple visits with clinical social worker, Linda Nilsen, at WRNMMC, between August 2014 and October 2014. She documented Anxiety Disorder, NOS. The SM indicated that he discontinued his participation in treatment due to the limited impact of these visits.
 - * MEDS: Denies other medication trials
 - * INPATIENT/RESIDENTIAL CARE: Denies psychiatric hospitalizations. Completed 28 day inpatient alcohol rehab at Ft. Belvoir.
 - * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior.

Family history:

F: Alcohol use disorder

M: depression

Sister#1: depression, hx of suicide attempts

Sister#2: bipolar disorder, hx of suicide attempts, unknown drug abuse which led to loss of custody of 2 children

Maternal grandmother: bipolar

Personal history

Social history Pt is the oldest of 3 children from a Sacramento, California home, broken by divorce when the SM was a toddler (3-6 y/o). He and his two sisters were raised by their father, whose employment challenges qualified them for welfare. There was also a tumultuous home environment. Father was not involved with his children and was emotionally/physically abusive. Pt felt that he was an inconvenience to his father. Growing up pt had few friends because he would isolate himself. He left his family abruptly, upon graduation from high school, in 2003. Moved out of state and enrolled in college. He found himself ul experience from the past or avoid having feelings related to it?

- [1] Avoid activities or situations because they remind you of a stressful experience from the past?
- [0] Trouble remembering important parts of a stressful experience from the past?
- [0] Loss of interest in things that you used to enjoy?
- [0] Feeling distant or cut off from other people?
- [2] Feeling emotionally numb or being unable to have loving feelings for those close to you?
- [0] Feeling as if your future will somehow be cut short?
- [0] Trouble falling or staying asleep?
- [1] Feeling irritable or having angry outbursts?
- [1] Having difficulty concentrating?
- [1] Being 'super alert' or watchful on guard?
- [0] Feeling jumpy or easily startled?

Add point values from each response. TotalD.

Behavioral: Caffeine use 4 cups of coffee per day. Stops drinking caffeine after 2pm and never a smoker / Never Used Tobacco Products.

Alcohol: Alcohol use Has drank a few beers recently.

Subjective

NO Learning Disability, Language or Learning Barriers.

Review of systems

No current substance use symptoms

No current cognitive symptoms

No current psychotic symptoms

Physical findings**General Appearance:**

° Alert. ° Well developed. ° Well nourished. ° In no acute distress.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-[REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Neurological:

° No disorientation was observed, oriented x3. ° No hallucinations. ° Memory was unimpaired. ° Remote memory was not impaired. ° Recent memory was not impaired. ° Judgement was not impaired.

Speech: ° Normal, regular rate, non-pressured. ° Rate was not slowed. ° Not pressured. ° Tone was not a monotone.

Psychiatric:

Demonstrated Behavior: ° Behavior demonstrated no abnormalities - appropriate and cooperative. ° No psychomotor retardation. ° Behavior demonstrated no psychomotor agitation. ° No decreased eye-to-eye contact was observed.

Mood: ° Euthymic Able to smile appropriately. ° Not depressed. ° Not anxious.

Affect: ° Normal anxious. ° Not labile. ° Not flat. ° Not constricted. ° Showed no irritability.

Thought Processes: ° Not impaired, they were linear, logical, and goal directed. ° Attention demonstrated no abnormalities. ° Attention span was not decreased.

Thought Content: ° Insight was intact. ° No delusions. ° No suicidal ideation. ° No suicidal plans. ° No suicidal intent. ° No homicidal ideations. ° No homicidal plans. ° No homicidal intent.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-[REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

1. **Visit for: administrative purpose:** DFA negative for HSV1/2 and VZV, confirming previous testing negative for herpetic infection. STD testing in previous month also negative, at this time etiology for ulcerations does not reveal any infectious etiology. Will recommend patient to stop any topical irritant for treatment of molluscum as not demonstrated on clinical exam. Follow up with PCM for repeat exam in 2-3 weeks if new ulcerations or erosions present. If resolving then continue with gentle skin care recommended today. May be due to irritant from alclara used for HPV condyloma. Consider retesting RPR for false negative as syphilitic chancre may still be in differential. If new primary lesions occurring PCM to send back to derm for potential biopsy.

S/O Note Written by CUNNINGHAM, RACHEL ELIZABETH @ 29 Sep 2015 1037 EDT**Chief complaint**

The Chief Complaint is: Rash.

Reason for Visit

Visit for: STAFFED WITH DR. [] HANDFIELD [] GRATRIX [] GREEN [] LACKEY [] KENTOSH [x] MARQUART [] MEYERLE [] STEARNS [] SPERLING [] DARLING

30 yo M with 1 month hx of painful eroded papules in the groin and on the penis, STD workup negative per PCM and previous course of valtrex did not improve. Has hx of multiple sexual partners. Here for further evaluation, notes he does have hx of genital warts and uses alda on them but has not been using it on the areas in question. Partner currently does not have any STD or similar rash. Uses condoms. Has recently had bronchitis with subjective fevers which began before the papules appeared. HIV testing recently negative.

History of present illness

The Patient is a 30 year old male.

He reported: Past medical history reviewed and updated dermatology problem list.

No previous history of skin symptoms. Rash:

Visit is not deployment-related.

Past medical/surgical history

1. SKIN NEOPLASM GROIN: Given punched out erosions on groin hx of multiple sexual partners, will get DFA today to rule out HSV infection. Previous tests showed non acute phase of HSV (IgG positive, IgM negative). Has had course of valtrex 500 twice daily for 10 days 1 month ago but did not resolve, may not have been correct treatment or may represent atypical presentation of another herpetic infection. Rest of STD workup negative.

Laboratory(ies): -HERPES DFA ~ (Routine) Ordered By: CUNNINGHAM,RACHEL E Ordering Provider: CUNNINGHAM, RACHEL ELIZABETH; VARICELLA DFA (Routine) Ordered By: CUNNINGHAM,RACHEL E Ordering Provider: CUNNINGHAM, RACHEL ELIZABETH

2. FOLLICULITIS DECALVANS: Tufted folliculitis in the past on biopsy with scarring alopecia from inflammation and manipulation. Continued reports of itching, flaking and occasional pustules. Will use topical steroid solution daily as needed with antifungal shampoo.

Medication(s): -FLUOCINOLONE-TOP 0.01% SOLN - APPLY TO SCALP EVERY DAY AS NEEDED #1 RF3 Ordered By: CUNNINGHAM,RACHEL E Ordering Provider: CUNNINGHAM, RACHEL ELIZABETH

The Chief Complaint is: Bronchitis & Re-evaluate STD.

History of present illness

The Patient is a 30 year old male.

Pt reported that he came to BAZC on 18Aug2015 to evaluate Bronchitis and Herpes. He states his lab tests came back negative for all speculated STDs, but warts remain on his left genital area.

Pt states that he went to Occ Health, in Fort Meade, apprx 1 week ago to evaluate his bronchitis and he received Mucinex and Zpack but the bronchitis remains. Continues to cough, he is taking his albuterol and ran out of mucinex. He does not have a cough medicine.

General overall feeling /health - Very Good.

QuestionnairesS/O Note Written by JARRETT, ERICA M. @ 23 Sep 2015 1551 EDT**Chief complaint**

The Chief Complaint is: Sleep pathways.

History of present illness

The Patient is a 30 year old male.

This is the patient's second visit to the IBHC clinic.

<<Note accomplished in TSWF-IBHC Group/Class tab>>

Pt attended the second of two Sleep Pathway Shared Medical Appointments.

The following topics were covered: sleep restriction, connections between anxiety/worry and insomnia; beliefs and attitudes that contribute to insomnia; worry management strategies; relaxation/imagery strategies; and relapse prevention.

Reviewed pt's sleep diary. Pt advised . Pt expressed understanding of these recommendations.

Sleep enhancement class, Getting a Good Night's Sleep, offered as part of Women's Health Week.

Discussed: Basics of sleep and treatment for insomnia: stimulus control, sleep hygiene, relaxation strategies, sleep restriction, beliefs and attitudes that contribute to insomnia, and worry management strategies. Provided handouts on the covered topics. Practiced diaphragmatic breathing and provided a brief demonstration of progressive muscle relaxation. Provided information about the CBTi Coach application for smart phones which has a sleep diary and sleep enhancement tools. Reviewed audio downloads for relaxation on the WRNMMC Medical Home, IHWS, Mind-Body Skills Program website.

Recommendations: 1) Limit nap times to less than 30 minutes X 1 and do not nap in the evening; 2) maintain consistent wake ups and bed times during the week/weekends. 3) Keep restricting caffeine use to before noon.

....

Group/Class Intervention

See above.

....

Counseling/Education

Group/Class recommendations for patient:

1) Limit nap times to less than 30 minutes X 1 and do not nap in the evening; 2) maintain consistent wake ups and bed times during the week/weekends. 3) Keep restricting caffeine use to before noon.

<<Note accomplished in TSWF-IBHC Group/Class tab>>

Pt attended the second of two Sleep Pathway Shared Medical Appointments.

The following topics were covered: sleep restriction, connections between anxiety/worry and insomnia; beliefs and attitudes that contribute to insomnia; worry management strategies; relaxation/imagery strategies; and relapse prevention.

Reviewed pt's sleep diary. Pt advised . Pt expressed understanding of these recommendations.

Sleep enhancement class, Getting a Good Night's Sleep, offered as part of Women's Health Week.

Discussed: Basics of sleep and treatment for insomnia: stimulus control, sleep hygiene, relaxation strategies, sleep restriction, beliefs and attitudes that contribute to insomnia, and worry management strategies. Provided handouts on the covered topics.

Practiced diaphragmatic breathing and provided a brief demonstration of progressive muscle relaxation. Provided information about the CBT Coach application for smart phones which has a sleep diary and sleep enhancement tools. Reviewed audio downloads for relaxation on the WRNMMC Medical Home, IHWS, Mind-Body Skills Program website.

Recommendations: 1) Limit nap times to less than 30 minutes X 1 and do not nap in the evening; 2) maintain consistent wake ups and bed times during the week/weekends. 3) Keep restricting caffeine use to before noon.

Released w/o Limitations

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: CC GROUP URINE TEST
 Daniel arrived on time to group. Daniel is at session # 12 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group welcomed a new group member using the introduction exercise. The group discussed "drunk dreams" and control issues. They also discussed how hard it is to be vulnerable. Daniel shared that he has been really sick with a cold. He did admit that he drank cough medicine with alcohol in it. This was revealed after he was told that he has a urine test today. He stated during group he took it Sunday but admitted that he took it yesterday. He shared how he is struggling with control issues. The girl that he is seeing now made him dinner and he was not appreciative but was more critical. The group encouraged him to respect what others do for him. As he spoke group members were seen as checking out by looking around the group and not at him. He monopolized only a few minutes of the group and cut off to allow the group to give feedback. Daniel appeared engaged and interested in the treatment process. Daniel appeared engaged and was appropriate and overly active throughout the session. Daniel moved Problem #1, Objective #7 from his ITP to 20 October 2015. Daniel will continue with Continuing Care treatment and has Problem #1, Objective #7 due 20 October 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 20 October 2015 at 1230 for group. DANIEL WILL NOT BE IN GROUP FOR THE NEXT 4 WEEKS DUE TO LEAVE AND TRAINING.
 No evidence of SI/Hi during this encounter
 Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

S/O Note Written by CORSO, MEGHAN L @ 17 Sep 2015 0858 EDT**History of present illness**

The Patient is a 30 year old male.

He reported: Encounter Background Information: Pt attended the first class of a two part series on sleep. This class opened with a basic discussion on sleep and the physiological effects of sleep deprivation. We also explored sleep disorders including sleep apnea and insomnia as well as treatment for both sleep apnea and insomnia. We covered topics such as: sleep hygiene, stimulus control, fight or flight response and relaxation techniques (deep breathing and PMR). Pt participated in a deep breathing exercise. Instructor also introduced the CBTi app and demonstrated how to use this app for relaxation exercises. Pt instructed to complete sleep diary (instructor walked through in detail) and the online questionnaire.

A/P Written by CORSO, MEGHAN L @ 17 Sep 2015 0859 EDT

1. **Lack of adequate sleep:** Pt goals:
 1) complete sleep questionnaire online
 2) complete sleep diary using CBTi app or paper version
 3) identify 3 areas of sleep habits and set SMART goal
 4) attend class #2 in two weeks

Procedure(s): -Health And Behav Intervention, Each 15 Min Grp (2 Or More) x 3

The Patient is a 30 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

30 y/o single Caucasian man E-6/AD/USN, with approximately 9 ? years continuous active duty service, currently assigned to Fort Meade, Maryland with a past psychiatric history of GAD and Alcohol Use Disorder presents for f/u appt after Zoloft was increased to 100mg daily. Pt has been taking Zoloft 100mg daily without side effects. He did run out of the Zoloft a few weeks ago and was without the medication for 26 hours which caused him to feel dizzy and have flu-like symptoms. These symptoms resolved once he resumed Zoloft. Pt reports that his depressive and anxiety symptoms have been stable. He has been struggling with hypersomnia rather than insomnia recently. He wants to nap throughout the day despite sleeping 6-7 hours per night. His PCM referred him to sleep clinic. He is in a romantic relationship that is going well. He was separated from his shop at work which has worked out well. He has re-enlisted for 6 more years with a nice financial bonus that he will use to pay off his debts.

Medication list reviewed with patient, reconciliation completed, and list given to patient.

Visit is not deployment-related.

Pain Severity 0 / 10.

Allergies

Current Allergies Reviewed. NKDA.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

- * THERAPY: multiple visits with clinical social worker, Linda Nilsen, at WRNMMC, between August 2014 and October 2014. She documented Anxiety Disorder, NOS. The SM indicated that he discontinued his participation in treatment due to the limited impact of these visits.
- * MEDS: Denies other medication trials
- * INPATIENT/RESIDENTIAL CARE: Denies psychiatric hospitalizations. Completed 28 day inpatient alcohol rehab at Ft. Belvoir.
- * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior.

Family history:

F: Alcohol use disorder

M: depression

Sister#1: depression, hx of suicide attempts

Sister#2: bipolar disorder, hx of suicide attempts, unknown drug abuse which led to loss of custody of 2 children

Maternal grandmother: bipolar

Personal history

Social history Pt is the oldest of 3 children from a Sacramento, California home, broken by divorce when the SM was a toddler (3-6 y/o). He and his two sisters were raised by their father, whose employment challenges qualified them for welfare. There was also a tumultuous home environment. Father was not involved with his children and was emotionally/physically abusive. Pt felt that he was an inconvenience to his father. Growing up pt had few friends because he would isolate himself. He left his family abruptly, upon graduation from high school, in 2003. Moved out of state and enrolled in college. He found himself ul experience from the past or avoid having feelings related to it?

- [1] Avoid activities or situations because they remind you of a stressful experience from the past?
- [0] Trouble remembering important parts of a stressful experience from the past?
- [0] Loss of interest in things that you used to enjoy?
- [0] Feeling distant or cut off from other people?
- [2] Feeling emotionally numb or being unable to have loving feelings for those close to you?
- [0] Feeling as if your future will somehow be cut short?
- [0] Trouble falling or staying asleep?
- [1] Feeling irritable or having angry outbursts?
- [1] Having difficulty concentrating?
- [1] Being 'super alert' or watchful on guard?
- [0] Feeling jumpy or easily startled?

Add point values from each response. Total.

Behavioral: Caffeine use 4 cups of coffee per day. Stops drinking caffeine after 2pm and never a smoker / Never Used Tobacco Products.

Alcohol: Not using alcohol Not currently. Did consume alcohol on 27 May 2015.

Subjective

NO Learning Disability, Language or Learning Barriers.

Review of systems

No current substance use symptoms

No current cognitive symptoms

No current psychotic symptoms

Physical findings**General Appearance:**

* Alert. * Well developed. * Well nourished. * In no acute distress.

Neurological:

* No disorientation was observed, oriented x3. * No hallucinations. * Memory was unimpaired. * Remote memory was not impaired. * Recent memory was not impaired. * Judgement was not impaired.

Speech: * Normal, regular rate, non-pressured. * Rate was not slowed. * Not pressured. * Tone was not a monotone.

Psychiatric:

Demonstrated Behavior: * Behavior demonstrated no abnormalities - appropriate and cooperative. * No psychomotor retardation. * Behavior demonstrated no psychomotor agitation. * No decreased eye-to-eye contact was observed.

Mood: * Euthymic Able to smile appropriately. * Not depressed. * Not anxious.

Affect: * Normal anxious. * Not labile. * Not flat. * Not constricted. * Showed no irritability.

Thought Processes: * Not impaired, they were linear, logical, and goal directed. * Attention demonstrated no abnormalities. * Attention span was not decreased.

Thought Content: * Insight was intact. * No delusions. * No suicidal ideation. * No suicidal plans. * No suicidal intent. * No homicidal ideations. * No homicidal plans. * No homicidal intent.

Discussion of risk of assessment and intervention

Interventions Provided at this session:

Vital signs reviewed. No indication for lab and radiology studies at this time.

Objective 1 (Corresponds to Goal #): Anxiety, worry, irritability

-

Interventions:

1. Continue Zoloft 100mg daily. Discussed r/b/se. Obtained informed consent for medication.
2. Continue SARP.
3. Referred pt for individual CBT today.
4. R/o OCD.

Objective 2 (Corresponds to Goal #): Depressed/apathetic mood

-

Interventions:

1. Continue Zoloft 100mg daily. Discussed r/b/se. Obtained informed consent for medication.

Objective 3 (Corresponds to Goal #): Insomnia

-

Interventions:

1. Continue Melatonin QHS pm insomnia
2. Pt to continue using CBT-I app and use progressive muscle relaxation and imagery at bedtime to promote relaxation and decrease ruminative thoughts

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

S/O Note Written by PATSOS,ASHLEY N @ 25 Aug 2015 1230 EDT**History of present illness**

The Patient is a 30 year old male.

The patient was present for the Continuing Care Support Group (CCSG).

A/P Last Updated by PATSOS,ASHLEY N @ 25 Aug 2015 1232 EDT**1. ALCOHOL DEPENDENCE (ALCOHOLISM)**

Procedure(s): -ALCOHOL &/ DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 2 - The patient attended group from 1230-1400.
 -ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - Conducted Case Management to review and update the overall SARP Clinical Record. In addition, reviewed additional services to help assist the patient and to monitor treatment progress and overall service delivered.

Disposition Last Updated by HILL,LARRY D @ 26 Aug 2015 1444 EDT**Released w/o Limitations****Discussed:** Alternatives with Patient who indicated understanding. - Comments: "SEE ADD NOTE SECTION FOR FURTHER INFORMATION CONCERNING THIS ENCOUNTER."**Note Written by HILL,LARRY D @ 26 Aug 2015 1446 EDT****Daniel CC note**

Daniel arrived on time. Daniel is at session # 11 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group was allowed to process and lead the discussion. There was tension in the group and the discussion turned to planning a group social event. Several options were discussed with no definite plan was decided upon. It came to a discussion of what the group was about and how group members supported each other. The group appeared to be storming and by the end of group they began to be more cohesive and a working group. Group went over by 4 minutes because the discussion became about their recovery and how the group can help.

Daniel sounded disappointed as he said "I just do not share in group anymore because I believe no one cares about me and what is going on." Another group member spoke up in the group process saying "this is my therapy and I'm here to use it to help me with my issues because I don't have anything else." Daniel was observed validating her saying "thank you for having the balls to say what I could not." The tension in the room was high as Daniel and another group member had a disagreement with each other. Another group member told Daniel "it sounds like you are always talking out your ass." Daniel sounded defensive in his tone and then brought up an old issue that was processed and gone to take a jab back at this other group member." At this point the group almost completely shut down and the counselors took over to help group member's process what was happening in group. Daniel reported the strength of another group member saying what she felt helped him learn how to deal with and handle situations in group where he is uncomfortable.

Daniel appeared engaged and interested in the treatment process. Daniel appeared annoyed, engaged and was appropriate and active throughout the session. Daniel had no current problems or objectives due from his ITP. Daniel will continue with Continuing Care treatment and has an outdated treatment plan and will schedule an individual session on 1 Sep 15 for review and update. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 1 September 2015 at 1230 for group. No evidence of SI/HI during this encounter Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

Released w/o Limitations

Discussed: Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time and is at session # 10 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group welcomed a new group member using the introduction exercise. Group rules were read and explained for clarification. The entire group denied drinking or using drugs. Group discussed places and events that remind them to drink and the coping skills they are using now. Group processed the worksheet "Create a Friend" and shared how they compared to it in being friends with others. Daniel opened group up with what he called a "new addiction" in his life McDonald's hamburgers. He said "I do not know why I like them they are just good." This counselor helped him understand with a short brief of the brain reward pathway and addiction, helping his understanding. Daniel was observed relating to another group member sharing about relaxing on her patio with a cigar and drink and how hard it is to change places and things related to drinking. Daniel said "I still cannot go out on my patio due to the drinking relationship I had out there. Daniel sounded excited as he reported he no longer uses his old on-line dating sights. At some point in the group Daniel was in the role of a junior counselor and asking opened questions to other group member. Daniel appeared engaged and interested in the treatment process. Daniel appeared engaged and was appropriate and active throughout the session. Daniel has no current problems or objectives due from his ITP. Daniel will continue with Continuing Care treatment and has Problem # 4, Objective # 2 due 25 Aug 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 08 September 15 for group. No evidence of SI/HI during this encounter. Secondary Record maintained at SARP Washington Navy Yard 2024337577

Disposition Written by BROWN,CYNTHIA E @ 12 Aug 2015 1341 EDT**Released w/o Limitations**

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time for group. Daniel is at session # 9 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. No group member admitted to using alcohol or drugs since last seen at SARP. The group began with each member identifying their current feeling in one word. Several group members shared of current struggles including; work, stress, PCS and family issues. The group closed with one group member using the closing exercise.

Daniel was very subdued in the group today. He did not appear to have a need to counsel any other group member which is his normal mode of operando. He only really shared with the group that he has a girlfriend now. They have been together for about 10 days and she makes him really happy. He heard in the closing that he should slow down with the dating scene. The closing member shared that he did not have relationship happiness until his second marriage. Daniel appeared engaged and interested in the treatment process. Daniel appeared engaged and was appropriate and active throughout the session. Daniel has Problem #1, Objective #8 overdue from his ITP. This will addressed upon his return 17 July 2015. Daniel will continue with Continuing Care treatment and has Problem # 4 Objective #2 due 24 August 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 18 August at 1230 for group.

No evidence of SI/HI during this encounter.

Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

Review of systems**Systemic:** No fever, no chills, and no recent weight loss.**Head:** No headache.**Otolaryngeal:** No earache, no nasal discharge, no nasal passage blockage (stuffiness), and no sore throat.**Cardiovascular:** No chest pain or discomfort.**Pulmonary:** No dyspnea and no cough.**Gastrointestinal:** No nausea, no vomiting, no abdominal pain, no bright red blood per rectum, no diarrhea, and no constipation.**Genitourinary:** No change in urinary frequency and no feelings of urinary urgency. No dysuria and no testicular symptoms were present.**Endocrine:** No inadequacy of penile erection.**Musculoskeletal:** No back pain.**Neurological:** No lightheadedness.**Psychological:** Anxiety. Not thinking about suicide. No homicidal thoughts.**Skin:** Skin lesion: penile wart s.**Physical findings****Vital Signs:**

• Temperature: Reviewed. • RR: Reviewed. • PR: Reviewed. • Blood pressure: Reviewed.

General Appearance:

• Normal. • Well developed. • Well nourished. • In no acute distress.

Genitalia:

Penis: • Abnormal 4 warts on the shaft of the penis, aprox 0.01 cm- 0.02 cm, skin colored, on the lower third of the shaft . Pt is shaving the shaft advised against that .

Scrotum: • Normal.

Testes: • Normal.

Neurological:

• Oriented to time, place, and person.

Sensation: • No sensory exam abnormalities were noted.

Balance: • Normal.

Gait And Stance: • Normal.

Reflexes: • Deep tendon reflexes were normal.

Psychiatric:

Mood: • Euthymic.

Affect: • Normal.

Test conclusions

Medication list was updated at the beginning of the visit.

The provider compared the medication list against any orders, and resolved any discrepancies (if required).

A written list of medications was given to the patient.

Practice Management

Preventive medicine services Pt is active duty and is up to date with all immunizations/vaccinations and PHA Screen.

Disposition Written by BROWN,CYNTHIA E @ 29 Jul 2015 1243 EDT

Released w/o Limitations

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: CC GROUP

Daniel arrived on time for group. Prior to group we discussed his need to have the attention of a female in group. We discussed how this was his issue and it needed to not interfere with the group process for him or for her. He was cautioned about being a Junior Counselor trying to give advice to group members instead of keeping the focus on his self. He began to discuss how he was having a female recently and she wanted to touch him but it turned him off. He is not in talk therapy and only does medication management. He was told he would best deal with these issues with Mental Health and he agreed to speak to his medication manager. Daniel is at session # 8 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The entire group denied that they drank alcohol or abused drugs. The group seemed very future oriented speaking of what is coming up for them in the next weeks and months. All group members were encouraged to make their individual treatment planning sessions prior to leaving today.

Daniel did not appear engaged or interested in the treatment process. He noted as having a side conversation with a group and making inappropriate comments to him. He appeared to provide advice to other group members again that had nothing to do with his own experience. Daniel rescheduled Problem #4, Objective #2 stating he needed more time from his ITP. He is late also on Problem #1 Objective #8 and that will be addressed next week. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is scheduled to return 4 August 2015 at 1230 for group.

No evidence of SI/HI during this encounter

Released w/o Limitations

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time for group today. Daniel is at session # 7 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group welcomed a new group member using the introduction exercise. The group denied drinking or abusing drugs since their last report to this group. The group reviewed euphoric recall as a relapse trigger. We discussed the engagement to 12 step meetings or other supportive activities and found most group members reduced the number of meetings attended since starting this program. The entire group was encouraged to make individual session to speak with their primary counselor about the requirements of this group and program.

Daniel shared that he had run out of his Zoloft and went several days without it. He described having withdrawal but stated he is back on it now. He stated that he feels better and knows that the medication is necessary for him. Daniel stated that his only 1 AA meeting and he keeps himself busy the rest of the time. He admitted that he is required to attend more AA meetings (3) by his treatment plan. Daniel appeared engaged and interested in in what the female group member was doing and not the group. He was noted as playing "jr. counselor" in stating that attending AA meetings helps others. Daniel appeared upset at the end of the session and stated that he is using his CBT to assist in his behaviors. Daniel did have Problem 4 Objective 2 due today but failed to forward it. Daniel will continue with Continuing Care treatment and has Problem #4, Objective #2 to be completed next week. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 28 July 2015 at 1230 for group.

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: CC GROUP

Daniel arrived on time to group. Daniel is at session #6 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. No one in group admitted to drinking or abusing drugs. The group welcomed a new group member using the introduction exercise. The group shared the struggles of the last week and any triggers to drink or abuse drugs in the past week. Group completed and discussed the worksheet "Supportive Relationships."

Daniel took up most the group talking in circles. Even when confronted he continued to contradict himself. The group was noted as checking out but no group confronted him this defensive behavior. He did report a childhood incident but did not recall the details enough to assure that the situation happened. He reported on his worksheet that he did not share about this but did. Not enough detail in this and he stated that his parents were notified. Daniel appeared monopolize the group impeding the treatment process. Daniel did not completed any treatment plan objectives and did not have any due. Daniel will continue with Continuing Care treatment and has Problem #4, Objectives #2 and 8 due 21 July 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 21 July 2015 at 1230 for group.

 Pathologist: Laurel R. Stearns, MAJ, MC, USA
 SPECIMEN:
 A: Skin, Scalp, Punch B: Skin, Left scalp, Punch

FINAL DIAGNOSIS:

A. SKIN, SCALP, PUNCH BIOPSY:

- MILD EARLY CHANGES OF ANDROGENETIC ALOPECIA.
(SEE COMMENT)

B. SKIN, LEFT SCALP, PUNCH BIOPSY:

- NORMAL SCALP.

COMMENT: The sections were difficult to interpret due to processing

and

orientation. In part A, the sections show a normal number of terminal

hair

follicles with a slightly increased number of vellus hairs. Mild
superficial perifollicular lymphocytic inflammation is present.

Evidence

of scarring alopecia is not present in multiple additional step

sections.

If clinically indicated additional biopsies may be helpful.

Note Written by HILL,LARRY D @ 01 Jul 2015 1416 EDT**Daniel CCG note**

Daniel arrived on time and is at session 5 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group performed the check-in process identifying changes or events since last group. The group discussed pleasurable activities that they already do and identified one new activity to do before next group. They discussed common styles of thinking and how they apply to themselves and identified individuals who support their addiction and those who support their recovery. No group member admitted to drinking or using since last group. Daniel appeared tense as group began dressed in shorts and a button up shirt. Daniel sounded pained as he addressed another female group member who said she felt uncomfortable with Daniel and said he is a pervert. Daniel reported feeling judge and looked discouraged at the accusations due to their brief contact outside group. They processed these feelings and safety, respect and non-judgmental behaviors for other group members and seemed able to work through their differences. Daniel has a co-occurring sex addiction and seems to be a driving factor in their personal issues that Daniel reports he is working on. Daniel reported meeting a new girl and spending the night with her jumping head first into a relationship knowing this in in direct violation of his own efforts to find a loving relationship. Daniel was able to identify those working against his recovery saying "I'm the number one problem", he additionally identified his sober network those individuals he can call when he struggles. Daniel reported he would like to cook a surprise food for the group, prior to next group.

Daniel appeared uneasy, engaged, interested and was appropriate and active throughout the session even when processing tension between group members. Daniel addressed Problem #1, Objective #1, 4 & 6 from his ITP. Daniel will continue with Continuing Care treatment and has Problem # 1, Objective # 2 due 21 July 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 7 July 2015 for group. No evidence of SI/HI during this encounter. Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

Disposition Last Updated by HILL,LARRY D @ 25 Jun 2015 1230 EDT**Released w/o Limitations**

Discussed: Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time and is at session # 4 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group checked-in and reintroduced themselves to a member that had been absent. They processed cravings and shared about how they sleep now compared to when they were drinking. One group member reported struggling with lack of motivation and not caring about anything. No group member reported drinking or using since last seen at SARP WYN.

Daniel appeared frustrated as he reported feeling judged as another member reported sharing not being comfortable sharing intimate details of her life with men. Daniel said "I feel judge as a man and like you don't trust me, and I'm more comfortable sharing with women than a man." This counselor had to block this interaction noticing some tension between these two group members and identified this to them and both members decided to just drop it and not process this tension. Daniel was observed providing positive feedback to another group member struggling with motivation and not caring saying "it sounds like you could be depressed and should get seen for it." Daniel seems to struggle with female interactions in the group and is noted from him in his past relationships. Daniel wrote "I could relate to everyone today and felt a myriad of feeling."

Daniel appeared engaged, interested and was appropriate and active throughout the session. Daniel addressed Problem # 1, Objective # 1 & 4 from his ITP. Daniel will continue with Continuing Care treatment and has Problem # 1, Objective # 2 & 8 due 21 July 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 30 June 2015 for group. No evidence of SI/Hi during this encounter. Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

S/O Note Written by TAYLOR, BRADLEY MICHAEL @ 23 Jun 2015 0724 EDT**Chief complaint**

The Chief Complaint is: Scalp.

History of present illness

The Patient is a 30 year old male.
30 y/o male. Per patient, has history of MRSA infection on scalp about 5 to 6 years ago. Hair has never completely grown back. More recently has started to develop scale in same area as well as other areas of scalp. Unsure if area has remained the same size. He feels it has been getting larger.

Medication list reviewed with patient, reconciliation completed, and list given to patient.

Allergies

Current Allergies Reviewed.

Past medical/surgical history**Reported:**

Medical: Reported medical history reviewed

Review of systems**Systemic:** No fever and no chills.**Skin:** Pruritus and skin lesion: rash.**Physical findings****General Appearance:**

° Well developed. ° Well nourished. ° In no acute distress.

Neurological:

° Oriented to time, place, and person.

Psychiatric:

Mood: ° Euthymic.

Affect: ° Normal.

Skin:

• Skin: Scalp: Approx 1.5 to 2 cm annular patch of noticeably decreased hair density on posterior apex scalp. Smaller but also annular area next to it. Slightly raised scar like plaque. Follicle drop and tufting of hair noted. Mild erythema and scale.

A/P Last Updated by TAYLOR, BRADLEY M @ 23 Jun 2015 1135 EDT

1. **Alopecia:** Tufted, scarring alopecia on scalp after reported infection about 6 years ago. Patient feels it is slowly progressing. Mild erythema and some scale which feel most likely represents overlying mild seb derm but cannot completely rule out active scarring process. Discussed options with patient to include treating for seb derm and monitoring response vs biopsy for further evaluation. Patient elected to proceed with biopsy. Two punch biopsies completed today. Perilesional and normal posterior scalp. Tolerated well. Wound care discussed. Follow up in 10 to 14 days for suture removal and biopsy results. Sooner for concerns. Ddx includes mature scar w/overlying seb derm v folliculitis decalvans v LPP v other scarring etiologies.

Seen and d/w Dr. Stearns.

Procedure(s):

-Biopsy Skin x 1 - Universal protocol requirements were met per WRNMMC Policy. Patient's identification was checked (name & birthdate). procedure and site, side matches the consent form. the lesion was prepped with alcohol. local anesthesia was provided by local injection with a 30g needle of 1ml of 1% lidocaine with epinephrine. a 4 mm punch biopsy was then performed. estimated blood loss was negligible. the wound was closed with 4 -0 suture, and a sterile dressing applied. wound care discussed, f/u 10 days for suture removal and discussion of path results.

Laboratory(ies):

-Biopsy Skin Each Additional Lesion x 1

-TISSUE EXAM (Routine) Start Date: 06/23/2015 Order Date: 06/23/2015 11:35 Ordered By: TAYLOR, BRADLEY M Ordering Provider: TAYLOR, BRADLEY MICHAEL

Disposition Last Updated by HILL,LARRY D @ 17 Jun 2015 1450 EDT**Released w/o Limitations**

Discussed: Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time and is at session #3 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. The group started with checking in on happenings since last group, the group welcomed one new member and closed with two group members using the introduction and closing exercises. The group shared about life struggles while the where drinking and how they affect them now. No group member admitted to drinking or abusing drugs since last seen at SARP.

Daniel appeared interested as another group member frustratedly listed many reasons why she felt she should drink, use drugs and return to old habits. Daniel was observed relating her struggles to his own life saying "I use to think the same way and when I was drinking I would over use my prescription pain meds knowing I should not but would do it anyways." "I'm disappointed in myself because I continually struggle with relationships and have been with 126 women and had been doing very good but I had sex with two women in the past two days. This to me is my old behavior but it was worse when I was drinking." "I want a health relationship but struggle and don't know how to have one, I'm very picky." Daniel seems to be struggling with a sex addiction and dealing with a myriad of feeling including shame, guilt and disappointment in himself for lack of control.

Daniel appeared engaged and was appropriate and active throughout the session. Daniel addressed Problem #1, Objectives # 1, 4, & 6 from his ITP. Daniel will continue with Continuing Care treatment and has Problem #1, Objective #2 due 21 July 2015. See Daniel's "Continuing Care Progress Report" for more information on this encounter. No evidence of SI/Hi during this encounter. Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

S/O Note Written by ZEMBRZUSKA, HANNA DOMINIKA @ 12 Jun 2015 0728 EDTHistory of present illness

The Patient is a 30 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

30 y/o single Caucasian man E-6/AD/USN, with approximately 9 ? years continuous active duty service, currently assigned to Navy Information Operations Command (NIOC) at Fort Meade, Maryland with a past psychiatric history of GAD and Alcohol Use Disorder presents for f/u appt. Pt has been taking Zoloft 75mg daily without side effects. Pt reports that he continues to be happier more often, but it is not consistent. He reports no difference in his anxiety. He continues to have anxious ruminations about work which lead to initial insomnia. He has been taking Melatonin a few times a week at bedtime, but does not want to take it every night. He is implementing the skills he learned in CBT-I group and using the CBT-I app. Sleeping about 7 hours per night, but finds himself tired in the afternoon and will sometimes take a 30-60min nap. He reports consuming 1/2 pint of alcohol on 27May due to feeling stressed about work and interpersonal difficulty in romantic relationship. He is a people pleaser and has a hard time saying no. He may be separated from his shop at work which he thinks will be better because he does not like his current job. He needs to pick up collateral duties to pick up next rank.

From SARP note: The SM self-referred for SARP evaluation due to his growing concern about his drinking and inability to stop. According to the SM, his alcohol of choice is vodka. He prefers to drink alone at home. His drinking frequency is daily. He reported an increase in his drinking, over the past 8 months, to daily drinking. He described drinking 2 re on 16JUN2014 and was diagnosed with GAD and neurotic excoriation (scalp picking when anxious). He was then referred to a LCSW at WRNMMC for therapy and

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

attended therapy sessions until 30OCT2014. He was then command referred to SARP on 17MAR2015 and diagnosed with Alcohol Use Disorder, moderate to severe. SARP referred pt to a 28 day inpatient alcohol rehab at Ft. Belvoir from which the pt was discharged at the end of April 2015.

Medication list reviewed with patient, reconciliation completed, and list given to patient.

Visit is not deployment-related.

Pain Severity 0 / 10.

Allergies

Current Allergies Reviewed. NKDA.

Current medication

Zoloft 75mg daily

Melatonin for insomnia.

Past medical/surgical history**Reported:**

Recent Events: Medication compliance.

Medical: Reported medical history Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

and psychiatric history

* THERAPY: multiple visits with clinical social worker, Linda Nilsen, at WRNMMC, between August 2014 and October 2014.

She documented Anxiety Disorder, NOS. The SM indicated that he discontinued his participation in treatment due to the limited impact of these visits.

* MEDS: Denies other medication trials

* INPATIENT/RESIDENTIAL CARE: Denies psychiatric hospitalizations. Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

* SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior.

Family history:

F: Alcohol use disorder

M: depression

Sister#1: depression, hx of suicide attempts

Sister#2: bipolar disorder, hx of suicide attempts, unknown drug abuse which led to loss of custody of 2 children

Maternal grandmother: bipolar

Personal history

Social history Pt is the oldest of 3 children from a Sacramento, California home, broken by divorce when the SM was a toddler (3-6 y/o). He and his two sisters were raised by their father, whose employment challenges qualified them for welfare. There was also a tumultuous home environment. Father was not involved with his children and was emotionally/physically abusive. Pt felt that he was an inconvenience to his father. Growing up pt had few friends because he would isolate himself. He left his family abruptly, upon graduation from high school, in 2003. Moved out of state and enrolled in college. He found himself unable to experience from the past or avoid having feelings related to it?

[1] Avoid activities or situations because they remind you of a stressful experience from the past?

[0] Trouble remembering important parts of a stressful experience from the past?

[0] Loss of interest in things that you used to enjoy?

[0] Feeling distant or cut off from other people?

[2] Feeling emotionally numb or being unable to have loving feelings for those close to you?

[0] Feeling as if your future will somehow be cut short?

[0] Trouble falling or staying asleep?

[1] Feeling irritable or having angry outbursts?

[1] Having difficulty concentrating?

[1] Being 'super alert' or watchful on guard?

[0] Feeling jumpy or easily startled?

Add point values from each response. Total:

Behavioral: Caffeine use tea and coffee 1-2x/wk. Never a smoker / Never Used Tobacco Products.

Alcohol: Not using alcohol Not currently. Did consume alcohol on 27 May 2015.

Subjective

NO Learning Disability, Language or Learning Barriers.

Review of systems

No current substance use symptoms

No current cognitive symptoms

Therapy

- Duration of the encounter 30 min.

Practice Management

Continue assessment and intervention
Multi-Disciplinary Treatment Plan:

Treatment Team Members -

Individual Therapist: SARP
Medication Prescriber: ZEMBRZUSKA
Group Therapist: TBD

Additional Provider and treatment: SARP at Washington Navy Yard

Date last updated: 11JUN2015
Reviewed with patient on: same
Does patient agree with plan? Yes
If not, what part?
Projected date of next treatment plan update: f/u in 1 month
Discussion of risk of assessment and intervention
Interventions Provided at this session:

Objective 1 (Corresponds to Goal #): Anxiety, worry, irritability

-

Interventions:

1. Increase Zoloft to 100mg daily. Pt's depressive symptoms appear to have responded to Zoloft, but anxiety is still not under good control. Discussed r/b/se.
2. Continue SARP.
3. Will discuss pt being referred for individual therapy for CBT at next session.
4. R/o OCD.

Objective 2 (Corresponds to Goal #): Depressed/apathetic mood

-

Interventions:

1. Increase Zoloft to 100mg daily. Discussed r/b/se.
2. Continue SARP.
3. Will discuss pt being referred for individual therapy for CBT at next session.

Objective 3 (Corresponds to Goal #): Insomnia

-

Interventions:

1. Continue Melatonin QHS pm insomnia
2. Pt to continue using CBT-I app and use progressive muscle relaxation and imagery at bedtime to promote relaxation and decrease ruminative thoughts

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

S/O Note Written by PATSOS,ASHLEY N @ 09 Jun 2015 1219 EDT**History of present illness**

The Patient is a 30 year old male.

The patient was present for the Continuing Care Support Group (CCSG).

A/P Last Updated by PATSOS,ASHLEY N @ 09 Jun 2015 1221 EDT**1. ALCOHOL DEPENDENCE WITH CONTINUOUS DRINKING BEHAVIOR**

Procedure(s): -ALCOHOL &/ DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 6 - The patient attended group from 1230-1400.
 -ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - Conducted Case Management to review and update the overall SARP Clinical Record. In addition, reviewed additional services to help assist the patient and to monitor treatment progress and overall service delivered.

Disposition Last Updated by HILL,LARRY D @ 10 Jun 2015 1356 EDT**Released w/o Limitations**

Discussed: Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time. Daniel is at session 2 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1400, total of 1 1/2 hours. Group welcomed one new group member using the introduction exercise. The group closed with 2 group members. One group member admitted to drinking while in treatment which led to another group mentioning he drank also. The group processed how they could these struggling group members.

Daniel reported doing well during the check in process and said "I have to be honest with the group; I also had a lapse 2 weeks ago and drank most of pint of vodka. I have been struggling with a female friend that wants to be more than a friend and ended up in a liquor store and bought the bottle. I had unopened cranberry juice at home and mixed them and ended up pouring out some of it." Daniel reported feeling guilty concerning his lapse. Daniels honesty seemed to be brought forward from another group member he knows that shared of a recent lapse. Daniel seems to struggle with self-image and puts a lot of his time and efforts into others writing "I have not been worrying about others and what they think of me." Daniel reports working the 12 steps but has no sponsor. Daniel appeared engaged, interested and was appropriate and active throughout the session. Daniel addressed Problem #1, Objective #1 and 4 attending group and sharing from his ITP. Daniel will continue with Continuing Care treatment and has Problem # 1, Objective # 2 due 21 July 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is schedule to return 16 June 2015 at 1230 for group. No evidence of SI/HI during this encounter Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

Disposition Last Updated by BROWN,CYNTHIA E @ 03 Jun 2015 0801 EDT**Released w/o Limitations**

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: CC GROUP
Daniel is at session # 1 of the 26 scheduled sessions for the Continuing Care treatment program attending from 1230 to 1415, total of 1 1/2 hours. All members of the group denied that they drank or used drugs. The group welcomed a new group member using the introduction exercise. The group discussed in depth what they have gotten out of treatment so far. The group closed with a patient.

Daniel was introduced to the group. He appeared very comfortable with the format and other group members. He shared his coping skill as CBT. He stated that it helps him to regulate his emotions. At one point he engaged in friendly banter with a group member and other group members responded that he will fit in this group. He smiled and appeared to enjoy the engagement. Daniel appeared engaged and interested in the treatment process. Daniel appeared engaged and was appropriate and active throughout the session. Daniel addressed Problem #1, Objective #1 by attending group from his ITP. Daniel will continue with Continuing Care treatment and has Problem #1, Objectives #2 and 8 due 21 July 2015. See Daniel "Continuing Care Progress Report" for more information on this encounter. Daniel is scheduled to return 9 June 2015 at 1230 for group.

No evidence of SI/HI during this encounter

Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

Note Written by BROWN,CYNTHIA E @ 03 Jun 2015 1342 EDT**INDIVIDUAL SESSION CC FOR GROUP INTAKE**

Daniel is at session 1 of the 26 scheduled sessions of the Continuing Care treatment program attending from 0930 to 1030, total of 1 hour. Daniel and I reviewed his treatment plan with the basic requirements for the Continuing Care group. He agreed to all of the terms and conditions. We will establish his goal for treatment when he returns on 9 June 2015 for group at 1230. We reviewed the limitations of confidentiality and he indicated he understood. He indicated that he enjoys using the CBT to regulate his emotion. He admitted that he struggles to find a long term relationship and finds most women to be objectionable in one major way or another. The large number (126) women that he has been with have been disappointing to his standard but he feels very lonely. Daniel appeared engaged and interested in the treatment process. Daniel is to start working on his treatment plan today for the CC group. He addressed Problem #1, Objective #1 by attending this appointment from his ITP. Daniel will continue with Continuing Care treatment and has Problem #1, Objectives #2 and 8 due 21 July 2015. Daniel is scheduled to stay today for group.

No evidence of SI/HI during this encounter

Secondary Record maintained at SARP Washington Navy Yard 202-433-7577.

The Patient is a 30 year old male.

The patient attended the Outpatient Treatment Program (OP).

A/P Last Updated by PATSOS,ASHLEY N @ 27 May 2015 1018 EDT**1. ALCOHOL DEPENDENCE (ALCOHOLISM)**

Procedure(s): -ALCOHOL &/ DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 8 - The patient attended group session from 0900-1100.
 -ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - Conducted Case Management to review and update the overall SARP Clinical Record. In addition, reviewed additional services to help assist the patient and to monitor treatment progress and overall service delivered.

Disposition Last Updated by GONZALEZZARAZUA,JORGE A @ 29 May 2015 1311 EDT**Released w/o Limitations**

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time for his group appointment. He is in Week 4, Day 1 of OP treatment attending from 0900-1100, total of 2 hours. This will be Daniel's last OP session. Today's session opened up with 3 members closing with the group as well as the other group members closing with the departing members.

Daniel performed his closing with the group prior to departing the OP group for the last time and shared that he is doing well and hopes to continue to improve and maintain his sobriety. He states that the skills he has learned are paying dividends for him and wants to use them going forward to maintain a more balanced lifestyle.

Daniel seemed at ease and comfortable performing his closing from OP group. He will be attending an intake appointment with a counselor to commence his Continuing Care.

Daniel showed no evidence of SI/HI/ATV

Next scheduled apt 02 June 2015 @ 1030.

Disposition Written by REGIS.JAMES @ 22 May 2015 1539 EDT**Released w/o Limitations**

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. -
Comments: Daniel arrived on time for his Out Patient (OP) group appointment. He is in Week 4, Day 3 of OP Level 1 treatment which meets from 0900-1100, total of 2 hours here at SARP-WNY. Today was Daniel's 12th day of treatment in group. Neither Daniel nor any other group member admitted to consuming any alcohol or illegal drugs since their last group session. Group began with Daniel doing his check-in with the group members going over any triggers or cravings he may have had during the past couple of days

During Daniel's check-in, Daniel stated that he's looking forward to this weekend because he has plans with the girl that he's been hanging out with. He stated that they hung out last night and that he made dinner for her at his place and the watched a movie together. Daniel also stated that he plans on seeing her tonight and on Sunday where they're supposed to go to Kings Dominion amusement park and spend the day together. This he says will be a huge test for them because it's going to determine if they can spend an entire day together.

Daniel seemed optimistic but challenged about his new girl "friend". He appeared relaxed as if there's no pressure because he's not seeking a girlfriend but mentions several times how these encounters are measures of whether or not they can get along. He was reminded in group to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/HI/ATV

Next scheduled appointment for Daniel will be for OP Level Treatment at BNHC-WNY on the 27th of May 2015 @ 0900 to close out of OP group and start his process to CCG.

Secondary record maintained at SARP Washington Navy Yard (202) 433-7577.

To be reviewed by NBHC-WNY SARP Program Manager on Tuesday 26th of May 2015.

Disposition Last Updated by REGIS,JAMES @ 21 May 2015 1441 EDT**Released w/o Limitations**

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. -
Comments: Daniel arrived on time for his Out Patient (OP) group appointment. He is in Week 4, Day 2 of OP Level 1 treatment which meets from 0900-1100, total of 2 hours here at SARP-WNY. Today was Daniel's 11th day of treatment in group. Neither Daniel nor any other group member admitted to consuming any alcohol or illegal drugs since their last group session. Group began with Daniel doing his check-in with the group members going over any triggers or cravings he may have had during the past couple of days

During Daniel's check-in, Daniel stated that he was looking forward to going on a date again tonight with the same girl he went out with the other day. He also mentioned during group discussion that before he gets to the point of hating anything, that he uses his cognitive tools that he learned in residential treatment to better assess what he is going through and to try to find out what the root of his hatred is all about.

Daniel seemed indifferent regarding his date tonight but became very empathetic and inspired to question and express his thoughts on the need to not have hateful sentiments towards others. He was reminded in group to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs. Daniel showed no evidence of SI/II/ATV

Next scheduled appointment for Daniel will be for OP Level Treatment at BNHC-WNY on the 22nd of May 2015 @ 0900

Secondary record maintained at SARP Washington Navy Yard (202) 433-7577.

Note Written by REGIS,JAMES @ 21 May 2015 1441 EDT**Individual 1-on-1 session w/Counselor for OP Level 1 Step-Down Treatment**

Daniel arrived on time for his Individual 1-on-1 session with his counselor on Wednesday 20th of May 2015 from 08:00 to 09:00 (1 hour). This is Daniel's 1-on-1 Individual session for Week #4 of his OP Level 1 Step-Down Treatment at SARP WNY. He stated that he had a stomach ache and that he believes that there's something wrong with his digestive system. Daniel also stated that his Performance Evaluation for this year continues to be a source of stress for him

because, although they're not received until November 15th, he has to submit it to his CoC by August (which is just a couple of months away). He said that he needs to start doing "stuff" so that he can get a decent evaluation; which is important for him for his career.

Daniel seemed worried and concerned regarding his evaluation. He appears to be putting a lot of anxiety on himself to start doing stuff that can positively reflect on his evaluation. At times, he justified his emotions by saying that if he gets a "Promotable" evaluation (which is a lower evaluation than the "Must Promote" last year) he can still pick-up the next rank in his rate even with that "Promotable" evaluation.

Daniel continues to attend AA meetings and incorporate his abstinence tools towards his sobriety. He was reminded to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/II/ATV

Note Written by MELTON, APRIL M @ 19 May 2015 0826 EDT**Group Therapy Note****Date: 18 May 15****Time w/Patient 1300-1400****Purpose of Group:**

Group members will learn and utilize CBTi components and follow healthy sleep guidelines to assist in managing insomnia.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

The group will also serve as opportunity for group members to share their experiences and gain support from others.

Brief Summary of content of session #4- last session:

Members discussed past week and changes/challenges they have made and come across with incorporating CBTi components, sleep hygiene, completing sleep log and keeping to their calculated sleep window.

Agenda for session four: briefly discussed how thinking influences sleep and how to think in ways that promote sleep, discussed changing dysfunctional core beliefs, ways to quiet the mind (buffer zone). Continued to discuss sleep diary and importance of completing every week for maximum opportunity to improve sleep quantity and quality. Reviewed sleep log, how to calculate Sleep Efficiency for using sleep training/restriction and completed Sleep Need Questionnaire in order to identify if sleep widow should be modified. Encouraged group members to cont to use sleep log and calculate SE on their own if needed. Gave group members as needed extra sleep logs, Sleep need questionnaires, and Addressing Insomnia in the Future handout.

Summary of Patient Information and Participation:

SM reports he continues to use the CBTi app on his phone which helps him record his sleep and automatically calculates his sleep efficiency. Reports his sleep efficiency is ~ 92% and his sleep widow is 930pm-530am. Reports the behavioral and cognitive changes he has made has helped him get better quality and quantity sleep. He cont to reports getting out of bed at the scheduled time is somewhat difficult, but is trying to make it a habit.

He reports he is not as tired throughout the day. Reports he will cont to use the CBTi app and has found it helpful.

Pain: None reported

Mental Status: SM presented to the group dressed appropriately in civilian attire.

His mood was euthymic and affect was congruent with mood. Speech was logical and goal directed with no evidence of loosened associations or flight of ideas. Thought processes were deemed to be intact with no evidence of hallucinations or delusions.

Risk Assessment: SM did not report any SI/HI. Status will continue to be monitored in group and also by individual providers.

Plan: last session- informed group members of future CBTi group sessions and encouraged members to attend for refresher or contact group leader for questions/concerns
Other treatment modalities (e.g. medication management, individual treatment) will continue as planned.

 Comments: Daniel arrived on time for his Out Patient (OP) group appointment. He is in Week 4, Day 1 of OP Level 1 treatment which meets from 0900-1100, total of 2 hours here at SARP-WNY. Today was Daniel's 10th day of treatment in group. Neither Daniel nor any other group member admitted to consuming any alcohol or illegal drugs since their last group session. Group began with Daniel doing his introduction to 2 new group members followed by his check-in going over any triggers or cravings he may have had during the past couple of days

During Daniel's check-in, Daniel stated that he went on another date to a bar last week with another young lady that he met on line. Daniel stated that he found himself again sitting at a bar conversing with his date who was drinking and that he had no desire to drink. Daniel also stated that he really likes this girl because she is into sci-fi like he is which he says is rare. Daniel later said that he knew he cared about this girl because he became nervous around her which showed him that he really liked her. Daniel seemed delighted and peaceful about his date and how successful it turned out. He continues to ask inquisitive and detailed questions in group. Daniel remains adamant when it comes to his programming project. He was reminded in group to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/HI/ATV

Next scheduled appointment for Daniel will be for a 1-on-1 Individual session with his counselor on the 20th of May 2015 @ 0800
 Secondary record maintained at SARP Washington Navy Yard (202) 433-7577.

Today was Daniel's 9th day of treatment in group. Neither Daniel nor any other group member admitted to consuming any alcohol or illegal drugs since their last group session. Group began with Daniel doing his check-in to the group members going over any triggers or cravings he may have had during the past couple of days. During Daniel's check-in, Daniel stated that he went to a bar last night on a date with a young lady that he met on line. Daniel stated that this was the first time that he found himself actually sitting at a bar conversing with his date who was drinking. Daniel stated even though the bartenders came around a couple of time asking him if he wanted a drink, he insisted on just water. Regarding the topic of Peer Pressure that came up in group today, Daniel stated that he too would use a lie as a way to defuse him not drinking. Specifically, Daniel said that he would say he has "diabetes" and that he cannot drink. Daniel seemed blissful about his night and the fact that he didn't have any urge to drink. He stated that he was able to concentrate on his date and getting to befriend her. Daniel continues to appear self-reliant and assertive when it comes to his programming project. Daniel was reminded in group to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs. Daniel showed no evidence of SI/HI/ATV

S/O Note Written by ZEMBRZUSKA, HANNA DOMINIKA @ 15 May 2015 0806 EDT**History of present illness**

The Patient is a 30 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

30 y/o single Caucasian man E-6/AD/USN, with approximately 9 ? years continuous active duty service, currently assigned to Navy Information Operations Command (NIOC) at Fort Meade, Maryland with a past psychiatric history of GAD and Alcohol Use Disorder presents for f/u appt after Zoloft was increased to 75mg daily and he was started on Melatonin. Pt reports that his depressed mood has lifted and he is happier more often, but it is not consistent. He reports no difference in his anxiety, however, he has become more focused and productive. He wants to be a positive role model for others struggling with alcohol. He is again interested in volunteering which is something he did at the prime of his military career. He has been working on his computer game, created an LLC, and is tracking his hours working on the game. He continues to have anxious ruminations about work which lead to initial insomnia. He has been taking Melatonin at bedtime, but does not want to take it every night. He has been attending CBT-I group and using the CBT-I app both of which he has found helpful. He no longer reads his phone prior to bedtime. Sleeping about 7 hours per night. He reports sexual side effects (decreased interest) from Zoloft, but feels that this is beneficial since sex has been a distraction for him in the past.

From SARP note: The SM self-referred for SARP evaluation due to his growing concern about his drinking and inability to stop. According to the SM, his alcohol of choice is vodka. He prefers to drink alone at home. His drinking frequency is daily. He reported an increase in his drinking, over the past 8 months, to daily drinking. He described drinking 2 re on 16JUN2014 and was diagnosed with GAD and neurotic excoriation (scalp picking when anxious). He was then referred to a LCSW at WRNMMC for therapy and attended therapy sessions until 30OCT2014. He was then command referred to SARP on 17MAR2015 and diagnosed with Alcohol Use Disorder, moderate to severe. SARP referred pt to a 28 day inpatient alcohol rehab at Ft. Belvoir from which the pt was discharged at the end of April 2015.

Medication list reviewed with patient, reconciliation completed, and list given to patient.

Visit is not deployment-related.

Pain Severity 0 / 10.

Allergies

Current Allergies Reviewed. NKDA.

Current medication

Zoloft 75mg daily

Melatonin for insomnia.

Past medical/surgical history**Reported:**

Recent Events: Medication compliance.

Medical: Reported medical history Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

and psychiatric history

* THERAPY: multiple visits with clinical social worker, Linda Nilsen, at WRNMMC, between August 2014 and October 2014.

She documented Anxiety Disorder, NOS. The SM indicated that he discontinued his participation in treatment due to the limited impact of these visits.

* MEDS: Denies other medication trials

* INPATIENT/RESIDENTIAL CARE: Denies psychiatric hospitalizations. Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

- * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior.

Family history:

F: Alcohol use disorder

M: depression

Sister#1: depression, hx of suicide attempts

Sister#2: bipolar disorder, hx of suicide attempts, unknown drug abuse which led to loss of custody of 2 children

Maternal grandmother: bipolar

Personal history

Social history Pt is the oldest of 3 children from a Sacramento, California home, broken by divorce when the SM was a toddler (3-6 y/o). He and his two sisters were raised by their father, whose employment challenges qualified them for welfare. There was also a tumultuous home environment. Father was not involved with his children and was emotionally/physically abusive. Pt felt that he was an inconvenience to his father. Growing up pt had few friends because he would isolate himself. He left his family abruptly, upon graduation from high school, in 2003. Moved out of state and enrolled in college. He found himself ul experience from the past or avoid having feelings related to it?

- [1] Avoid activities or situations because they remind you of a stressful experience from the past?
- [0] Trouble remembering important parts of a stressful experience from the past?
- [0] Loss of interest in things that you used to enjoy?
- [0] Feeling distant or cut off from other people?
- [2] Feeling emotionally numb or being unable to have loving feelings for those close to you?
- [0] Feeling as if your future will somehow be cut short?
- [0] Trouble falling or staying asleep?
- [1] Feeling irritable or having angry outbursts?
- [1] Having difficulty concentrating?
- [1] Being 'super alert' or watchful on guard?
- [0] Feeling jumpy or easily startled?

Add point values from each response. TotalD.

Behavioral: Caffeine use 16 oz tea/day and never a smoker / Never Used Tobacco Products.

Alcohol: Not using alcohol Not currently.

Subjective

NO Learning Disability, Language or Learning Barriers.

Additional Screening Questions:

Are you having any thoughts about harming another person? Denies

Do you feel like you are at risk for workplace violence? Denies

Review of systems

No current substance use symptoms

No current cognitive symptoms

No current psychotic symptoms

Physical findings**General Appearance:**

° Alert. ° Well developed. ° Well nourished. ° In no acute distress.

Neurological:

° No disorientation was observed, oriented x3. ° No hallucinations. ° Memory was unimpaired. ° Remote memory was not impaired. ° Recent memory was not impaired. ° Judgement was not impaired.

Speech: ° Normal, regular rate, non-pressured. ° Rate was not slowed. ° Not pressured. ° Tone was not a monotone.

Psychiatric:

Demonstrated Behavior: ° Behavior demonstrated no abnormalities - appropriate and cooperative. ° No psychomotor retardation. ° Behavior demonstrated no psychomotor agitation. ° No decreased eye-to-eye contact was observed.

Mood: ° Dysthymic. ° Anxious. ° Not depressed.

Affect: ° Abnormal anxious. ° Not labile. ° Not flat. ° Not constricted. ° Showed no irritability.

Thought Processes: ° Not impaired, they were linear, logical, and goal directed. ° Attention demonstrated no abnormalities.

° Attention span was not decreased.

Thought Content: ° Insight was intact. ° No delusions. ° No suicidal ideation. ° No suicidal plans. ° No suicidal intent. ° No homicidal ideations. ° No homicidal plans. ° No homicidal intent.

Neurovegetative Assessment: ° Dangerousness assessment: suicide risk Suicide Risk and Protective Factors Review:

(23APR2015) PHQ-9 = 4, GAD-7 = 5, PCL-C = 13

Diagnosis

Generalized Anxiety Disorder
Alcohol Use Disorder, moderate to severe

Active Problem List:

1. Anxiety, worry, irritability
2. Depressed/apathetic mood
3. Insomnia

Long-Term Goals:

1. Improve relationship/increase social support from mother and sister
 2. Improve financial knowledge/pay off debts
- Discussion of risk of assessment and intervention
Interventions Provided at this session:

Objective 1 (Corresponds to Goal #): Anxiety, worry, irritability

Interventions:

1. Continue Zoloft 75mg daily. Discussed r/b/se.
2. Continue SARP.
3. Will discuss pt being referred for individual therapy for CBT at next session.
4. R/o OCD.

Objective 2 (Corresponds to Goal #): Depressed/apathetic mood

Interventions:

1. Continue Zoloft 75mg daily. Discussed r/b/se.
2. Continue SARP.
3. Will discuss pt being referred for individual therapy for CBT at next session.

Objective 3 (Corresponds to Goal #): Insomnia

Interventions:

1. Continue Melatonin QHS pm insomnia
2. Pt to continue using CBT-I app and use progressive muscle relaxation and imagery at bedtime to promote relaxation and decrease ruminative thoughts
3. Continue CBT-I group with Ms. Melton at WRNMMC.

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

Procedure(s): -BEHAVIORAL HEALTH COUNSELING AND THERAPY, PER 15 MINUTES x 1 - Met with patient one-on-one from 0800-0900 to review Individual Treatment Plan.
 -ALCOHOL &/ DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 8 - The patient attended group session from 0900-1100.
 -ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - Conducted Case Management to review and update the overall SARP Clinical Record. In addition, reviewed additional services to help assist the patient and to monitor treatment progress and overall service delivered.

Disposition Last Updated by REGIS,JAMES @ 15 May 2015 0759 EDT

Released w/o Limitations

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. -
Comments: Daniel arrived on time for his Out Patient (OP) group appointment. He is in Week 3, Day 2 of OP Level 1 treatment which meets from 0900-1100, total of 2 hours here at SARP-WNY. Today was Daniel's 8th day of treatment in group. Neither Daniel nor any other group member admitted to consuming any alcohol or illegal drugs since their last group session. Group began with Daniel doing his check-in to the group members going over any triggers or cravings he may have had during the past couple of days. During Daniel's check-in, Daniel stated how excited he was because he had just set up a date for after group with a girl that he's been talking to online. He stated that whether anything happens with her or not, he is OK with that fact. Daniel also mentioned how the Navy is his only family and it's what has validated him throughout these years. He continued to say that the Navy is "all that he has".

Daniel seemed very suspicious and cynical while describing his date. He showed signs of why he has very little belief in his self-worth. However, while he was describing his programing abilities, Daniel continues to appear self-reliant and assertive. Daniel was reminded in group to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/II/ATV

Next scheduled appointment for Daniel will be for OP Level Treatment at BNHC-WNY on the 15th of May 2015 @ 0900

Secondary record maintained at SARP Washington Navy Yard (202) 433-7577.

Note Written by REGIS,JAMES @ 15 May 2015 0800 EDT

Individual 1-on-1 session w/Counselor for Week #3 OP Level 1 Treatment

Daniel arrived on time for his Individual 1-on-1 session with his counselor on Wednesday 13th of May 2015 from 08:00 to 09:00 (1 hour). This is Daniel's 1-on-1 Individual session for Week #3 of his OP Level 1 Treatment at SARP WNY. He stated that he just set up a lunch date with a friend of his. Daniel then stated that, although he is looking forward to seeing his date that he doesn't think she will find him to be "her type" nor like him because she's very attractive. This he explains is directly attributed to his concerns of self-worth along with his anxiety issues that he feels he has to continue working on. Daniel also stated that he continues to write the program for his game which he admits will give him recognition and will validate him as being essential.

Daniel seemed excited and enthusiastic about his lunch date but immediately appeared cautious suspicious when thoughts of his self-worth arose. He continues to show passion for his company and the development of his gaming software along with extreme eagerness to succeed and to be validated.

Daniel continues to attend AA meetings and incorporate his abstinence tools towards his sobriety. He was reminded to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/II/ATV

Next scheduled appointment for Daniel will for his Level 1 OP Group here at WNY on May 11th 2015 @ 09:00

Note Written by MELTON, APRIL M @ 12 May 2015 1138 EDT**Group Therapy Note**

Date: 11 May 15
 Time w/Patient 1300-1400

Purpose of Group:

Group members will learn and utilize CBTi components and follow healthy sleep guidelines to assist in managing insomnia. The group will also serve as opportunity for group members to share their experiences and gain support from others.

Brief Summary of content of session #3:

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Members discussed past week and changes/challenges they have made and come across with incorporating CBTi components, sleep hygiene, completing sleep log and keeping to their calculated sleep window. Agenda for session three: discussed how thinking influences sleep and how to think in ways that promote sleep, discussed changing dysfunctional core beliefs, ways to quiet the mind (buffer zone) and practiced and provided hand out of pleasant imagery exercise. Continued to discuss sleep diary and importance of completing every week for maximum opportunity to improve sleep quantity and quality. Reviewed sleep log, how to calculate Sleep Efficiency for using sleep training/restriction this week and identified sleep window for several members to begin sleep restriction.

Summary of Patient Information and Participation:

SM reports he continues to use the CBTi app on his phone which helps him record his sleep and automatically calculates his sleep efficiency. Reports his sleep efficiency is ~ 92% and his sleep window is 930pm-5am. Reports he is having a hard time getting out of bed in the morning when his alarm wakes up and is not going to bed every night when he is at scheduled time. He reports he is not as tired throughout the day. Reports he will work on this but notices that he is getting to sleep faster, as he is not using his phone to watch news or be stimulated right before bed.

Agreed to complete Sleep Log this week and attend next group session.

Pain: None reported

Mental Status: SM presented to the group dressed appropriately in civilian attire.

His mood was euthymic and affect was congruent with mood. Speech was logical and goal directed with no evidence of loosened associations or flight of ideas. Thought processes were deemed to be intact with no evidence of hallucinations or delusions.

Risk Assessment: SM did not report any SI/HI. Status will continue to be monitored in group and also by individual providers.

Plan: Continue with group meetings 4 weeks

Other treatment modalities (e.g. medication management, individual treatment) will continue as planned.

Comments: Daniel arrived on time for his Out Patient (OP) group appointment. He is in Week 3, Day 1 of OP Level 1 treatment which meets from 0900-1100, total of 2 hours here at SARP-WNY. Today was Daniel's 7th day of treatment in group. Neither Daniel nor any other group member admitted to consuming any alcohol or illegal drugs since their last group session. Group began with the introduction of 1 new group member and a review of group rules followed by a brief discussion concerning phobias and pet peeves of the group.

During Daniel's introduction, Daniel stated that although he bites his nails and picks at his hair, that he is very conscious when other people do that around him. He stated that he doesn't bite them as much now because of his braces but before he had his braces; he explained how he was always doing it. Daniel went on to tell another group member that she would have hated him because he would be biting his nails all the time.

Daniel continues to appear very attentive to the groups needs by continuing to take on the "fixer" role and attempting to solve different issues that arises in group. He seems very insightful on both his current situation and that of the group. Daniel was reminded in group to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/HI/ATV

Next scheduled appointment for Daniel will be for a 1-on-1 Individual session with his counselor on the 13th of May 2015 @ 08:00

Disposition Last Updated by GONZALEZZARAZUA,JORGE A @ 08 May 2015 1425 EDT**Released w/o Limitations**

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time for his group appointment. He is in Week 2, Day 3 of OP treatment attending from 0900-1100, total of 2 hours. The group started off by doing a check-in and summarizing their current emotional state with a feeling word. Daniel and the rest of the group member also shared their respective plans for the upcoming weekend, providing insight and support to each other. Daniel shared that he is excited about his upcoming weekend and states that he has quite a bit of work planned. He shared that he is working on developing a computer game and has set aside a few hours each morning and afternoon to sit down and write code for his game. He also states that he will be attending a Nerf gun event called Zombies vs Humans on Saturday which is a fun way to do Nerf gun battles. He also mentioned that he will be attending a couple self-help meetings each day to satisfy the requirements of his ITP.

Daniel appears comfortable in the group setting, engaging well with others and being vocal about what others are sharing or planning on doing. His check-in and sharing are mostly on the short side and rather vague. Daniel addressed Problem 1, Objective 1 and 2 of his ITP by attending his group session on time and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/HI/ATV

Visual Inspection: ° Abdomen was not distended.

Auscultation: ° Bowel sounds were not diminished or absent.

Palpation: ° Abdomen was soft. ° No abdominal guarding. ° Abdominal non-tender. ° No mass was palpated in the abdomen.

Liver: ° Normal to palpation.

Spleen: ° Normal to palpation.

Hernia: ° No hernia was discovered.

Musculoskeletal System:

Functional Exam:

General/bilateral: ° Mobility was not limited.

Other:

General/bilateral: ° No muscle tenderness.

Neurological:

Sensation: ° No sensory exam abnormalities were noted.

Motor (Strength): ° Strength of the upper extremities was normal. ° No lower extremity weakness was observed.

Balance: ° Normal.

Gait And Stance: ° Normal.

Reflexes: ° Deep tendon reflexes were normal.

Skin:

° Skin: two areas of alopecia on scalp.

S/O Note Written by PATSOS,ASHLEY N @ 06 May 2015 0912 EDT**History of present illness**

The Patient is a 30 year old male.

The patient attended the Outpatient Treatment Program (OP).

A/P Last Updated by PATSOS,ASHLEY N @ 06 May 2015 0913 EDT**1. ALCOHOL DEPENDENCE WITH CONTINUOUS DRINKING BEHAVIOR**

Procedure(s): -ALCOHOL &/ DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 8 - The patient attended group session from 0900-1100.
 -ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - Conducted Case Management to review and update the overall SARP Clinical Record. In addition, reviewed additional services to help assist the patient and to monitor treatment progress and overall service delivered.

Disposition Last Updated by GONZALEZZARAZUA,JORGE A @ 08 May 2015 1430 EDT**Released w/o Limitations**

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time for his group appointment. He is in Week 2, Day 2 of OP treatment attending from 0900-1100, total of 2 hours. The group started off by doing a check-in and summarizing their current emotional state with a feeling word. The group was also reminded by this counselor about abiding by group rules as well as emphasized the importance of owning their own statements.

Daniel shared that he went on a date with a lady he met online. He states that this is the norm for him and that he had no triggers since his last session. He states that he also went to a meeting with a member of his old group in residential treatment after she called him to invite him to a meeting. Daniel also shared with other group members that he thought they were glamorizing their relationship with alcohol versus looking at their current situation.

Daniel appears comfortable in the group setting, engaging with other group members and providing feedback as he sees necessary. However, after his check-in this counselor noticed that Daniel focused largely on everyone else's issues, trying to help out and provide feedback, but did very little sharing of his own. Daniel addressed Problem 1, Objective 1 and 2 of his ITP by attending his group session on time and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/HI/ATV

Next scheduled apt 08 May 2015 @ 0900.

Secondary record maintained at SARP Washington Navy Yard (202) 433-7577.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. -
Comments: Daniel arrived on time for his Individual 1-on-1 session with his counselor on Wednesday 06th of May 2015 at 08:00. This is Daniel's 1-on-1 Individual session for Week #2 of his OP Level 1 Treatment at SARP WNY. He stated that he was put on night shift at his job which with treatment has become an issue for him to stay on. He stated that he is worried about how his command is going to react when he tells them that he cannot work the night schedule because of his treatment program. Daniel also stated that he realizes that his taking Zoloft has diminished his sexual turn-on which he read is a side effect. Daniel mentioned that he is getting very involved in his game writing these days and is thinking about establishing contract with different people in the industry to help with his company. He realizes that he is driving more these days (over 100 miles this past week) to support his treatments in the DMV area.

Daniel seemed indifferent when talking about his treatment plan. However, when explaining his company and the development of his gaming software, Daniel seemed extremely enthusiastic and ecstatic. His job continues to be a source of frustration for him as he deal with a civilian counterpart that is out of the loop of his treatment needs.

Daniel continues to attend AA meetings and incorporate his abstinence tools towards his sobriety. He was reminded to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/HI/ATV

Next scheduled appointment for Daniel will for his Level 1 OP Group here at WNY on May 06th 2015 @ 09:00

Note Written by MELTON, APRIL M @ 05 May 2015 1620 EDT**Group Therapy Note**

Date: **04 May 15**
 Time w/Patient **1300-1400**

Purpose of Group:

Group members will learn and utilize CBTi components and follow healthy sleep guidelines to assist in managing insomnia. The group will also serve as opportunity for group members to share their experiences and gain support from others.

Brief Summary of content of session #2:

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Due to several new group member, Facilitator and co-facilitator provided information from session one to assist new group members in obtaining and understanding CBTi group. Participants introduced themselves, offered personal treatment goals. Agenda for session two discussed and handouts given to group members focusing on sleep guidelines, habits that influence sleep. Discussed sleep diary and importance of completing every week for maximum opportunity to improve sleep quantity and quality, by utilizing learned skills and adhering by sleep guidelines. Reviewed sleep log, how to calculate sleep Sleep Efficiency for using sleep training/restriction this week.

Summary of Patient Information and Participation:

SM reports this week he used the CBTi app on his phone which helped him record his sleep and automatically calculated his sleep efficiency for him. Agreed to complete Sleep Log this week and attend next group session.

Pain: None reported

Mental Status: SM presented to the group dressed appropriately in civilian attire.

His mood was euthymic and affect was congruent with mood. Speech was logical and goal directed with no evidence of loosened associations or flight of ideas. Thought processes were deemed to be intact with no evidence of hallucinations or delusions.

Risk Assessment: SM did not report any SI/HI. Status will continue to be monitored in group and also by individual providers.

Plan: Continue with group meetings 4 weeks

Other treatment modalities (e.g. medication management, individual treatment) will continue as planned.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. -
 Comments: Daniel arrived on time for his Out Patient (OP) group appointment. He is in Week 2, Day 1 of OP Level 1 treatment which meets from 0900-1100, total of 2 hours here at SARP-WNY. Today was Daniels's 4th day of treatment in group. Neither Daniel nor any other group member admitted to consuming any alcohol or illegal drugs since their last group session. Group began with the introduction of 2 new group members and a review of group rules followed by Daniel performing his check-in to the group going over any triggers or cravings he may have had during the past couple of days.

During Daniel's check-in, Daniel stated that he had a productive weekend even though he didn't get a chance to work on his gaming program that much. Daniel stated that he is looking forward to going on a date in Baltimore with a young lady whom he met on a dating website. He stated that she is a software programmer which intrigues him because of his own interest in writing gaming programs.

Daniel seemed indifferent and cautious regarding his leisure activities during this past weekend. He seems to understand how to apply his sobriety tools in different situations even though he appears to question himself. In regards to his date, Daniel looked to be very confident and interested in its outcome. Daniel was reminded in group to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/HI/ATV

Next scheduled appointment for Daniel will be for a 1-on-1 Individual session with his counselor on the 06th of May 2015 @ 0800

Disposition Last Updated by GONZALEZZARAZUA, JORGE A @ 01 May 2015 1445 EDT**Released w/o Limitations**

Discussed: Diagnosis, Alternatives with Patient who indicated understanding. - Comments: Daniel arrived on time for his group appointment. He is in Week 1, Day 3 of OP treatment attending from 0900-1100, total of 2 hours. The group started off by doing a check-in and summarizing their current emotional state with one feeling word. The group was also reminded by this counselor about abiding by group rules as well as emphasized the importance of owning their own statements.

Daniel shared that being in OP group has been good for him as he believes there are still more things he wants to work on, pertaining to his recovery and why he used alcohol to cope with life. He states that he is getting back into the swing of things back at work and is trying to not allow himself to get stressed. He states that for the weekend, he has a trip planned to King's Dominion water park with a friend, allowing him some "fun time" and just relaxing in his place.

Daniel appears comfortable and willing to be an active participant in OP treatment. He seems to want to take charge of his recovery and used some of the tools he learned while in residential treatment. Daniel addressed Problem 1, Objective 1 of his ITP by attending his group session on time and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/HI/ATV

Next scheduled apt 04 May 2015 @ 0900.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Brief Summary of content of session #1:

Facilitator and co-facilitator introduced themselves and provided information regarding CBTi group agenda. Participants introduced themselves, offered personal treatment goals and were asked to complete Insomnia Severity Index, Restless Leg Syndrome Assessment, STOP questionnaire and Dysfunctional Beliefs about Sleep survey. Education on sleep, sleep stages, insomnia and CBTi components provided. Discussed sleep diary and importance of completing every week for maximum opportunity to improve sleep quantity and quality.

Summary of Patient Information and Participation:

Pt presents with a formal diagnosis of GAD and was referred to group by Dr. Zembrzka. Pt stated mood today is good and participated in the group, offering personal treatment goals and reason for attending the group; he wants to improve quality of sleep. Reports he sleeps about 5hrs per night but is in bed for a total of 8hrs. Agreed to complete Sleep Log this week and attend next group session.

Pain: None reported

Mental Status: SM presented to the group dressed appropriately in military uniform. His mood was euthymic and affect was congruent with mood. Speech was logical and goal directed with no evidence of loosened associations or flight of ideas. Thought processes were deemed to be intact with no evidence of hallucinations or delusions.

Risk Assessment: SM did not report any SI/HI. Status will continue to be monitored in group and also by individual providers.

Plan: Continue with group meetings for ~4 weeks. Other treatment modalities (e.g. medication management, individual treatment) will continue as planned.

The Patient is a 30 year old male.

The patient attended the Outpatient Treatment Program (OP).

A/P Last Updated by PATSOS,ASHLEY N @ 29 Apr 2015 0933 EDT**1. ALCOHOL DEPENDENCE WITH CONTINUOUS DRINKING BEHAVIOR**

Procedure(s): -ALCOHOL & DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 8 - The patient attended group session from 0900-1100.
 -ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - Conducted Case Management to review and update the overall SARP Clinical Record. In addition, reviewed additional services to help assist the patient and to monitor treatment progress and overall service delivered.

Disposition Last Updated by REGIS,JAMES @ 29 Apr 2015 1427 EDT**Released w/o Limitations**

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. -
 Comments: Daniel arrived on time for his Out Patient (OP) group appointment. He is in Week 1, Day 2 of OP Level 1 treatment which meets from 0900-1100, total of 2 hours here at SARP-WNY. Today was Daniels's 2nd day of treatment in group. Neither Daniel nor any other group member admitted to consuming any alcohol or illegal drugs since their last group session. Group began with the review of group rules followed by Daniel performing his check-in to the group going over any triggers or cravings he may have had during the past couple of days.

During Daniel's check-in, Daniel stated that he was feeling apathetic because he spoke to his step mother who gave him news about his father's postings on Facebook. Daniel went on to say that he thought his father's actions were childish and that he didn't care about it. He said that his triggers usually involved his being disappointed in relationships which would lead him to drinking. The group asked him about his disappointed relationship with his father and whether or not that's ever caused him to drink; to which he said no.

Daniel seemed perplexed and disappointed when explaining his relationship and arguments with his father. He appears withdrawn and exasperated regarding his rapport with his father. Daniel was reminded in group to continue working on his ITP. Daniel is currently addressing Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs. Daniel showed no evidence of SI/HI/ATV

Next scheduled appointment for Daniel will be for a 1-on-1 Individual session with his counselor on the 1st of May 2015 @ 0800

Questionnaire AutoCites Refreshed by PARSON, MARSHEA S @ 28 Apr 2015 0945 EDT
Questionnaires

Tuberculosis Exposure Risk Assessment Version: 3 Completed On: 28 Apr 2015

1. Since your last Tuberculosis Exposure Questionnaire were you exposed to anyone known to have or suspected of having active tuberculosis (i.e. with persistent cough, weight loss, night sweats, and/or fever)? No
2. Since your last Tuberculosis Exposure Questionnaire or Post Deployment Health Assessment (DD Form 2796), did you have direct & prolonged contact with any individuals of the following groups: refugees or displaced persons: patients hospitalized with tuberculosis, prisoners, or homeless shelter populations? No
3. Write the name of any country or countries where you have traveled or deployed to since your last Tuberculosis Exposure Questionnaire.: N/A
4. During this travel, did you have prolonged direct contact with the local population? Prolonged direct contact is generally understood as having been within six feet of a person with a bad continuous cough for at least eight consecutive hours on a single day, or for a total of at least fifteen hours per week of a multi-week stay.: No
5. Have you had a prior history of TB or prior treatment for Latent TB?: No
6. PROVIDER: Have you recently had a chronic cough AND did you have any of the following at the same time? Fever, Coughed up Blood, Unexplained Weight Loss, Night Sweats: No
7. PROVIDER: Since your last risk assessment, did you develop any of the following conditions: organ transplant; HIV Infection; Immunosuppression secondary to use of prednisone (equivalent of >15mg/day> 1 month) or other immunosuppressive medication such as Humira, Enbrel or Remicade?: No
8. PROVIDER: Since your last TB risk assessment did you develop any of the following conditions: diabetes, silicosis, cancer of head or neck, Hodgkin's disease, leukemia, end stage renal disease, intestinal bypass or gastrectomy, chronic malabsorption syndrome, low body weight (10% or more below ideal weight) or injection drug use?: No

EPWORTH Sleepiness Scale Version: 1 Completed On: 28 Apr 2015

1. How likely are you to doze off or fall asleep while SITTING and READING?: 3
2. How likely are you to doze off or fall asleep while WATCHING TV?: 1
3. How likely are you to doze off or fall asleep while INACTIVE in a meeting, theater, or other similar place?: 0
4. How likely are you to doze off or fall asleep as a PASSENGER in a car for an HOUR without a break?: 3
5. How likely are you to doze off or fall asleep while LYING DOWN to rest in the afternoon when circumstances permit?: 0
6. How likely are you to doze off or fall asleep while sitting and TALKING to someone?: 0
7. How likely are you to doze off or fall asleep while SITTING QUIETLY after a lunch without alcohol?: 1
8. How likely are you to doze off or fall asleep in a CAR, while stopped for a few minutes in the traffic?: 0

History of present illness

The Patient is a 30 year old male.

Annual Periodic Health Assessment includes record review/assessment/counseling of avoidable health risk factors, clinical preventive services, deployment health history, and individual medical readiness assessment IAW MANMED.

Past medical history reviewed, problem list reviewed, medication list reviewed, family history reviewed, and surgical history reviewed.

Military service [] Y [X] N Deployed since previous PHA
 [] Y [X] N Post-Deployment Health Assessment completed
 [] Y [X] N Post-Deployment Health Reassessment completed
 [] Y [X] N Post-Deployment labs/tests completed
 [] Y [X] N Deployment/Shipboard limiting conditions identified
 . Currently on active duty.
 No systemic symptoms.

Navy ADASM educated to the Face to Face PHA. Ft Meade, CTN1. Denies new behavioral health, new medical health complaints. Reviewed problem list. No deployment limiting conditions. Reviewed and educated to Framingham and survey results.

Past medical/surgical history**Reported:**

Medical: Not currently wearing eyeglasses If Yes, do they have 2 pairs? [] Yes [X] No. No chronic illness. An allergy SEE ABOVE.

Medications: Medication history SEE ABOVE. Not taking medication for high blood pressure.

Tests: A hearing test was performed 1) Is there a DD 2215 (baseline hearing test) in the health record? [X] Yes [] No

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

- 2) Is there a complaint of tinnitus that has not been addressed? [] Yes [X] No
 3) Is there a complaint of changes in hearing since the last hearing test? [] Yes [X] No
 4) Is there an in-depth audiometric evaluation in the record when existing hearing tests shows thresholds in either ear at 500, 1000 and 2000 Hz that average 30 dB or greater or 45 dB or greater at 3000 Hz or 55 dB or greater at 4000 Hz? [] Yes [X] No
 5) If the patient is enrolled in a Hearing Conservation Program, has there been a monitoring audiogram within the past 12 months? [] Yes [X] No.

SEE ABOVE.

Family history

No family history of cancer
 Mental illness (not retardation) MATERNAL
 Heart disease PATERNAL GF, Father
 Diabetes mellitus PATERNAL GF and Father.

Review of systems

Head: No head symptoms.
Neck: No neck symptoms.
Eyes: No eye symptoms.
Otolaryngeal: No otolaryngeal symptoms.
Breasts: No breast symptoms.
Cardiovascular: No cardiovascular symptoms.
Gastrointestinal: No gastrointestinal symptoms.
Genitourinary: No genitourinary symptoms.
Endocrine: No endocrine symptoms.
Hematologic: No hematologic symptoms.
Musculoskeletal: No musculoskeletal symptoms.
Neurological: No neurological symptoms.

Physical findings**Vital Signs:**

° Current vital signs reviewed.

General Appearance:

° Well-appearing.

Head:

Appearance: ° Head normocephalic.

Musculoskeletal System:

General/bilateral: ° Normal movement of all extremities.

Neurological:

° Level of consciousness was normal.
 Speech: ° Normal.
 Coordination / Cerebellum: ° No coordination/cerebellum abnormalities were noted.
 Balance: ° Normal.
 Gait And Stance: ° Normal.

Psychiatric:

Affect: ° Normal.
 Thought Processes: ° Not impaired.
 Thought Content: ° Revealed no impairment.

Note Written by PONDS,BRANDON J @ 28 Apr 2015 0928 EDT

Thank You for Completing the Fleet and Marine Corps Health Risk Assessment

You rated your health as Good. Personal perception about how healthy you are is usually quite accurate. Your Personal Health Risk Appraisal Report identified 4 risk categories from the answers you provided that relate to overall health, which places you in a **MEDIUM** risk group. Numbers of risk factors have been shown to predict future health care use and health care costs. It is important for individuals to move toward the "low risk" category by reducing the number of behavioral risks, and for those already at low risk, to avoid increasing the number of risk factors over time.

<table border="1"> <tr> <td>High Risk</td> <td>= 5 or more risk categories</td> </tr> <tr> <td>Medium Risk</td> <td>= 3-4 risk categories</td> </tr> <tr> <td>Low Risk</td> <td>= 0-2 risk categories</td> </tr> </table>	High Risk	= 5 or more risk categories	Medium Risk	= 3-4 risk categories	Low Risk	= 0-2 risk categories	<p>You reported 4 categories, which places you at MEDIUM risk.</p> <p>The categories you scored "unhealthy" on included:</p> <ul style="list-style-type: none"> • Stress Management • Sexual Health • Nutrition • Sleep
High Risk	= 5 or more risk categories						
Medium Risk	= 3-4 risk categories						
Low Risk	= 0-2 risk categories						

 **Body Mass Index (Note the limitations of BMI below) — Normal Weight**

http://www.cdc.gov/nccdphp/dnpa/bmi/adult_BMI/about_adult_BMI.htm

YOUR BODY MASS INDEX = 22.1.

Both being overweight or being underweight are related to increased risk of disease and death. Among most Americans, BMI is a reliable indicator of total body fat. It is an inexpensive and easy-to-perform method of screening for weight categories that may

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

lead to health problems. Limitations of BMI are that it may overestimate body fat in athletes and others who have a muscular build or underestimate body fat in individuals who lack lean muscles mass.

 **TOBACCO USE—** *Never used tobacco* <http://www.ucanquit2.org>
<http://betobaccofree.hhs.gov/>

You are doing the single most important thing to stay healthy! Not smoking saves you money (over \$2000/year for one pack per day), helps you avoid many tobacco related diseases, and adds to your fitness level and overall health.

 **TOBACCO USE—** *Never used tobacco* <http://www.ucanquit2.org>
<http://betobaccofree.hhs.gov/>

Not using smokeless tobacco is a great choice. You can avoid oral cancer, tooth and gum disease, and maintain a fresh and clean mouth.

 **ALCOHOL USE—** *No* <http://www.nlm.nih.gov/medlineplus/alcoholconsumption.html>

 **ALCOHOL USE—** *Never* <http://www.rethinkingdrinking.niaaa.nih.gov/>

You indicate a healthy choice not to drink heavily, even during celebrations. Sailors and Marines also look out for their shipmates and fellow Marines who have been drinking.

 **ALCOHOL USE—** *Never (i.e. not during the past year)*
<http://www.rethinkingdrinking.niaaa.nih.gov/>

You are being a responsible Sailor or Marine by never driving drunk or riding with someone who has been drinking. You can also help fellow Sailors and Marines avoid alcohol related incidents by looking out for those who try to drink and drive - and help them get home safely.

 **INJURY PREVENTION—** *Always* <http://www.nhtsa.gov/Driving+Safety>

By always using your seat belt, you decrease your risk of serious injury or death after an accident by about 50%.

 **INJURY PREVENTION—** *Always* <http://www.nhtsa.gov/Driving+Safety>

Your use of a protective helmet provides significant protection against head injury or death. Wearing other protective gear, maintaining control of your vehicle, and driving defensively can also reduce your risk.

 **INJURY PREVENTION—** *Always* <http://www.cdc.gov/niosh/topics/safety.html>

You are protecting yourself against injuries and disease at your worksite by using appropriate safety equipment

Created: 30 Oct 2017

STRESS MANAGEMENT— *Somewhat satisfied*<http://www.nlm.nih.gov/medlineplus/stress.html> <http://afterdeployment.dcoe.mil>

You are only somewhat satisfied with your life. Life satisfaction is a common goal that we as human beings strive to achieve. Work, relationships and social activities can all contribute to life satisfaction. Look to these sources for improving your level of satisfaction.

STRESS MANAGEMENT— *Sometimes*<http://www.med.navy.mil/sites/nmcscd/nccosc/serviceMembersV2/stressManagement/theStressContinuum/Pages/default.aspx> <http://startmovingforward.dcoe.mil>

Occasional stress in your work or at home is common. Problem-solving or discussing possible solutions with someone else may help reduce or eliminate some of your stress.

STRESS MANAGEMENT— *Sometimes*<http://www.helpguide.org/topics/relationships.htm> <http://afterdeployment.dcoe.mil>

Finding someone with whom you can talk can help you see that you are not alone in how you feel. Talking with others can also provide you with strategies to successfully manage your concerns. Counselors and chaplains are available to assist you. .

SEXUAL HEALTH— *Most of the time*[http://www.med.navy.mil/sites/nmcphc/health-](http://www.med.navy.mil/sites/nmcphc/health-promotion/reproductive-sexual-health/Pages/condoms.aspx)[promotion/reproductive-sexual-health/Pages/condoms.aspx](http://www.med.navy.mil/sites/nmcphc/health-promotion/reproductive-sexual-health/Pages/condoms.aspx)

Choosing to use a latex condom consistently and correctly each time you have sex will significantly reduce your risk of acquiring a sexually transmitted infection

PHYSICAL ACTIVITY— *3 weeks per month*<http://www.cdc.gov/physicalactivity/everyone/guidelines/adults.html>

To promote and maintain health, all healthy adults aged 18-64 years need moderate-intensity aerobic activity for a minimum of 150 minutes each week or vigorous-intensity aerobic activity for 75 minutes each week. Combinations of moderate- and vigorous-intensity activity can be performed to meet this recommendation. Exercise sessions can be broken up into as little as 10 minutes at a time.

PHYSICAL ACTIVITY— *2 days per week*<http://www.cdc.gov/physicalactivity/everyone/guidelines/adults.html>

Muscle-strengthening activities should work all the major muscle groups of your body (legs, hips, back, chest, abdomen, shoulders, and arms). To gain health benefits, muscle-strengthening activities need to be done to the point where it is hard for you to do another repetition without help. Adding muscle allows you to do more activities, improves appearance, and reduces the risk of several chronic diseases.

NUTRITION— *At least 3-5 times per week or more*<http://www.cdc.gov/nutrition/everyone/basics/fat/index.html>

Some dietary fat is needed for good health, but high levels of fat in your diet may lead to excessive weight gain and increase your risk of certain cancers. Eating foods high in saturated and trans-fats also increases your risk of heart disease. Select foods low in

Anderson, Daniel Dennis

saturated fats, trans fats, and cholesterol; eat plenty of whole grains, fruits and vegetables; and choose low fat milk products and lean meats.

NUTRITION— Two <http://www.cdc.gov/nutrition/everyone/fruitsvegetables/index.html>

The national goal for Americans is to consume at least two servings of fruits per day. Fruits and vegetables contain essential vitamins, minerals, and fiber that may help protect you from chronic diseases and can make weight control easier. The actual number of cups of fruits and vegetables needed daily also depends on an individuals age, gender, and level of physical activity.

SUPPLEMENTS— Never <http://humanperformancecenter.org/dietary-supplements>

People choosing to supplement their diets with herbals, vitamins, minerals, or other substances need to know about the products they choose so that they can make informed decisions about them. The choice to use a dietary supplement can be a wise decision that provides health benefits. However, under certain circumstances, these products may be unnecessary for good health or they may even create unexpected risks or interact with medications. It is wise to ask your physician or pharmacist before taking supplements.

DENTAL— Daily <http://www.ada.org/public.aspx>

You are to be commended for flossing your teeth daily. Daily flossing is recommended to remove plaque and food particles from between the teeth and under the gum line, which prevents gum disease, tooth loss, decay, and bad breath. In addition to flossing, the American Dental Association recommends brushing your teeth twice a day with fluoride toothpaste to achieve good dental health.

NUTRITION— Two <http://www.cdc.gov/nutrition/everyone/fruitsvegetables/index.html>

The national goal for Americans is three servings of vegetables per day, with at least one being a dark green or orange vegetable. Fruits and vegetables contain essential vitamins, minerals, and fiber that may help you from chronic diseases and can make make weight control easier. The actual number of cups of fruits and vegetables needed daily also depends on an individuals age, gender, and level of physical activity.

SLEEP— Sometimes <http://www.med.navy.mil/sites/nmcphc/health-promotion/psychological-emotional-wellbeing/Pages/sleep.aspx>

People who get enough restful sleep are able to concentrate on their activities, have more energy, and generally feel better. For many people with busy schedules, it is important to set aside enough time for sleep and to avoid issues at bedtime that can interfere with sleep. Talk with your physician if you are frequently unable to achieve restful sleep.

PREGNANCY— My partner or I are correctly and consistently using birth control ALL the time <http://www.med.navy.mil/sites/nmcphc/health-promotion/reproductive->

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

sexual-health/Pages/contraception.aspx

There is a wide range of new, safe and effective contraception options available, some that work for years after you have started them. Some are permanent and others are easily and quickly reversible when you are ready to have a baby. But not all forms of contraception are equally effective. It makes sense to carefully consider your parenting plans and get informed about contraception so you and your partner can select the option that works best for you. Be well informed about contraception, and talk with your partner and doctor.

Procedure(s): -ALCOHOL &/ DRUG SERVICES; GROUP COUNSELING BY A CLINICIAN x 8 - The patient attended group session from 0900-1100.
 -ALCOHOL AND/OR DRUG SERVICES; CASE MANAGEMENT x 1 - Conducted Case Management to review and update the overall SARP Clinical Record. In addition, reviewed additional services to help assist the patient and to monitor treatment progress and overall service delivered.

Disposition Last Updated by REGIS,JAMES @ 29 Apr 2015 0721 EDT**Released w/o Limitations**

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. -
 Comments: Daniel arrived on time for his Out Patient (OP) group appointment. He is in Week 1, Day 1 of OP Level 1 treatment which meets from 0900-1100, total of 2 hours here at SARP-WNY. Today was Daniels's first day of treatment in group. Daniel did his introduction to the group which consisted of two other members present; as well as performed a check-in exercise and elaborated on his weekend.

During the introductions, Daniel stated that he had recently completed Level III Residential treatment at Fort Belvoir hospital and that he was encouraged by the knowledge and tools that he gained from his stay there. Daniel also stated that he is currently working on designing a video game which is taking up a lot of his time and that he wants to make sure he's addressing this need he has to please other people vs himself.

Daniel seemed determined and anxious to address his need to do things for himself and not others. He looked decisive prepared regarding him sharing the circumstances and events that got him here with the group. Daniel addressed Problem 3, Objectives 1 through 4 of his ITP by attending his group session and abstaining from alcohol/drugs.

Daniel showed no evidence of SI/HI/ATV

Next scheduled appointment for Daniel will be for OP Level 1 on 29th of April 2015 @ 0900

Secondary record maintained at SARP Washington Navy Yard (202) 433-7577.

Signed By REGIS, JAMES (Para-Professional, SARP WNY) @ 29 Apr 2015 0722Co-Signed By BROWN, CYNTHIA E (Paraprofessional) @ 29 Apr 2015 1118

Vitals**Vitals** Written by ERICKSON,NANCY A @ 23 Apr 2015 0855 EDTBP: 122/68, HR: 70, RR: 16, T: 96.0 °F, HT: 5' 9", WT: 160 lbs, BMI: 23.63, BSA: 1.879 square meters
Comments: PT weighed in uniform and boots.**S/O Note** Written by ZEMBRZUSKA,HANNA DOMINIKA @ 23 Apr 2015 1113 EDT**History of present illness**

The Patient is a 30 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

30 y/o single Caucasian man E-6/AD/USN, with approximately 9 ? years continuous active duty service, currently assigned to Navy Information Operations Command (NIOC) at Fort Meade, Maryland with a past psychiatric history of GAD and Alcohol Use Disorder. Pt initially presented to Integrative Care on 16JUN2014 and was diagnosed with GAD and neurotic excoriation (scalp picking when anxious). He was then referred to a LCSW at WRNMMC for therapy and attended therapy sessions until 30OCT2014. He was then command referred to SARP on 17MAR2015 and diagnosed with Alcohol Use Disorder, moderate to severe. SARP referred pt to a 28 day inpatient alcohol rehab at Ft. Belvoir from which the pt was discharged yesterday. SARP would like psychiatrist to evaluate pt for psychotropic medication for his depressed mood, anxiety, and sleep symptoms. Pt reports that every day he experiences either a depressed mood or apathy. He does have moments of happiness when he works on his computer game or cooks, but these moments don't last long. He often wonders what the point of life is and what his purpose in life is. He often worries about the future and tasks he has to complete. He feels that he is always planning and runs through scenarios (good version, bad version) of things in his head. He is frequently irritable, impatient, and judgmental of others. His anxious ruminations lead to initial insomnia. He did sleep well last night, but in rehab he was using Melatonin at bedtime. He has been started on Zoloft, but has not noticed a benefit yet. Denies side effects.

From SARP note: The SM self-referred for SARP evaluation due to his growing concern about his drinking and inability to stop. According to the SM, his alcohol of choice is vodka. He prefers to drink alone at home. His drinking frequency is daily. He reported an increase in his drinking, over the past 8 months, to daily drinking. He described drinking 2 ? 3 self-poured drinks, which has an estimated 4 ounces of alcohol per drink. He described the appeal in terms of the calming effect on his mind, specifically to dampen his anxious ruminations and ?obsessing.? He further reported that drinking helps prepare him for sleep onset (he has had problems with initial insomnia). Clinical interview further revealed evidence for marked tolerance, significant spending on alcohol (\$400 - \$500 per month), hangovers (every other week), being told that he drinks too much (past girlfriends), drinking despite the consistent worsening of his negative mood state, and unsuccessful efforts to reduce/quit drinking. In his personal reflection, he indicated that he does not like himself relative to his drinking and desires to stop. He recognizes that there are multiple triggers to his drinking and usually these involve longstanding feelings of disappointment, frustration, and loneliness. It should be noted that the SM indicated that he has been engaging in painful introspection, particularly regarding his childhood and family life.

Medication list reviewed with patient, reconciliation completed, and list given to patient.

Visit is not deployment-related.

Pain Severity 0 / 10.

Allergies

Current Allergies Reviewed. NKDA.

Current medication

Zoloft 50mg daily started on 26MAR2015

Melatonin for insomnia.

Past medical/surgical history**Reported:**

Recent Events: Medication compliance.

Medical: Reported medical history Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

and psychiatric history

- * THERAPY: multiple visits with clinical social worker, Linda Nilsen, at WRNMMC, between August 2014 and October 2014. She documented Anxiety Disorder, NOS. The SM indicated that he discontinued his participation in treatment due to the limited impact of these visits.

- * MEDS: Denies other medication trials

- * INPATIENT/RESIDENTIAL CARE: Denies psychiatric hospitalizations. Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

- * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior.

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

AR 0894

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Family history:

F: Alcohol use disorder

M: depression

Sister#1: depression, hx of suicide attempts

Sister#2: bipolar disorder, hx of suicide attempts, unknown drug abuse which led to loss of custody of 2 children

Maternal grandmother: bipolar

Personal history

Social history Pt is the oldest of 3 children from a Sacramento, California home, broken by divorce when the SM was a toddler (3-6 y/o). He and his two sisters were raised by their father, whose employment challenges qualified them for welfare. There was also a tumultuous home environment. Father was not involved with his children and was emotionally/physically abusive. Pt felt that he was an inconvenience to his father. Growing up pt had few friends because he would isolate himself. He left his family abruptly, upon graduation from high school, in 2003. Moved out of state and enrolled in college. He found himself ?bored? with college. He enlisted in the Navy in October, 2005, after dropping out of college, working two jobs, and being on the verge of ?living on the street.? There were mounting debts (rent, college tuition, basic apartment furniture) also at the time. He started as an Aviation Boatswain's Mate, then cross-rated in 2009 to Cryptologic Technician ? Network. His duty stations have included USS ESSEX, Pensacola, and NIOC Maryland. He has been very successful in his enlisted service thus far, but has been disenchanted at his current Command because everyone is physically separated and it is not a tight knit command.

Pt was engaged to a Filipino girl he met while stationed overseas, but he ended the engagement in 2010 because she was 'crazy.'
No kids.

Behavioral: Caffeine use 16 oz tea/day and never a smoker / Never Used Tobacco Products.

Alcohol: Not using alcohol Not currently. Discharged yesterday from Ft. Belvoir 28 day Residential Alcohol Treatment.

Subjective**Additional Screening Questions:**

Are you having any thoughts about harming another person? Denies
Do you feel like you are at risk for workplace violence? Denies

PTSD CHECKLIST (PCL-C)

- [2] Repeated, disturbing memories, thoughts, or images of a stressful experience from the past?
- [0] Repeated, disturbing dreams of a stressful experience from the past?
- [0] Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
- [2] Feeling very upset when something reminded you of a stressful experience from the past?
- [2] Having physical reactions (e.g., heart pounding, trouble breathing, or sweating) when something reminded you of a stressful experience from the past?
- [1] Avoid thinking about or talking about a stressful experience from the past or avoid having feelings related to it?
- [1] Avoid activities or situations because they remind you of a stressful experience from the past?
- [0] Trouble remembering important parts of a stressful experience from the past?
- [0] Loss of interest in things that you used to enjoy?
- [0] Feeling distant or cut off from other people?
- [2] Feeling emotionally numb or being unable to have loving feelings for those close to you?
- [0] Feeling as if your future will somehow be cut short?
- [0] Trouble falling or staying asleep?
- [1] Feeling irritable or having angry outbursts?
- [1] Having difficulty concentrating?
- [1] Being 'super alert' or watchful on guard?
- [0] Feeling jumpy or easily startled?

Add point values from each response. Total Score = 13 DATE:

IF you had a positive score on any of the above problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people? [] Not difficult [X] Somewhat difficult [] Very difficult [] Extremely difficult

During the last 2 weeks have you had thoughts that you would be better off dead, or of hurting yourself in some way? [] Yes [X] No

If 'Yes', how often? [] Several days [] More than half the days [] Almost everyday.

Depression Screening:

- [1] 1. Little Interest or pleasure in doing things
- [1] 2. Feeling down depressed or hopeless

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

- [0] 3. Trouble sleeping or sleeping too much
 [1] 4. Feeling tired or little energy
 [0] 5. Poor appetite or overeating
 [0] 6. Feeling bad about self
 [0] 7. Trouble concentrating on things
 [1] 8. Moving or speaking slowly or being restless
 [0] 9. Thoughts that you would be better off dead
 Add point values from each response. Total (PHQ-9) Score = 4

Difficulty doing work, taking care of things at home, or getting along with other people? [] Not at all [X] Somewhat [] Very [] Extremely.

Generalized Anxiety Disorder Screening:

- [1] 1. Feeling nervous, anxious, or on edge
 [1] 2. Not being able to stop or control worrying
 [1] 3. Worrying too much about different things
 [0] 4. Trouble relaxing
 [0] 5. Being so restless that it's hard to sit still
 [2] 6. Becoming easily annoyed or irritable
 [0] 7. Feeling afraid as if something awful might happen

Add point values from each response. Total (GAD-7) Score = 5

Difficulty doing work, taking care of things at home, or getting along with other people? [] Not at all [X] Somewhat [] Very [] Extremely.

Action Taken Based on Risk Assessment:

- ☒ Released without limitations. Advised of emergency procedures.
☐ SM released to Chain of Command with the following limitations:
☐ SM sent to ER for evaluation for admission to inpatient psychiatry
☐ Other:

Therapy

- Duration of the encounter 60 min.

Practice Management

Continue assessment and intervention
 Multi-Disciplinary Treatment Plan:

Treatment Team Members -

Individual Therapist: SARP
 Medication Prescriber: ZEMBRZUSKA
 Group Therapist: MELTON FOR CBT-I

Additional Provider and treatment: SARP at Washington Navy Yard

Date last updated: 23APR2015
 Reviewed with patient on: 23APR2015
 Does patient agree with plan? Yes
 If not, what part?
 Projected date of next treatment plan update: f/u in 3 weeks
 Discussion of assessment and intervention
 Tx Plan cont'd:

Diagnosis

Generalized Anxiety Disorder
 Alcohol Use Disorder, moderate to severe

Active Problem List:

1. Anxiety, worry, irritability
2. Depressed/apathetic mood
3. Insomnia

Long-Term Goals:

1. Improve relationship/increase social support from mother and sister
2. Improve financial knowledge/pay off debts

Discussion of risk of assessment and intervention
 Interventions Provided at this session:

Objective 1 (Corresponds to Goal #): Anxiety, worry, irritability

-

Interventions:

1. Increase Zoloft from 50mg to 75mg daily. Discussed r/b/se.
2. Continue SARP.
3. Will discuss pt being referred for individual therapy for CBT at next session.
4. R/o OCD.

Released w/o Limitations

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. - Comments: Daniel arrived on time for his individual 1-on-1 session with his counselor on Monday 23rd of March 2015 at 08:00.

Daniel was told that his bed was confirmed for him to attend Level 3 Inpatient Treatment at Fort Belvoir Residential Treatment Center in VA. Daniel stated that he is ready to go to treatment; then mentioned that he was unable to reframe from abstaining from alcohol this weekend past weekend. Daniel stated that he had a date on Friday night that stood him up. While there waiting for her at the bar, he felt "upset" and decided to start drinking rum and cokes. After 6 rum and cokes, he decided to stop. Daniel mentioned that that was the 3rd time this week that he's been stood up. He further stated that he went home in a cab and passed out. He also mentioned that he stayed in his apartment the entire weekend and did nothing.

Daniel appeared miserable and fully aware of how different triggers can lead him to start drinking to mask his discontent. Realizing that Daniel does not have the necessary tools to handle these deterrence's, Daniel was asked to use a "feelings chart" to describe how he felt when he was at the bar. Daniel mentioned several to include, frustrated, disappointed, envious (of other couples), idiotic, enraged, jealous, hurt. This exercise made Daniel understand the importance of acknowledging all of the feelings he is going through and to understand that it's not just being "upset".

Daniel has not drunk since Friday night and states that he will abstain from alcohol throughout his treatment. He will check in to Fort Belvoir Level 3 Residential Treatment facilities in VA at 08:30 on Wednesday 25th of March 2015.

Daniel showed no evidence of SI/HI/ATV

Next scheduled appointment for Daniel is upon completion of Level 3 Residential Program at Ft Belvoir.

Secondary record maintained at SARP Washington Navy Yard (202) 433-7577.

60 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

Comments: Daniel arrived on time for his individual 1-on-1 session with his counselor on Friday 20th of March 2015 at 07:30. Daniel was told that his LIP assessment confirmed the recommendation for him to attend Level 3 Inpatient Treatment. Daniel completed the package for admission to Fort Belvoir Residential Treatment Center. Daniel stated that he is ready to go next week. Daniel then mentioned that he's noticed that he is eating more now than when he was drinking and that he was stood up twice this week; both on Tuesday and on Thursday by the same girl which made him feel disappointed and lonely. Daniel also mentioned that he didn't know what he was doing this weekend but that he did have a date for tonight who already knows that he will not be drinking. Daniel appeared bashful and optimistic regarding his willingness to attend treatment next week. When communicating about being stood up this week, Daniel seemed hurt and perplexed. While expressing his disappointment about being stood up, he seemed in disbelief that this happened to him twice. Regarding his abstaining from alcohol, Daniel gives the impression of being very cautious. Daniel will continue to abstain from alcohol throughout his treatment. He was asked to make a weekend plan which included snowboarding and his 1st AA meeting on Saturday and then going to the gym and another AA meeting on Sunday. Daniel showed no evidence of SI/HI/ATV.
 Next scheduled appointment for Daniel is on the 23rd of March 2015 @ 07:30

19 MAR 2015**Psychological Health Evaluation**

IDENTIFYING DATA AND REASON FOR REFERRAL: The Service Member (SM) is a 30-year old, single, Caucasian male, E-6/AD/USN, with approximately 9 ½ years continuous active duty service, currently assigned to Navy Information Operations Command (NIOC) at Fort Meade, Maryland. The SM was seen as a self-referral, based on his concern about his drinking.

CONSENT/PRIVACY: The SM was given an explanation of the nature and purpose of the present evaluation, as well as the limits of confidentiality and he consented to the procedures. He signed the Privacy Act statement on 17 MAR 2015 – a copy is in his secondary (clinic) file.

HISTORY OF PRESENT CONCERNS: The SM self-referred for SARP evaluation due to his growing concern about his drinking and inability to stop. According to the SM, his alcohol of choice is vodka. He prefers to drink alone at home. His drinking frequency is daily. He reported an increase in his drinking, over the past 8 months, to daily drinking. He described drinking 2 – 3 self-poured drinks, which has an estimated 4 ounces of alcohol per drink. He described the appeal in terms of the calming effect on his mind, specifically to dampen his anxious ruminations and “obsessing.” He further reported that drinking helps prepare him for sleep onset (he has had problems with initial insomnia). Clinical interview further revealed evidence for marked tolerance, significant spending on alcohol (\$400 - \$500 per month), hangovers (every other week), being told that he drinks too much (past girlfriends), drinking despite the consistent worsening of his negative mood state, and unsuccessful efforts to reduce/quit drinking. In his personal reflection, he indicated that he does not like himself relative to his drinking and desires to stop. He recognizes that there are multiple triggers to his drinking and usually these involve longstanding feelings of disappointment, frustration, and loneliness. It should be noted that the SM indicated that he has been engaging in painful introspection, particularly regarding his childhood and family life. Over the past couple of years, he has been frustrated in his job (is preparing to leave the Navy at his EAOS in OCT 2015) and disappointed in his romantic life. He reported a longstanding history of intermittent suicidal ideation. He reported a couple of instances of suicide attempts in adolescence. In his adult life, his suicidal ideations, which occur about once per month, might include consideration of various methods, but without intense distress or intent to follow through. He further revealed that the thought of pain associated with any act of self-harm discourages serious consideration of suicide. Additionally, the SM reported that he tends to pick at the hair in particular places on his scalp – he pointed to some visible bald patches at the crown of his head that has become a source of embarrassment to him.

REVIEW OF RECORDS: the SM's AHLTA records were reviewed. SM's record was notable for multiple visits with clinical social worker, Linda Nilsen, at WRNMMC, between August 2014 and October 2014.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

She documented Anxiety Disorder, NOS. The SM indicated that he discontinued his participation in treatment due to the limited impact of these visits.

HISTORY OF HEAD INJURIES AND BLAST EXPOSURE: The SM denied any history of head or concussive injuries.

PSYCHIATRIC HISTORY: Much of his history is reported in sections above. Family history was significant for depression (mother, sister) and Bipolar Disorder (sister, maternal grandmother). SM denied past and present use of illicit substances. He reported abusing his albuterol inhaler during his childhood/adolescence. With regard to conduct problems, the SM described himself as a "good kid," however noted school suspensions due to computer hacking, fighting, and being connected with the presence of stink bombs at school. He denied any past legal problems or history of arrests.

MEDICAL HISTORY: The SM reported a history of asthma during childhood, but also that he had an allergic response to pets, which were kept in the home. He used an inhaler throughout his childhood. At times, he had to be hospitalized due to his asthma response and he estimates that, summed together, he spent a total of about 30 days hospitalized. He reported a problem with recurrent intestinal pain that has not yet been definitively diagnosed. This has been a problem since about age 15 and is tied to having to go to the bathroom. He had PRK performed in 2011. He was not taking any prescription or OTC medications at the time of the evaluation. There were no known drug allergies. He denied use of tobacco products. He reported his consumption of caffeinated beverages in terms of 14 oz. of coffee daily, more on weekends.

PAIN: The SM reported mild dental pain associated with his orthodontic braces. He reported his pain as a 2 on a scale from 0 – 10 (10 = most excruciating; 0 = none).

SOCIAL AND FAMILY HISTORY: The SM was the oldest of 3 children from a Sacramento, California home, broken by divorce when the SM was a toddler. He and his two sisters were raised by their father, whose employment challenges qualified them for welfare. There was also a tumultuous home environment. The SM indicated that he had few friends. He was often by himself; he was absorbed playing with Legos and watching Star Trek. He left his family abruptly, upon graduation from high school, in 2003. He enlisted in the Navy in October, 2005, after dropping out of college, working two jobs, and being on the verge of "living on the street." There were mounting debts also at the time. He started as an Aviation Boatswain's Mate, then cross-rated in 2009 to Cryptologic Technician – Network. His duty stations have included USS ESSEX, Pensacola, and NIOC Maryland. He has been very successful in his enlisted service thus far, but has been disenchanted at his current Command. He expressed an interest in getting out of the Navy and continuing his current line of work as a civilian contractor.

MENTAL STATUS AND BEHAVIORAL OBSERVATIONS: SM was an adequately groomed and dressed, Caucasian male with red hair. He appeared younger than his age of 30. SM was alert and fully oriented. Eye contact was good. He was cooperative with the interview and answered all questions. Behavior and conduct were appropriate to the interview. Affect was subdued, but responsive. He reported his mood as "mixed...crappy...anxious...frustrated." Immediate and remote memory appeared good. Thought processes were clear, coherent, linear, logical, and goal-directed. Speech was of normal rate, rhythm, and volume. There was no evidence for psychosis as indicated by hallucinations, delusions, and bizarre thinking. Intelligence, based on verbal skills and vocabulary, was estimated to be average. Judgment and impulse control appeared intact, without evidence for gross impairment. Treatment motivation was viewed to be good.

PRIMARY FINDINGS: The SM's pattern of drinking meets the criteria for Alcohol Dependence. He is unable to manage or control his drinking and has little confidence that he can discontinue on his own. He appreciates the multiple triggers, usually mood related, that make him vulnerable to resumption of drinking. He will require the high structure and controlled environment of a residential setting. Level III care is therefore indicated. He also presents with prominent psychological concerns – persistent dysphoria with intermittent, mild suicidal ideation. There is an anxiety component, obsessive/ruminative

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

thinking, and compulsions. Trichotillomania may explain his compulsion to pick at his hair (leaving bald patches). A repeat mental health evaluation to specifically address his mood/anxiety symptoms and possible Axis II contributions to his recurrent dysphoria is also appropriate.

SAFETY ISSUES: The Service Member is not currently reporting suicidal or homicidal ideation, intentions, or plans. At present, the Service Member has sufficient ego strength and functional capacity to alert others should he experience a crisis. There are no acute signs of distress presently requiring more extensive suicide risk assessment at this time. Neither is there a need to increase his level of care or restrict autonomy.

FITNESS FOR DUTY AND DISPOSITION: The Service Member is currently psychologically fit for full duty. There is no psychological condition at present that warrants medical board action. The impact of his psychological symptoms described above have largely been associated with distress, to a lesser degree decrements in functioning

DIAGNOSIS:

AXIS I: Alcohol Use Disorder, Moderate – Severe
History of Anxiety Disorder, NOS
R/O Trichotillomania
AXIS II: Cluster C traits
AXIS III: No known contributory physical illnesses
AXIS IV: multiple sources of dissatisfaction
AXIS V: Current GAF: 51

SUMMARY OF FINDINGS AND RECOMMENDATIONS:

1. Based on the available data, the Service Member meets the criteria for Alcohol Dependence.
2. The Service Member is recommended to attend Level III (Residential) treatment, which will afford him the high structure, monitoring, and support required to sustain his abstinence over the course of treatment. His risk of drinking resumption is unacceptably high on an outpatient basis. Level III care will help equip him with the tools/skills he will need to maintain his sobriety and participate meaningfully in his recovery trajectory following completion of residential care.
3. He is to remain abstinent throughout the period of treatment and continuing care.
4. The Service Member is to attend AA meetings at the frequency recommended by the SARP counselor.
5. The Service Member is recommended to resume mental health care at Walter Reed – Bethesda. He will benefit most from a re-evaluation, particularly for psychotropic medication consultation with regard to his mood, anxiety, and sleep symptoms. Cognitive behavioral therapy for insomnia might also be helpful, given his ruminative style.
6. These findings and recommendations were discussed with the SM, who expressed understanding and willingness to comply.

S/O Note Written by NILSEN, LINDA M @ 04 Nov 2014 1357 EST**History of present illness**

The Patient is a 29 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

INITIAL ASSESSMENT 8-4-14: 29 year old SWM Navy, E-6, with 9 years TIS, 2 years at NIOC at Ft Meade. 2 years to go, not sure if he wants to stay in - will have to stay in or some time due to braces on teeth. Self referral. Patient believes that his family of origin is impacting on how he relates to others now that he is an adult. During the past month, he has experienced the following symptoms: anxiety or worries and difficulty concentrating. Patient "picks" at his scalp. Has several dry patches where he has scraped/picked the hair out in circles. He has been doing this since 2009. He thinks it is a combination of dry skin and his picking at the scalp.

Nutrition: tries to eat healthy, goes out 1 X a week, has some family issues - father is large, has diabetes - does not want to turn out like him

Insomnia Severity Index: 8/28 Patient has a hard time getting to sleep, at times it takes 2 hrs. He wakes up during the night when he has something on his mind. If he listens to rain and storms it helps him sleep better.

Abuse: Father was physically abusive of sisters more so than with him. Dad also shaved patient's head when he was 17 because he thought Sm's hair was too long. Patient was allergic to animals, Father kept cats and dogs. SM used emergency inhaler 3 or 4 X a day.

Goals he would like to deal with: 1.) anxiety, 2.) past issues - family abuse (verbal, physical), 3.) new way of handling issues - rather than ignore them.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

10-30-14: Follow-up appointment for patient being seen for adjustment disorder and anxiety disorder. Patient arrived on time. Patient stated that his sleep is not good. He wakes up in the middle of the night and sometimes has a hard time going back to sleep. Over the weekend, he had a date with a woman who lives in Harrisburg, PA. While he was in the area, he also tried to look up a woman he dated several years ago. He is trying to accept other's points of view. He did not find the one, and the other didn't turn out. One of his main concerns with women he dates, is he needs alone time to do his own thing (computer programming mainly).

Visit is deployment-related Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009 Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009.

Pain Severity 0 / 10 Pain Severity 0 / 10.

and psychiatric history

- * THERAPY: Fleet and Family Aug 2012 for 4 or 5 months
- * MEDS: none
- * INPATIENT/RESIDENTIAL CARE: denied
- * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: in H/S, swallowed a whole bottle of aspirin - felt sick, never told anyone
- * FPMH: sister is bi-polar, other sister depressed. Mom and grandmother are bi-polar. Father is obese, diabetic, alcoholic? - drinks every other or every night - has not seen him since 2009 so is not sure how he is doing

Personal history

Social history Born and raised in Riverside, CAL. Dad was in military for 2 years. SM is 29, sisters are 27 and 26. All full siblings. Parents divorced when he was 2 or 3. Dad got full custody immediately. He didn't want mother to ever see them.

Mother left bruises on his sister. Lost full custody. Dad was really more abusive. Age 8, got step-mother, they were together for 10 years. Step-mother later told patient that she stayed with their father for their sakes as long as she could. Before their divorce, father started seeing his next wife. Brought her to patient's track events. Dad got divorced from her about 1 yr ago. SM lived in Cal until 14.

EDUCATION/MILITARY: H/S in NJ. Really awful, started Freshman yr at one school, then they moved again during that yr. He lost most of his credits that yr. Got along at school because he was a runner. 2.2 GPA, no scholarships. Worked during the school yr and summers. Rented a room from his step-mom (told his dad he was going away to school). Lived with her for 2 yrs and went to college for 1 semester. Drinking lots, dating crazies, decided to join the military. Planned on making a career of the military, not sure now. Doesn't want to move anymore.

ADULT RELATIONSHIPS: never married, no children. Last relationship - Kristina, age 29. They have been together 6 months, living together 4 months. Her lease was up so they moved in together. He thinks he wants to break up with her. She doesn't want to talk about anything. The relationship before this one lasted 2 years. The first 6 months were good. The rest of the time was rocky. They started out as house mates. She had drinking problems. He tried to help by not drinking either. She spent the rest of the time hiding her drinking. She also was taking anti-depressants and didn't tell him.

SPIRITUAL: none

Behavioral: Caffeine use 20 oz a day of coffee - sometimes more 20 oz a day of coffee - sometimes more. Tobacco use current smoker Used to smoke hooka when overseas - Amt per Day: Used to smoke hooka when overseas - Amt per Day: Alcohol: Alcohol use Liquor - 1-3 drinks, 1 or 2 X a week if liquor in fridge, 6 or more drinks one time or less a month, trying to cut down Liquor - 1-3 drinks, 1 or 2 X a week if liquor in fridge, 6 or more drinks one time or less a month, trying to cut down.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Do you feel like you are at risk for workplace violence? denied

PTSD CHECKLIST (PCL-C)

- ☐ Repeated, disturbing memories, thoughts, or images of a stressful experience from the past?
☐ Repeated, disturbing dreams of a stressful experience from the past?
☐ Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
☐ Feeling very upset when something reminded you of a stressful experience from the past?
☐ Having physical reactions (e.g., heart pounding, trouble breathing, or sweating) when something reminded you of a stressful experience from the past?
☐ Avoid thinking about or talking about a stressful experience from the past or avoid having feelings related to it?
☐ Avoid activities or situations because they remind you of a stressful experience from the past?
☐ Trouble remembering important parts of a stressful experience from the past?
☐ Loss of interest in things that you used to enjoy?
☐ Feeling distant or cut off from other people?
☐ Feeling emotionally numb or being unable to have loving feelings for those close to you?
☐ Feeling as if your future will somehow be cut short?
☐ Trouble falling or staying asleep?
☐ Feeling irritable or having angry outbursts?
☐ Having difficulty concentrating?
☐ Being
'super alert
'or watchful on guard?
☐ Feeling jumpy or easily startled?

Add point values from each response. Total Score = 0 DATE: 8-4-14

IF you had a positive score on any of the above problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people? ☐ Not difficult ☐ Somewhat difficult ☐ Very difficult ☐ Extremely difficult

During the last 2 weeks have you had thoughts that you would be better off dead, or of hurting yourself in some way? ☐ Yes ☐ No

If

'Yes

how often? ☐ Several days ☐ More than half the days ☐ Almost everyday.

Depression Screening:

- ☐ 1. Little interest or pleasure in doing things
☐ 2. Feeling down depressed or hopeless
☐ 3. Trouble sleeping or sleeping too much
☐ 4. Feeling tired or little energy
☐ 5. Poor appetite or overeating
☐ 6. Feeling bad about self
☐ 7. Trouble concentrating on things
☐ 8. Moving or speaking slowly or being restless
☐ 9. Thoughts that you would be better off dead

Add point values from each response. Total (PHQ-9) Score = 7/27 on 8-4-14

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☒ Somewhat ☐ Very ☐ Extremely.

Generalized Anxiety Disorder Screening:

- ☐ 1. Feeling nervous, anxious, or on edge
☐ 2. Not being able to stop or control worrying
☐ 3. Worrying too much about different things
☐ 4. Trouble relaxing
☐ 5. Being so restless that it
's hard to sit still
☐ 6. Becoming easily annoyed or irritable
☐ 7. Feeling afraid as if something awful might happen

Add point values from each response. Total (GAD-7) Score = 12/27 on 8-4-14

It is very difficult for him to do his work, take care of things at home, or get along with other people

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☐ Somewhat ☐ Very ☐ Extremely.

Physical findings**General Appearance:**

° Alert. ° Well developed. ° Well nourished. ° In no acute distress.

Diagnosis

I. 300.00 Anxiety D/O NOS

II. 799.9 deferred

III. none

IV. Limited support system, few friends

V. current GAF: 65

Active Problem List:

1. Anxiety

2. Relationship problems

Long-Term Goals:

1. Reduce overall frequency, intensity, and duration of the anxiety so that daily functioning is not impaired.

2. Develop the necessary skills for effective, open communication

Discussion of risk of assessment and intervention

Interventions Provided at this session:

supportive therapy

Objective 1 (Corresponds to Goal #1):

- The patient will learn, and by self-report, implement skills to reduce overall anxiety and manage anxiety symptoms.

Interventions:

1. Establish rapport with the client toward building a therapeutic alliance.

Objective 2 (Corresponds to Goal #2):

- By self report, increase the frequency of the direct expression of honest, respectful, and positive feelings and thoughts within relationships.

Interventions:

1. Help patient review any new relationships for possible problems.

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

S/O Note Written by NILSEN, LINDA M @ 24 Oct 2014 0907 EDT**History of present illness**

The Patient is a 29 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

INITIAL ASSESSMENT 8-4-14: 29 year old SWM Navy, E-6, with 9 years TIS, 2 years at NIOC at Ft Meade. 2 years to go, not sure if he wants to stay in - will have to stay in or some time due to braces on teeth. Self referral. Patient believes that his family of origin is impacting on how he relates to others now that he is an adult. During the past month, he has experienced the following symptoms: anxiety or worries and difficulty concentrating. Patient "picks" at his scalp. Has several dry patches where he has scraped/picked the hair out in circles. He has been doing this since 2009. He thinks it is a combination of dry skin and his picking at the scalp.

Nutrition: tries to eat healthy, goes out 1 X a week, has some family issues - father is large, has diabetes - does not want to turn out like him

Insomnia Severity Index: 8/28 Patient has a hard time getting to sleep, at times it takes 2 hrs. He wakes up during the night when he has something on his mind. If he listens to rain and storms it helps him sleep better.

Abuse: Father was physically abusive of sisters more so than with him. Dad also shaved patient's head when he was 17 because he thought Sm's hair was too long. Patient was allergic to animals, Father kept cats and dogs. SM used emergency inhaler 3 or 4 X a day.

Goals he would like to deal with: 1.) anxiety, 2.) past issues - family abuse (verbal, physical), 3.) new way of handling issues - rather than ignore them.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

10-23-14: Follow-up appointment for patient being seen for adjustment disorder and anxiety disorder. Patient arrived on time. Patient is re-enlisting for another 4 years. His family (Mom, sister, sister's child and brother) are coming to the event on Dec 12. They are staying at his house. He is not close to his family, but is working on getting closer. Patient is also going home for Christmas. He feels guilty and anxious about them. He feels guilty because if other people knew how little he sees them, they would think less of him. After his parents divorced, he rarely saw his Mom. He says he has probably seen her in total about a year since the divorce. His mother is bi-polar. She has been in therapy in the past. Her mother is also bi-polar and takes meds. Patient likes his mom's side of the family. They were nice to him when he was a child. His grandfather taught him Doss, other computer stuff, and played video games with him. He has not seen his dad for 5 years. Dad now has another family and lives in Cal. Dad's brother was in jail for having sex with an under-aged girlfriend. He was about 20 years older than her and was married at the time. His other brother is disabled and lives with their mom. He is mean. The grandmother is mean too. When he was a child, he stayed with them for several weeks at a time. (He visited his mom for about 2 weeks a summer.) Patient states that his sister seems to have inherited the worst parts of both families-she is bi-polar and is the same kind of mean as his father's mother.

Visit is deployment-related Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009 Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009.

Pain Severity 0 / 10 Pain Severity 0 / 10.

Current medication

See ALTHA, per patient, none

Past medical/surgical history**Reported:**

Medical: Reported medical history
See ALTHA

and psychiatric history

- * THERAPY: Fleet and Family Aug 2012 for 4 or 5 months
- * MEDS: none
- * INPATIENT/RESIDENTIAL CARE: denied
- * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: in H/S, swallowed a whole bottle of aspirin - felt sick, never told anyone
- * FPMH: sister is bi-polar, other sister depressed. Mom and grandmother are bi-polar. Father is obese, diabetic, alcoholic? - drinks every other or every night - has not seen him since 2009 so is not sure how he is doing

Personal history

Social history Born and raised in Riverside, CAL, Dad was in military for 2 years. SM is 29, sisters are 27 and 26. All full siblings. Parents divorced when he was 2 or 3. Dad got full custody immediately. He didn't want mother to ever see them.

Mother left bruises on his sister. Lost full custody. Dad was really more abusive. Age 8, got step-mother, they were together for 10 years. Step-mother later told patient that she stayed with their father for their sakes as long as she could. Before their divorce, father started seeing his next wife. Brought her to patient's track events. Dad got divorced from her about 1 yr ago. SM lived in Cal until 14.

EDUCATION/MILITARY: H/S in NJ. Really awful, started Freshman yr at one school, then they moved again during that yr. He lost most of his credits that yr. Got along at school because he was a runner. 2.2 GPA, no scholarships. Worked during the school yr and summers. Rent a room from his step-mom (told his dad he was going away to school). Lived with her for 2 yrs and went to college for 1 semester. Drinking lots, dating crazies, decided to join the military. Planned on making a career of the military, not sure now. Doesn't want to move anymore.

ADULT RELATIONSHIPS: never married, no children. Last relationship - Kristina, age 29. They have been together 6 months, living together 4 months. Her lease was up so they moved in together. He thinks he wants to break up with her. She doesn't want to talk about anything. The relationship before this one lasted 2 years. The first 6 months were good. The rest of the time was rocky. They started out as house mates. She had drinking problems. He tried to help by not drinking either. She spent the rest of the time hiding her drinking. She also was taking anti-depressants and didn't tell him.

SPIRITUAL: none

Behavioral: Caffeine use 20 oz a day of coffee - sometimes more 20 oz a day of coffee - sometimes more. Tobacco use current smoker Used to smoke hooka when overseas - Amt per Day: Used to smoke hooka when overseas - Amt per Day:

Additional Screening Questions:

Are you having any thoughts about harming another person? denied

Do you feel like you are at risk for workplace violence? denied

Additional Screening Questions:

Are you having any thoughts about harming another person? denied

Do you feel like you are at risk for workplace violence? denied

PTSD CHECKLIST (PCL-C)

- ☐ Repeated, disturbing memories, thoughts, or images of a stressful experience from the past?
- ☐ Repeated, disturbing dreams of a stressful experience from the past?
- ☐ Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
- ☐ Feeling very upset when something reminded you of a stressful experience from the past?
- ☐ Having physical reactions (e.g., heart pounding, trouble breathing, or sweating) when something reminded you of a stressful experience from the past?
- ☐ Avoid thinking about or talking about a stressful experience from the past or avoid having feelings related to it?
- ☐ Avoid activities or situations because they remind you of a stressful experience from the past?
- ☐ Trouble remembering important parts of a stressful experience from the past?
- ☐ Loss of interest in things that you used to enjoy?
- ☐ Feeling distant or cut off from other people?
- ☐ Feeling emotionally numb or being unable to have loving feelings for those close to you?
- ☐ Feeling as if your future will somehow be cut short?
- ☐ Trouble falling or staying asleep?
- ☐ Feeling irritable or having angry outbursts?
- ☐ Having difficulty concentrating?
- ☐ Being 'super alert' or watchful on guard?
- ☐ Feeling jumpy or easily startled?

Add point values from each response. Total Score = 0 DATE: 8-4-14

IF you had a positive score on any of the above problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people? ☐ Not difficult ☐ Somewhat difficult ☐ Very difficult ☐ Extremely difficult

During the last 2 weeks have you had thoughts that you would be better off dead, or of hurting yourself in some way? ☐ Yes ☐ No

If

Yes

, how often? ☐ Several days ☐ More than half the days ☐ Almost everyday.

Depression Screening:

- ☐ 1. Little Interest or pleasure in doing things
- ☐ 2. Feeling down depressed or hopeless
- ☐ 3. Trouble sleeping or sleeping too much
- ☐ 4. Feeling tired or little energy
- ☐ 5. Poor appetite or overeating
- ☐ 6. Feeling bad about self
- ☐ 7. Trouble concentrating on things
- ☐ 8. Moving or speaking slowly or being restless
- ☐ 9. Thoughts that you would be better off dead

Add point values from each response. Total (PHQ-9) Score = 7/27 on 8-4-14

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☒ Somewhat ☐ Very ☐ Extremely.

Generalized Anxiety Disorder Screening:

- ☐ 1. Feeling nervous, anxious, or on edge
- ☐ 2. Not being able to stop or control worrying
- ☐ 3. Worrying too much about different things
- ☐ 4. Trouble relaxing
- ☐ 5. Being so restless that it's hard to sit still

Therapy

- Duration of the encounter 60 min.

Practice Management

Continue assessment and intervention
 Multi-Disciplinary Treatment Plan:

Treatment Team Members -

Individual Therapist: L Nilsen, LCSW-C

Date last updated: 9-11-14

Reviewed with patient on: 9-11-14

Does patient agree with plan? yes

If not, what part?

Projected date of next treatment plan update: 12-11-14

Discussion of assessment and intervention

Tx Plan cont~"d:

Diagnosis

I. 300.00 Anxiety D/O NOS

II. 799.9 deferred

III. none

IV. Limited support system, few friends

V. current GAF: 65

Active Problem List:

1. Anxiety
2. Relationship problems

Long-Term Goals:

1. Reduce overall frequency, intensity, and duration of the anxiety so that daily functioning is not impaired.
2. Develop the necessary skills for effective, open communication

Discussion of risk of assessment and intervention

Interventions Provided at this session:

supportive therapy

Objective 1 (Corresponds to Goal #1):

- The patient will learn, and by self-report, implement skills to reduce overall anxiety and manage anxiety symptoms.

Interventions:

1. Establish rapport with the client toward building a therapeutic alliance.

Objective 2 (Corresponds to Goal #2):

- By self report, increase the frequency of the direct expression of honest, respectful, and positive feelings and thoughts within relationships.

Interventions:

1. Help patient review any new relationships for possible problems.

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

S/O Note Written by NILSEN,LINDA M @ 16 Oct 2014 0958 EDT**History of present illness**

The Patient is a 29 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

INITIAL ASSESSMENT 8-4-14: 29 year old SWM Navy, E-6, with 9 years TIS, 2 years at NIOC at Ft Meade. 2 years to go, not sure if he wants to stay in - will have to stay in or some time due to braces on teeth. Self referral. Patient believes that his family of origin is impacting on how he relates to others now that he is an adult. During the past month, he has experienced the following symptoms: anxiety or worries and difficulty concentrating. Patient "picks" at his scalp. Has several dry patches where he has scraped/picked the hair out in circles. He has been doing this since 2009. He thinks it is a combination of dry skin and his picking at the scalp.

Nutrition: tries to eat healthy, goes out 1 X a week, has some family issues - father is large, has diabetes - does not want to turn out like him

Insomnia Severity Index: 8/28 Patient has a hard time getting to sleep, at times it takes 2 hrs. He wakes up during the night when he has something on his mind. If he listens to rain and storms it helps him sleep better.

Abuse: Father was physically abusive of sisters more so than with him. Dad also shaved patient's head when he was 17 because he thought Sm's hair was too long. Patient was allergic to animals, Father kept cats and dogs. SM used emergency inhaler 3 or 4 X a day.

Goals he would like to deal with: 1.) anxiety, 2.) past issues - family abuse (verbal, physical), 3.) new way of handling issues - rather than ignore them.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

10-16-14: Follow-up appointment for patient being seen for adjustment disorder and anxiety disorder. Patient arrived on time. Pt saw his PCM who excused his PTR, but did not fill out the paper for his regular PT. His ankle is still giving him trouble. He said that she was rude. When asked if he told her, he said no, he does not confront people. He learned as a child to just deal with whatever is going on. He was at sea the first 3 years in the Navy, stationed by Japan. They were on 12 hr shifts, not much down time. He tried to be the "perfect" worker-did his job the best that he could. He does believe this is where some of his anxiety came from. He started pulling his hair out during this time. So he has continued to put up with bad behavior. I encouraged him to tell the providers he finds them rude. He talked about his problems with reading and writing. In the past he has not been able to do well in school. He can handle books on tape and videos. It sounds like he might have a learning disability. We discussed ways he could work around this and on it. Patient stated he is going home to his mom's for X-mas. He said that he jokingly said that they needed to find some girlfriend possibilities for him. He said he was joking, but they have already found someone for him to meet.

Visit is deployment-related Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009 Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009.

Pain Severity 0 / 10 Pain Severity 0 / 10.

and psychiatric history

- * THERAPY: Fleet and Family Aug 2012 for 4 or 5 months
- * MEDS: none
- * INPATIENT/RESIDENTIAL CARE: denied
- * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: in H/S, swallowed a whole bottle of aspirin - felt sick, never told anyone
- * FPMH: sister is bi-polar, other sister depressed. Mom and grandmother are bi-polar. Father is obese, diabetic, alcoholic? - drinks every other or every night - has not seen him since 2009 so is not sure how he is doing

Personal history

Social history Born and raised in Riverside, CAL. Dad was in military for 2 years. SM is 29, sisters are 27 and 26. All full siblings.

Parents divorced when he was 2 or 3. Dad got full custody immediately. He didn't want mother to ever see them.

Mother left bruises on his sister. Lost full custody. Dad was really more abusive. Age 8, got step-mother, they were together for 10 years. Step-mother later told patient that she stayed with their father for their sakes as long as she could. Before their divorce, father started seeing his next wife. Brought her to patient

's track events. Dad got divorced from her about 1 yr ago. SM lived in Cal until 14.

EDUCATION/MILITARY: H/S in NJ. Really awful, started Freshman yr at one school, then they moved again during that yr. He lost most of his credits that yr. Got along at school because he was a runner. 2.2 GPA, no scholarships. Worked during the school yr and summers. Rented a room from his step-mom (told his dad he was going away to school). Lived with her for 2 yrs and went to college for 1 semester. Drinking lot, dating crazies, decided to join the military. Planned on making a career of the military, not sure now. Doesn't want to move anymore.

ADULT RELATIONSHIPS: never married, no children. Last relationship - Kristina, age 29. They have been together 6 months, living together 4 months. Her lease was up so they moved in together. He thinks he wants to break up with her. She doesn't want to talk about anything. The relationship before this one lasted 2 years. The first 6 months were good. The rest of the time was rocky. They started out as house mates. She had drinking problems. He tried to help by not drinking either. She spent the rest of the time hiding her drinking. She also was taking anti-depressants and didn't tell him.

SPIRITUAL: none

Behavioral: Caffeine use 20 oz a day of coffee - sometimes more 20 oz a day of coffee - sometimes more. Tobacco use current smoker Used to smoke hooka when overseas - Amt per Day: Used to smoke hooka when overseas - Amt per Day:

Alcohol: Alcohol use Liquor - 1-3 drinks, 1 or 2 X a week if liquor in fridge, 6 or more drinks one time or less a month, trying to cut

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

down Liquor - 1-3 drinks, 1 or 2 X a week if liquor in fridge, 6 or more drinks one time or less a month, trying to cut down.

Subjective**Additional Screening Questions:**

Are you having any thoughts about harming another person? denied

Do you feel like you are at risk for workplace violence? denied

Additional Screening Questions:

Are you having any thoughts about harming another person? denied

Do you feel like you are at risk for workplace violence? denied

PTSD CHECKLIST (PCL-C)

- ☐ Repeated, disturbing memories, thoughts, or images of a stressful experience from the past?
- ☐ Repeated, disturbing dreams of a stressful experience from the past?
- ☐ Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
- ☐ Feeling very upset when something reminded you of a stressful experience from the past?
- ☐ Having physical reactions (e.g., heart pounding, trouble breathing, or sweating) when something reminded you of a stressful experience from the past?
- ☐ Avoid thinking about or talking about a stressful experience from the past or avoid having feelings related to it?
- ☐ Avoid activities or situations because they remind you of a stressful experience from the past?
- ☐ Trouble remembering important parts of a stressful experience from the past?
- ☐ Loss of interest in things that you used to enjoy?
- ☐ Feeling distant or cut off from other people?
- ☐ Feeling emotionally numb or being unable to have loving feelings for those close to you?
- ☐ Feeling as if your future will somehow be cut short?
- ☐ Trouble falling or staying asleep?
- ☐ Feeling irritable or having angry outbursts?
- ☐ Having difficulty concentrating?
- ☐ Being
'super alert
' or watchful on guard?
- ☐ Feeling jumpy or easily startled?

Add point values from each response. Total Score = 0 DATE: 8-4-14

If you had a positive score on any of the above problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people? ☐ Not difficult ☐ Somewhat difficult ☐ Very difficult ☐ Extremely difficultDuring the last 2 weeks have you had thoughts that you would be better off dead, or of hurting yourself in some way? ☐ Yes ☐ No

If

'Yes

, how often? ☐ Several days ☐ More than half the days ☐ Almost everyday.**Depression Screening:**

- ☐ 1. Little Interest or pleasure in doing things
- ☐ 2. Feeling down depressed or hopeless
- ☐ 3. Trouble sleeping or sleeping too much
- ☐ 4. Feeling tired or little energy
- ☐ 5. Poor appetite or overeating
- ☐ 6. Feeling bad about self
- ☐ 7. Trouble concentrating on things
- ☐ 8. Moving or speaking slowly or being restless
- ☐ 9. Thoughts that you would be better off dead

Add point values from each response. Total (PHQ-9) Score = 7/27 on 8-4-14

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☒ Somewhat ☐ Very ☐ Extremely.**Generalized Anxiety Disorder Screening:**

- ☐ 1. Feeling nervous, anxious, or on edge
- ☐ 2. Not being able to stop or control worrying
- ☐ 3. Worrying too much about different things
- ☐ 4. Trouble relaxing
- ☐ 5. Being so restless that it's hard to sit still
- ☐ 6. Becoming easily annoyed or irritable

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

[0] 7. Feeling afraid as if something awful might happen

Add point values from each response. Total (GAD-7) Score = 12/27 on 8-4-14

It is very difficult for him to do his work, take care of things at home, or get along with other people

Difficulty doing work, taking care of things at home, or getting along with other people? [] Not at all [] Somewhat [] Very [] Extremely.

Physical findings**General Appearance:**

° Alert. ° Well developed. ° Well nourished. ° In no acute distress.

Neurological:

° No disorientation was observed, oriented x3, oriented x3. ° No hallucinations. ° Memory was unimpaired. ° Remote memory was not impaired. ° Recent memory was not impaired. ° Judgement was not impaired.

Speech: ° Normal, regular rate, non-pressured. , regular rate, non-pressured. ° Rate was not slowed. ° Not pressured. ° Tone was not a monotone.

Psychiatric:

Demonstrated Behavior: ° Behavior demonstrated no abnormalities - appropriate and cooperative - appropriate and cooperative. ° No psychomotor retardation. ° Behavior demonstrated no psychomotor agitation. ° No decreased eye-to-eye contact was observed.

Mood: ° Euthymic. ° Not depressed. ° Not anxious.

Affect: ° Normal. ° Not labile. ° Not flat. ° Not constricted. ° Showed no irritability.

Thought Processes: ° Not impaired, they were linear, logical, and goal directed, they were linear, logical, and goal directed.

° Attention demonstrated no abnormalities. ° Attention span was not decreased.

Thought Content: ° Insight was intact. ° No delusions. ° No suicidal ideation. ° No suicidal plans. ° No suicidal intent. ° No homicidal ideations. ° No homicidal plans. ° No homicidal intent.

Therapy

- Duration of the encounter 60 min.

Practice Management

Continue assessment and intervention
 Multi-Disciplinary Treatment Plan:

Treatment Team Members -

Individual Therapist: L Nilsen, LCSW-C

Date last updated: 9-11-14
 Reviewed with patient on: 9-11-14
 Does patient agree with plan? yes
 If not, what part?
 Projected date of next treatment plan update: 12-11-14

Discussion of assessment and intervention
 Tx Plan cont~"d:

Diagnosis

- I. 300.00 Anxiety D/O NOS
- II. 799.9 deferred
- III. none
- IV. Limited support system, few friends
- V. current GAF: 65

Active Problem List:

1. Anxiety
2. Relationship problems

Long-Term Goals:

1. Reduce overall frequency, intensity, and duration of the anxiety so that daily functioning is not impaired.
2. Develop the necessary skills for effective, open communication

Discussion of risk of assessment and intervention

Interventions Provided at this session:

supportive therapy

Objective 1 (Corresponds to Goal #1):

- The patient will learn, and by self-report, implement skills to reduce overall anxiety and manage anxiety symptoms.

Interventions:

1. Establish rapport with the client toward building a therapeutic alliance.

Objective 2 (Corresponds to Goal #2):

- By self report, increase the frequency of the direct expression of honest, respectful, and positive feelings and thoughts within relationships.

Interventions:

1. Help patient review any new relationships for possible problems.

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

PCM _ NP Austin, out of office this week.

RelayHealth sent to patient -

NP Austin is out of the office this week, so I am looking at her lab & xray results.

Below are copies of your recent MRI's, showing evidence of a prior lateral (the outside of the ankle) ankle sprain and, also, mild degenerative changes over the "bunion" area of your foot.

This is just a "FYI". Please keep your pending appointments with NP Austin 10/20/14 and with Physical Therapy 11/4/14, at which times you can review the results again, if needed.

v/r
Dr. Rinis

HISTORY: Continuous pain following injury

COMPARISONS:
 Left foot and ankle radiographs dated 5/6/14

TECHNIQUE:
 WRNMMC MRI of the left ankle was performed utilizing standard imaging sequences (3 plane localizer, axial T1, axial PD fat-sat, coronal T1, coronal PD fat-sat, sagittal T1, sagittal PD fat-sat). No intravenous or intra-articular contrast was administered. Subsequently, MRI of the forefoot was obtained to include 3 plane localizer, coronal T1, coronal PD fat-sat, axial T1, sagittal T1, axial PD fat-sat, sagittal PD fat-sat.

FINDINGS:
 ANKLE: A skin marker was placed along the anterolateral aspect of the lower leg at the site of symptoms.

Plantar aponeurosis: within normal limits.

Tendons Achilles' tendon: within normal limits.

Peroneal tendons: within normal limits.

Flexor tendons:
 Apart from minimal fluid accumulation at the knot of Henry, the flexor tendons about the ankle are otherwise within normal limits.

Extensor tendons: within normal limits.

Ligaments:
 Syndesmotc ankle ligaments: within normal limits.

Low lateral ankle ligaments:
 The anterior talofibular ligament appears thickened. Calcaneofibular and posterior talofibular ligaments are within normal limits.

Deltoid ligamentous complex: within normal limits.

Spring ligamentous complex: within normal limits.

Lisfranc ligament: within normal limits.

Sinus tarsi and tarsal tunnel: within normal limits.

Muscle morphology and signal intensity: within normal limits.

Bone morphology and signal intensity: within normal limits.

Chondral surfaces: within normal limits.

FOREFOOT:
 Tendons: Distal peroneal tendons: within normal limits.

Distal flexor tendons: within normal limits.

Distal extensor tendons: within normal limits.

Ligaments:
 Intermetatarsal ligaments: within normal limits.

Lisfranc ligament: within normal limits.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

The plantar plate and capsular ligamentous structures about the metatarsal phalangeal and interphalangeal joints of the forefoot are within normal limits.

Recesses and Bursae:

No evidence of Morton's neuroma or intermetatarsal bursitis.

Muscle morphology and signal intensity: within normal limits.

Bone morphology and signal intensity:

Mild degenerative changes are seen at the 1st metatarsophalangeal joint.

IMPRESSION:

Findings suggestive of prior lateral ankle sprain.

From Daniel Merwin To Ms. Marie Austin, NPP Provider Ms. Marie Austin NPP Patient Daniel Merwin Sent Date Sep 30, 2014 8:53 AM Subject Medical Waiver - Foot Details Message I was in to have my ankle looked at and medical waiver signed. Two signatures were missed. I will be at Walter Reed in the morning on 02 October 2014 for another appointment. I will stop by with the paper work. The MRI is scheduled for Sunday October 5th, 2014 and the follow up with Austin, Marie is set for 20 October 2014. A note on my foot. It was definitely swollen yesterday around the area of pain. I was actually able to purposely hurt it along with making a popping/grinding sound when I rotated my ankle within its normal range of motion. I discovered it when I accidentally stretched my ankle when lying in bed. So I decided to test it by pointing my toe forward and then rotating it in 360 degrees, each revolution made a sound or two and increased the pain. The pain lasted through the night and still exists this morning at a level of about 3.

Copy of Anxiety & Depression Screening Taken On: 26 Sep 2014

1. Over the last 2 weeks, how often have you been bothered by feeling nervous, anxious, or on edge?: Nearly every day
2. Over the last 2 weeks, how often have you been bothered by not being able to stop or control worrying?: Nearly every day
3. Over the last 2 weeks, how often have you been bothered by feeling down, depressed or hopeless?: Not at all
4. Over the last 2 weeks, how often have you been bothered by having little interest or pleasure in doing things?: Not at all
5. Over the last 2 weeks, how often have you been bothered by the thoughts that you would be better off dead or hurting yourself in some way?: Not at all

S/O Note Written by AUSTIN, MARIE @ 02 Oct 2014 0801 EDT**Chief complaint**

The Chief Complaint is: Scalp issues, PT referral for left ankle and PRT waiver.

History of present illness

The Patient is a 29 year old male.

<<Note accomplished in TSWF-CORE>>

PO1 needed a PARFQ and PRT waiver as a result of injured he sustained in April of 2014. Initial injury occurred while he was running and stepped into a hole hyperextending his foot. He was seen in the ER with a negative xray r/o a fx. He continued to have increased swelling and pain and was seen and x rayed again no fx seen. He then was sent for traing and has returned to WR and underwent PT. There is some improvement in pain. However he continues to have pain and swelling over the medial malleolus and is unable to run or walk fast.

PMH is positive for several stress fx in the foot in his young adult years.

Patient is compliant with medications.

Current medication

Motrin but no OTC meds, vitamins, herbals, etc.

Past medical/surgical history**Reported:**

Medical: Reported medical history Ankl pain

Surgical / Procedural: Surgical / procedural history
 none.

Personal history

Social history reviewed No tob no etoh.

Family history

Family medical history
 Noncontributory.

Review of systems**Systemic:** No fever, no chills, and no recent weight loss.**Head:** No headache.**Otolaryngeal:** No earache, no nasal discharge, no nasal passage blockage (stuffiness), and no sore throat.**Cardiovascular:** No chest pain or discomfort.

S/O Note Written by NILSEN, LINDA M @ 16 Oct 2014 0822 EDT**History of present illness**

The Patient is a 29 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

INITIAL ASSESSMENT 8-4-14: 29 year old SWM Navy, E-6, with 9 years TIS, 2 years at NIOC at Ft Meade. 2 years to go, not sure if he wants to stay in - will have to stay in or some time due to braces on teeth. Self referral. Patient believes that his family of origin is impacting on how he relates to others now that he is an adult. During the past month, he has experienced the following symptoms: anxiety or worries and difficulty concentrating. Patient "picks" at his scalp. Has several dry patches where he has scraped/picked the hair out in circles. He has been doing this since 2009. He thinks it is a combination of dry skin and his picking at the scalp.

Nutrition: tries to eat healthy, goes out 1 X a week, has some family issues - father is large, has diabetes - does not want to turn out like him

Insomnia Severity Index: 8/28 Patient has a hard time getting to sleep, at times it takes 2 hrs. He wakes up during the night when he has something on his mind. If he listens to rain and storms it helps him sleep better.

Abuse: Father was physically abusive of sisters more so than with him. Dad also shaved patient's head when he was 17 because he thought Sm's hair was too long. Patient was allergic to animals, Father kept cats and dogs. SM used emergency inhaler 3 or 4 X a day.

Goals he would like to deal with: 1.) anxiety, 2.) past issues - family abuse (verbal, physical), 3.) new way of handling issues - rather than ignore them.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

9-25-14: Follow-up appointment for patient being seen for adjustment disorder and anxiety disorder. Patient arrived on time. Patient saw a physical therapist yesterday. He has been having problems with his left ankle since April 2014. He wanted to get light limited duty. He found out after he got there that only his PCM can issue light limited duty. They did give him a brace to help immobilize the ankle. He is working on his list of serious dating potentials. So far he has decided he does not want kids and does want someone who is OK with he doing things he likes to do (like computer work for long periods of time). Focus on sleep problems - mainly getting to sleep. It takes him 1 - 2 hours to get to sleep each night. His mind is very active. He thinks about problems he wants to solve, etc. If he stops thinking about one problem, he starts thinking about another problem. This writer suggested he write down the problem so he can let it go for the night. He said he could then have to keep rereading what he wrote to make sure he got it right. During the next week, he is going to think about how to set things aside for the night without forgetting them and not getting them quite right when he starts thinking about them the next day.

Visit is deployment-related Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009 Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009.

Pain Severity 0 / 10 Pain Severity 0 / 10.

Current medication

See ALTHA, per patient, none

Past medical/surgical history**Reported:**

Medical: Reported medical history
See ALTHA

and psychiatric history

- * THERAPY: Fleet and Family Aug 2012 for 4 or 5 months
- * MEDS: none
- * INPATIENT/RESIDENTIAL CARE: denied
- * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: in H/S, swallowed a whole bottle of aspirin - felt sick, never told anyone
- * FPMH: sister is bi-polar, other sister depressed. Mom and grandmother are bi-polar. Father is obese, diabetic, alcoholic? - drinks every other or every night - has not seen him since 2009 so is not sure how he is doing

Personal history

Social history Born and raised in Riverside, CAL, Dad was in military for 2 years. SM is 29, sisters are 27 and 26. All full siblings.

Parents divorced when he was 2 or 3. Dad got full custody immediately. He didn't

want mother to ever see them.

Mother left bruises on his sister. Lost full custody. Dad was really more abusive. Age 8, got step-mother, they were together for 10 years. Step-mother later told patient that she stayed with their father for their sakes as long as she could. Before their divorce, father started seeing his next wife. Brought her to patient

's track events. Dad got divorced from her about 1 yr ago. SM lived in Cal until 14.

EDUCATION/MILITARY: H/S in NJ. Really awful, started Freshman yr at one school, then they moved again during that yr. He lost most of his credits that yr. Got along at school because he was a runner. 2.2 GPA, no scholarships. Worked during the school yr and summers. Rented a room from his step-mom (told his dad he was going away to school). Lived with her for 2 yrs and went to college for 1 semester. Drinking lot, dating crazies, decided to join the military. Planned on making a career of the military, not sure now. Doesn't

want to move anymore.

ADULT RELATIONSHIPS: never married, no children. Last relationship - Kristina, age 29. They have been together 6 months, living together 4 months. Her lease was up so they moved in together. He thinks he wants to break up with her. She doesn't want to talk about anything. The relationship before this one lasted 2 years. The first 6 months were good. The rest of the time was rocky. They started out as house mates. She had drinking problems. He tried to help by not drinking either. She spent the rest of the time hiding her drinking. She also was taking anti-depressants and didn't

tell him.

SPIRITUAL: none

Behavioral: Caffeine use 20 oz a day of coffee - sometimes more 20 oz a day of coffee - sometimes more. Tobacco use current smoker Used to smoke hooka when overseas - Amt per Day: Used to smoke hooka when overseas - Amt per Day:

Alcohol: Alcohol use Liquor - 1-3 drinks, 1 or 2 X a week if liquor in fridge, 6 or more drinks one time or less a month, trying to cut

Subjective**Additional Screening Questions:**

Are you having any thoughts about harming another person? denied

Do you feel like you are at risk for workplace violence? denied

Additional Screening Questions:

Are you having any thoughts about harming another person? denied

Do you feel like you are at risk for workplace violence? denied

PTSD CHECKLIST (PCL-C)

- ☐ Repeated, disturbing memories, thoughts, or images of a stressful experience from the past?
- ☐ Repeated, disturbing dreams of a stressful experience from the past?
- ☐ Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
- ☐ Feeling very upset when something reminded you of a stressful experience from the past?
- ☐ Having physical reactions (e.g., heart pounding, trouble breathing, or sweating) when something reminded you of a stressful experience from the past?
- ☐ Avoid thinking about or talking about a stressful experience from the past or avoid having feelings related to it?
- ☐ Avoid activities or situations because they remind you of a stressful experience from the past?
- ☐ Trouble remembering important parts of a stressful experience from the past?
- ☐ Loss of interest in things that you used to enjoy?
- ☐ Feeling distant or cut off from other people?
- ☐ Feeling emotionally numb or being unable to have loving feelings for those close to you?
- ☐ Feeling as if your future will somehow be cut short?
- ☐ Trouble falling or staying asleep?
- ☐ Feeling irritable or having angry outbursts?
- ☐ Having difficulty concentrating?
- ☐ Being 'super alert
- ☐ or watchful on guard?
- ☐ Feeling jumpy or easily startled?

Add point values from each response. Total Score = 0 DATE: 8-4-14

If you had a positive score on any of the above problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people? ☐ Not difficult ☐ Somewhat difficult ☐ Very difficult ☐ Extremely difficultDuring the last 2 weeks have you had thoughts that you would be better off dead, or of hurting yourself in some way? ☐ Yes ☐ No

If

'Yes

, how often? ☐ Several days ☐ More than half the days ☐ Almost everyday.**Depression Screening:**

- ☐ 1. Little Interest or pleasure in doing things
- ☐ 2. Feeling down depressed or hopeless
- ☐ 3. Trouble sleeping or sleeping too much
- ☐ 4. Feeling tired or little energy
- ☐ 5. Poor appetite or overeating
- ☐ 6. Feeling bad about self
- ☐ 7. Trouble concentrating on things
- ☐ 8. Moving or speaking slowly or being restless
- ☐ 9. Thoughts that you would be better off dead

Add point values from each response. Total (PHQ-9) Score = 7/27 on 8-4-14

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☒ Somewhat ☐ Very ☐ Extremely.**Generalized Anxiety Disorder Screening:**

- ☐ 1. Feeling nervous, anxious, or on edge
- ☐ 2. Not being able to stop or control worrying
- ☐ 3. Worrying too much about different things
- ☐ 4. Trouble relaxing
- ☐ 5. Being so restless that it's hard to sit still
- ☐ 6. Becoming easily annoyed or irritable

Medical Record

2. Relationship problems

Long-Term Goals:

1. Reduce overall frequency, intensity, and duration of the anxiety so that daily functioning is not impaired.
2. Develop the necessary skills for effective, open communication

Discussion of risk of assessment and intervention

Interventions Provided at this session:

supportive therapy

Objective 1 (Corresponds to Goal #1):

- The patient will learn, and by self-report, implement skills to reduce overall anxiety and manage anxiety symptoms.

Interventions:

1. Establish rapport with the client toward building a therapeutic alliance.

Objective 2 (Corresponds to Goal #2):

- By self report, increase the frequency of the direct expression of honest, respectful, and positive feelings and thoughts within relationships.

Interventions:

1. Help patient review any new relationships for possible problems.

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

1. ANXIETY DISORDER NOS

Procedure(s): -Clinical Social Work Individual Outpatient Counseling 45 Minutes x 1

Disposition Last Updated by NILSEN, LINDA M @ 25 Sep 2014 0940 EDT**Released w/o Limitations****Follow up:** for therapy 1 to 2 week(s) in the PSYCHIATRY BE clinic.**Discussed:** Medication(s)/Treatment(s), Alternatives with Patient who indicated understanding.

60 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

Signed By NILSEN, LINDA M (LCSW-C, Behavioral Health) @ 16 Oct 2014 0832**CHANGE HISTORY***The following S/O Note Was Overwritten by NILSEN, LINDA M @ 16 Oct 2014 0824 EDT:**S/O Note Written by NILSEN, LINDA M @ 25 Sep 2014 0936 EDT***History of present illness**

The Patient is a 29 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

INITIAL ASSESSMENT 8-4-14: 29 year old SWM Navy, E-6, with 9 years TIS, 2 years at NIOC at Ft Meade, 2 years to go, not sure if he wants to stay in - will have to stay in or some time due to braces on teeth. Self referral. Patient believes that his family of origin is impacting on how he relates to others now that he is an adult. During the past month, he has experienced the following symptoms: anxiety or worries and difficulty concentrating. Patient "picks" at his scalp. Has several dry patches where he has scraped/picked the hair out in circles. He has been doing this since 2009. He thinks it is a combination of dry skin and his picking at the scalp.

Nutrition: tries to eat healthy, goes out 1 X a week, has some family issues - father is large, has diabetes - does not want to turn out like him

Insomnia Severity Index: 8/28 Patient has a hard time getting to sleep, at times it takes 2 hrs. He wakes up during the night when he has something on his mind. If he listens to rain and storms it helps him sleep better.

Abuse: Father was physically abusive of sisters more so than with him. Dad also shaved patient's head when he was 17 because he thought Sm's hair was too long. Patient was allergic to animals, Father kept cats and dogs. SM used emergency inhaler 3 or 4 X a day.

Goals he would like to deal with: 1.) anxiety, 2.) past issues - family abuse (verbal, physical), 3.) new way of handling issues - rather than ignore them.

9-25-14: Follow-up appointment for patient being seen for adjustment disorder and anxiety disorder. Patient arrived on time. Patient saw a physical therapist yesterday. He has been having problems with his left ankle since April 2014. He wanted to get light limited duty. He found out after he got there that only his PCM can issue light limited duty. They did give him a brace to help immobilize the ankle. He is working on his list of serious dating potentials. So far he has no kids and someone who is OK with he doing things he likes to do (like computer work for long periods of time). Focus on sleep problems - mainly getting to sleep. It takes him 1 - 2 hours to get to sleep each night. His mind is very active. He thinks about problems he wants to solve, etc. If he stops thinking about one problem, he starts thinking about another problem. This writer suggested he write down the problem so he can let it go for the night. He said he could then have to keep rereading what he wrote to make sure he got it right. During the next week, he is going to think about how to set things aside for the night without forgetting them and not getting them quite right when he starts thinking about them the next day.

Visit is deployment-related Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009 Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009.

Pain Severity 0 / 10 Pain Severity 0 / 10.

Current medication

See ALTHA, per patient, none

Past medical/surgical history**Reported:**

Medical: Reported medical history

See ALTHA

and psychiatric history

- THERAPY: Fleet and Family Aug 2012 for 4 or 5 months

- MEDS: none

- INPATIENT/RESIDENTIAL CARE: denied

- SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: in H/S, swallowed a whole bottle of aspirin - felt sick, never told anyone

- FPMH: sister is bi-polar, other sister depressed. Mom and grandmother are bi-polar. Father is obese, diabetic, alcoholic? - drinks every other or every night - has not seen him since 2009 so is not sure how he is doing

Personal history

Social history Born and raised in Riverside, CAL, Dad was in military for 2 years. SM is 28, sisters are 27 and 26. All full siblings. Parents divorced when he was 2 or 3. Dad got full custody immediately. He didn't want mother to ever see them.

Mother left bruises on his sister. Lost full custody. Dad was really more abusive. Age 8, got step-mother, they were together for 10 years. Step-mother later told patient that she stayed with their father for their sakes as long as she could. Before their divorce, father started seeing his next wife. Brought her to patient's track events. Dad got divorced from her about 1 yr ago. SM lived in Cal until 14.

EDUCATION/MILITARY: H/S in NJ. Really awful, started Freshman yr at one school, then they moved again during that yr. He lost most of his credits that yr. Got along at school because he was a runner. 2.2 GPA, no scholarships. Worked during the school yr and summers. Rented a room from his step-mom (told his dad he was going away to school). Lived with her for 2 yrs and went to college for 1 semester. Drinking lot, dating crazies, decided to join the military. Planned on making a career of the military, not sure now. Doesn't want to move anymore.

ADULT RELATIONSHIPS: never married, no children. Last relationship - Kristina, age 29. They have been together 6 months, living together 4 months. Her lease was up so they moved in together. He thinks he wants to break up with her. She doesn't want to talk about anything. The relationship before this one lasted 2 years. The first 6 months were good. The rest of the time was rocky. They started out as house mates.

Additional Screening Questions:

Are you having any thoughts about harming another person? denied

Do you feel like you are at risk for workplace violence? denied

Additional Screening Questions:

Are you having any thoughts about harming another person? denied

Do you feel like you are at risk for workplace violence? denied

PTSD CHECKLIST (PCL-C)

- ☐ Repeated, disturbing memories, thoughts, or images of a stressful experience from the past?
- ☐ Repeated, disturbing dreams of a stressful experience from the past?
- ☐ Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
- ☐ Feeling very upset when something reminded you of a stressful experience from the past?
- ☐ Having physical reactions (e.g., heart pounding, trouble breathing, or sweating) when something reminded you of a stressful experience from the past?
- ☐ Avoid thinking about or talking about a stressful experience from the past or avoid having feelings related to it?
- ☐ Avoid activities or situations because they remind you of a stressful experience from the past?
- ☐ Trouble remembering important parts of a stressful experience from the past?
- ☐ Loss of interest in things that you used to enjoy?
- ☐ Feeling distant or cut off from other people?
- ☐ Feeling emotionally numb or being unable to have loving feelings for those close to you?
- ☐ Feeling as if your future will somehow be cut short?
- ☐ Trouble falling or staying asleep?
- ☐ Feeling irritable or having angry outbursts?
- ☐ Having difficulty concentrating?
- ☐ Being 'super alert'
- ☐ or watchful on guard?
- ☐ Feeling jumpy or easily startled?

Add point values from each response. Total Score = 0 DATE: 8-4-14

If you had a positive score on any of the above problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people? ☐ Not difficult ☐ Somewhat difficult ☐ Very difficult ☐ Extremely difficult

During the last 2 weeks have you had thoughts that you would be better off dead, or of hurting yourself in some way? ☐ Yes ☐ No

If

'Yes

, how often? ☐ Several days ☐ More than half the days ☐ Almost everyday.

Depression Screening:

- ☐ 1. Little Interest or pleasure in doing things
- ☐ 2. Feeling down depressed or hopeless
- ☐ 3. Trouble sleeping or sleeping too much
- ☐ 4. Feeling tired or little energy
- ☐ 5. Poor appetite or overeating
- ☐ 6. Feeling bad about self
- ☐ 7. Trouble concentrating on things
- ☐ 8. Moving or speaking slowly or being restless
- ☐ 9. Thoughts that you would be better off dead

Add point values from each response. Total (PHQ-9) Score = 7/27 on 8-4-14

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☒ Somewhat ☐ Very ☐ Extremely.

Generalized Anxiety Disorder Screening:

- ☐ 1. Feeling nervous, anxious, or on edge
- ☐ 2. Not being able to stop or control worrying
- ☐ 3. Worrying too much about different things
- ☐ 4. Trouble relaxing
- ☐ 5. Being so restless that it's hard to sit still
- ☐ 6. Becoming easily annoyed or irritable
- ☐ 7. Feeling afraid as if something awful might happen

Add point values from each response. Total (GAD-7) Score = 12/27 on 8-4-14

It is very difficult for him to do his work, take care of things at home, or get along with other people

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☐ Somewhat ☐ Very ☐ Extremely.

Physical findings

General Appearance:

* Alert. * Well developed. * Well nourished. * In no acute distress.

Neurological:

* No disorientation was observed, oriented x3, oriented x3. * No hallucinations. * Memory was unimpaired. * Remote memory was not impaired. * Recent memory was not impaired. * Judgement was not impaired.

Speech: * Normal, regular rate, non-pressured. , regular rate, non-pressured. * Rate was not slowed. * Not pressured. * Tone was not a monotone.

Psychiatric:

Demonstrated Behavior: * Behavior demonstrated no abnormalities - appropriate and cooperative - appropriate and cooperative. * No psychomotor retardation.

Continue assessment and intervention

Multi-Disciplinary Treatment Plan:

Treatment Team Members -

Individual Therapist: L Nilsen, LCSW-C

Date last updated: 9-11-14

Reviewed with patient on: 9-11-14

Does patient agree with plan? yes

If not, what part?

Projected date of next treatment plan update: 12-11-14

Discussion of assessment and intervention

Tx Plan cont~d:

Diagnosis

I. 300.00 Anxiety D/O NOS

II. 799.9 deferred

III. none

IV. Limited support system, few friends

V. current GAF: 65

Active Problem List:

1. Anxiety
2. Relationship problems

Long-Term Goals:

1. Reduce overall frequency, intensity, and duration of the anxiety so that daily functioning is not impaired.

2. Develop the necessary skills for effective, open communication

Discussion of risk of assessment and intervention

Interventions Provided at this session:

supportive therapy

Objective 1 (Corresponds to Goal #1):

- The patient will learn, and by self-report, implement skills to reduce overall anxiety and manage anxiety symptoms.

Interventions:

1. Establish rapport with the client toward building a therapeutic alliance.

Objective 2 (Corresponds to Goal #2):

- By self report, increase the frequency of the direct expression of honest, respectful, and positive feelings and thoughts within relationships.

Interventions:

1. Help patient review any new relationships for possible problems.

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

Note Written by LAI, PHILOMENA C @ 24 Sep 2014 1547 EDT**Chief complaint**

The Chief Complaint is: L ankle sprain

Visit for: Re- Evaluation
 (9/24/2014)

Subjective: Patient presents to clinic reporting continue L ankle pain since his return doing PT as he has been walking, running, jumping a lot, L ankle swelling resurface, now pain on L ankle even walking for long distance. Patient states he will be doing his PFT in 2 weeks but will not be able to do the running portion of PT.

(8/8/2014)

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Subjective: Patient reports he has no ankle pain with walking, he has done 2-mile walking, doing stairs with no pain, noticed bruising on L ankle and some swelling, L ankle looks slightly different from R, L ankle popping/cracking with movement and there is pain when that happens. Patient reports he has not tried running yet and he will be doing his PFT (1.5 m run) in Oct.

Objective: Observation: very mild swelling L ankle ROM: L ankle DF 10 deg, PF 45 deg, EV 15 deg, IV 35 deg Strength: L ankle 5/5 throughout Flexibility: mod tightness hamstrings, mild/mod tightness calf

Assessment/Plan: Improved L ankle ROM with full strength, bilateral hamstrings and calf tightness continue. Patient was instructed on continue with ankle ROM, emphasized importance of daily stretching, proper running gait. Patient will gradual progress to jog/run on his own Follow up in 4 weeks to re-assess.

History of present illness: INITIAL EVALUATION (6/27/2014): Patient is a 29 y/o M referred to physical therapy for evaluation and treatment of L ankle sprain. Patient initially injured L ankle in April 2014 while he was sprinting during softball game when his L foot went into the hole. Since onset, symptoms have unchanged

Meds: reviewed in AHLTA.

Pain scale 72 hrs: current 0/10 best 0/10 worst 3/10

Description of pain: comes and goes

Aggravating factors: motion

Mitigating factors: rest, elevation, ice

Day pattern: episodic

Recent/previous treatment: none

Functional limitations: no running at this time, increased throbbing sensation after prolonged walking

Patient goals: to run again (patient used to run 5 miles per day 4-5 time per week).

Past medical/surgical history**Reported:**

Past medical history reviewed and discussed. Co-morbidities: none

Diagnostics: x-ray L ankle in AHLTA

Medical precautions: none

Job duties: desk primarily.

Objective

Observation: genu and tibial varus, normal calcaneus alignment, mild swelling L lateral malleolus area

palpation: TTP lateral L ankle anterior to lateral malleolus

flexibility: mod tightness hamstrings, calf

Joint Mobility: normal L ankle joint mobility

Sensation/Reflex: intact

ROM: ankle: DF L 15 deg R 13 deg, PF L 44 deg R 50 deg, IV L 35 deg R 35 deg, EV L 12 deg R 15 deg, 1st ray ext L 50 deg R 70 deg, flex L 12 deg R 30 deg

Strength: DF - 5/5 bil, PF 5/5 bil, IV L 5/5 R 5/5, EV L 5/5 R 5/5

Special Tests: thompson - neg, talar tilt - neg, ant/post drawer

function: gait - no significant deviations, SLS EO - L/R = 30 sec, good ankle stability bil, SLHR L 25/25 R 25/25, no instability noted but fatigue quickly L with pain

Tests

Re-evaluation (9/24/2014): Patient with recurrent ankle pain, most likely repeated strain from excessive impact activities.

Recommend patient hold off from jumping, squatting and running activities at this time to allow sufficient time for healing. Patient will need to continue strengthening and stretching program. Provided prescription for ankle brace to provide support.

Assessment (6/27/2014): Patient presented with decreased L ankle ROM s/p ankle sprain, mild weakness of ankle IV and EV with no instability. Patient would benefit from physical therapy home based ex program to improve ROM and strength.

Rehab prognosis: good

Physical Therapy goals:

STG to be achieved in 3 weeks

Patient to be independent with HEP- met

Patient to increase ROM to: L ankle DF 10 deg, PF 40 deg, IV 35 deg EV 10 deg - met

LTG to be achieved in 6-8 weeks

Decrease pain to: 0/10

Increase MMT to: 5/5 - met

Improve function to: tolerate long distance walking without increased in symptoms

running 1 mile 50% pace with no increased in symptoms

Patient education: Patient educated on his/her condition in reference to pertinent anatomy and biomechanics using anatomical models and illustrations, self care, physical therapy and POC.

HEP instructions and performance (8/8/2014): stretch - hamstrings, calf, joint mobilization for DF/PF, ROM, alphabets

Plan of Care: Continue HEP for stretching and strengthening. Follow up in 5-6 weeks for re-evaluation.

S/O Note Written by NILSEN, LINDA M @ 25 Sep 2014 0930 EDT**History of present illness**

The Patient is a 29 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

INITIAL ASSESSMENT 8-4-14: 29 year old SWM Navy, E-6, with 9 years TIS, 2 years at NIOC at Ft Meade. 2 years to go, not sure if he wants to stay in - will have to stay in or some time due to braces on teeth. Self referral. Patient believes that his family of origin is impacting on how he relates to others now that he is an adult. During the past month, he has experienced the following symptoms: anxiety or worries and difficulty concentrating. Patient "picks" at his scalp. Has several dry patches where he has scraped/picked the hair out in circles. He has been doing this since 2009. He thinks it is a combination of dry skin and his picking at the scalp.

Nutrition: tries to eat healthy, goes out 1 X a week, has some family issues - father is large, has diabetes - does not want to turn out like him

Insomnia Severity Index: 8/28 Patient has a hard time getting to sleep, at times it takes 2 hrs. He wakes up during the night when he has something on his mind. If he listens to rain and storms it helps him sleep better.

Abuse: Father was physically abusive of sisters more so than with him. Dad also shaved patient's head when he was 17 because he thought Sm's hair was too long. Patient was allergic to animals, Father kept cats and dogs. SM used emergency inhaler 3 or 4 X a day.

Goals he would like to deal with: 1.) anxiety, 2.) past issues - family abuse (verbal, physical), 3.) new way of handling issues - rather than ignore them.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

9-18-14: Follow-up appointment for patient being seen for adjustment disorder and anxiety disorder. Focus on relationships. He has turned match.com back on. He did this before his girlfriend moved out. Realized he should have talked to her about ending their relationship first. Pt stated he has had numerous sexual encounters. He needs to slow down how quickly he gets very involved in a relationship. Patient is going to work on making a list of the top 10 things he wants in a potential partner.

Visit is deployment-related Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009 Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009.

- * THERAPY: Fleet and Family Aug 2012 for 4 or 5 months
- * MEDS: none
- * INPATIENT/RESIDENTIAL CARE: denied
- * SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: in H/S, swallowed a whole bottle of aspirin - felt sick, never told anyone
- * FPMH: sister is bi-polar, other sister depressed. Mom and grandmother are bi-polar. Father is obese, diabetic, alcoholic? - drinks every other or every night - has not seen him since 2009 so is not sure how he is doing

Personal history

Social history Born and raised in Riverside, CAL, Dad was in military for 2 years. SM is 29, sisters are 27 and 26. All full siblings.

Parents divorced when he was 2 or 3. Dad got full custody immediately. He didn't

want mother to ever see them.

Mother left bruises on his sister. Lost full custody. Dad was really more abusive. Age 8, got step-mother, they were together for 10 years. Step-mother later told patient that she stayed with their father for their sakes as long as she could. Before their divorce, father started seeing his next wife. Brought her to patient

's track events. Dad got divorced from her about 1 yr ago. SM lived in Cal until 14.

EDUCATION/MILITARY: H/S in NJ. Really awful, started Freshman yr at one school, then they moved again during that yr. He lost most of his credits that yr. Got along at school because he was a runner. 2.2 GPA, no scholarships. Worked during the school yr and summers. Rented a room from his step-mom (told his dad he was going away to school). Lived with her for 2 yrs and went to college for 1 semester. Drinking lot, dating crazies, decided to join the military. Planned on making a career of the military, not sure now. Doesn't

want to move anymore.

ADULT RELATIONSHIPS: never married, no children. Last relationship - Kristina, age 29. They have been together 6 months, living together 4 months. Her lease was up so they moved in together. He thinks he wants to break up with her. She doesn't

want to talk about anything. The relationship before this one lasted 2 years. The first 6 months were good. The rest of the time was rocky. They started out as house mates. She had drinking problems. He tried to help by not drinking either. She spent the rest of the time hiding her drinking. She also was taking anti-depressants and didn't

tell him.

SPIRITUAL: none

Behavioral: Caffeine use 20 oz a day of coffee - sometimes more 20 oz a day of coffee - sometimes more. Tobacco use current

smoker Used to smoke hooka when overseas - Amt per Day: Used to smoke hooka when overseas - Amt per Day:

Alcohol: Alcohol use Liquor - 1-3 drinks, 1 or 2 X a week if liquor in fridge, 6 or more drinks one time or less a month, trying to cut down Liquor - 1-3 drinks, 1 or 2 X a week if liquor in fridge, 6 or more drinks one time or less a month, trying to cut down.

Additional Screening Questions:

Are you having any thoughts about harming another person? denied
 Do you feel like you are at risk for workplace violence? denied

PTSD CHECKLIST (PCL-C)

- ☐ Repeated, disturbing memories, thoughts, or images of a stressful experience from the past?
- ☐ Repeated, disturbing dreams of a stressful experience from the past?
- ☐ Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
- ☐ Feeling very upset when something reminded you of a stressful experience from the past?
- ☐ Having physical reactions (e.g., heart pounding, trouble breathing, or sweating) when something reminded you of a stressful experience from the past?
- ☐ Avoid thinking about or talking about a stressful experience from the past or avoid having feelings related to it?
- ☐ Avoid activities or situations because they remind you of a stressful experience from the past?
- ☐ Trouble remembering important parts of a stressful experience from the past?
- ☐ Loss of interest in things that you used to enjoy?
- ☐ Feeling distant or cut off from other people?
- ☐ Feeling emotionally numb or being unable to have loving feelings for those close to you?
- ☐ Feeling as if your future will somehow be cut short?
- ☐ Trouble falling or staying asleep?
- ☐ Feeling irritable or having angry outbursts?
- ☐ Having difficulty concentrating?
- ☐ Being 'super alert' or watchful on guard?
- ☐ Feeling jumpy or easily startled?

Add point values from each response. Total Score = 0 DATE: 8-4-14

If you had a positive score on any of the above problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people? ☐ Not difficult ☐ Somewhat difficult ☐ Very difficult ☐ Extremely difficult

During the last 2 weeks have you had thoughts that you would be better off dead, or of hurting yourself in some way? ☐ Yes ☐ No

If

'Yes

, how often? ☐ Several days ☐ More than half the days ☐ Almost everyday.

Depression Screening:

- ☐ 1. Little Interest or pleasure in doing things
- ☐ 2. Feeling down depressed or hopeless
- ☐ 3. Trouble sleeping or sleeping too much
- ☐ 4. Feeling tired or little energy
- ☐ 5. Poor appetite or overeating
- ☐ 6. Feeling bad about self
- ☐ 7. Trouble concentrating on things
- ☐ 8. Moving or speaking slowly or being restless
- ☐ 9. Thoughts that you would be better off dead

Add point values from each response. Total (PHQ-9) Score = 7/27 on 8-4-14

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☒ Somewhat ☐ Very ☐ Extremely.

Generalized Anxiety Disorder Screening:

- ☐ 1. Feeling nervous, anxious, or on edge
- ☐ 2. Not being able to stop or control worrying
- ☐ 3. Worrying too much about different things
- ☐ 4. Trouble relaxing
- ☐ 5. Being so restless that it's hard to sit still
- ☐ 6. Becoming easily annoyed or irritable
- ☐ 7. Feeling afraid as if something awful might happen

Add point values from each response. Total (GAD-7) Score = 12/27 on 8-4-14

It is very difficult for him to do his work, take care of things at home, or get along with other people

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☐ Somewhat ☐ Very ☐ Extremely.

I. 300.00 Anxiety D/O NOS

II. 799.9 deferred

III. none

IV. Limited support system, few friends

V. current GAF: 65

Active Problem List:

1. Anxiety
2. Relationship problems

Long-Term Goals:

1. Reduce overall frequency, intensity, and duration of the anxiety so that daily functioning is not impaired.
2. Develop the necessary skills for effective, open communication

Discussion of risk of assessment and intervention

Interventions Provided at this session:

supportive therapy

Objective 1 (Corresponds to Goal #1):

- The patient will learn, and by self-report, implement skills to reduce overall anxiety and manage anxiety symptoms.

Interventions:

1. Establish rapport with the client toward building a therapeutic alliance.

Objective 2 (Corresponds to Goal #2):

- By self report, Increase the frequency of the direct expression of honest, respectful, and positive feelings and thoughts within relationships.

Interventions:

1. Help patient review any new relationships for possible problems.

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

Do you feel like you are at risk for workplace violence? denied

PTSD CHECKLIST (PCL-C)

- ☐ Repeated, disturbing memories, thoughts, or images of a stressful experience from the past?
- ☐ Repeated, disturbing dreams of a stressful experience from the past?
- ☐ Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
- ☐ Feeling very upset when something reminded you of a stressful experience from the past?
- ☐ Having physical reactions (e.g., heart pounding, trouble breathing, or sweating) when something reminded you of a stressful experience from the past?
- ☐ Avoid thinking about or talking about a stressful experience from the past or avoid having feelings related to it?
- ☐ Avoid activities or situations because they remind you of a stressful experience from the past?
- ☐ Trouble remembering important parts of a stressful experience from the past?
- ☐ Loss of interest in things that you used to enjoy?
- ☐ Feeling distant or cut off from other people?
- ☐ Feeling emotionally numb or being unable to have loving feelings for those close to you?
- ☐ Feeling as if your future will somehow be cut short?
- ☐ Trouble falling or staying asleep?
- ☐ Feeling irritable or having angry outbursts?
- ☐ Having difficulty concentrating?
- ☐ Being 'super alert' or watchful on guard?
- ☐ Feeling jumpy or easily startled?

Add point values from each response. Total Score = 0 DATE: 8-4-14

IF you had a positive score on any of the above problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people? ☐ Not difficult ☐ Somewhat difficult ☐ Very difficult ☐ Extremely difficult

During the last 2 weeks have you had thoughts that you would be better off dead, or of hurting yourself in some way? ☐ Yes ☐ No

If

'Yes

, how often? ☐ Several days ☐ More than half the days ☐ Almost everyday.

Depression Screening:

- ☐ 1. Little interest or pleasure in doing things
- ☐ 2. Feeling down depressed or hopeless
- ☐ 3. Trouble sleeping or sleeping too much
- ☐ 4. Feeling tired or little energy
- ☐ 5. Poor appetite or overeating
- ☐ 6. Feeling bad about self
- ☐ 7. Trouble concentrating on things
- ☐ 8. Moving or speaking slowly or being restless
- ☐ 9. Thoughts that you would be better off dead
- Add point values from each response. Total (PHQ-9) Score = 7/27 on 8-4-14

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☒ Somewhat ☐ Very ☐ Extremely.

Generalized Anxiety Disorder Screening:

- ☐ 1. Feeling nervous, anxious, or on edge
- ☐ 2. Not being able to stop or control worrying
- ☐ 3. Worrying too much about different things
- ☐ 4. Trouble relaxing
- ☐ 5. Being so restless that it's hard to sit still
- ☐ 6. Becoming easily annoyed or irritable
- ☐ 7. Feeling afraid as if something awful might happen

Add point values from each response. Total (GAD-7) Score = 12/27 on 8-4-14

It is very difficult for him to do his work, take care of things at home, or get along with other people

Therapy

- Duration of the encounter 60 min.

Practice Management

Continue assessment and intervention
Multi-Disciplinary Treatment Plan:

Treatment Team Members -

Individual Therapist: L Nilsen, LCSW-C

Date last updated: 9-11-14

Reviewed with patient on: 9-11-14

Does patient agree with plan? yes

If not, what part?

Projected date of next treatment plan update: 12-11-14

Discussion of assessment and intervention

Tx Plan cont--"d:

Diagnosis

I. 300.00 Anxiety D/O NOS

II. 799.9 deferred

III. none

IV. Limited support system, few friends

V. current GAF: 65

Active Problem List:

1. Anxiety
2. Relationship problems

Long-Term Goals:

1. Reduce overall frequency, intensity, and duration of the anxiety so that daily functioning is not impaired.
2. Develop the necessary skills for effective, open communication

Discussion of risk of assessment and intervention

Interventions Provided at this session:

supportive therapy

Objective 1 (Corresponds to Goal #1):

- The patient will learn, and by self-report, implement skills to reduce overall anxiety and manage anxiety symptoms.

Interventions:

1. Establish rapport with the client toward building a therapeutic alliance.

Objective 2 (Corresponds to Goal #2):

- By self report, Increase the frequency of the direct expression of honest, respectful, and positive feelings and thoughts within relationships.

Interventions:

1. Help patient review any new relationships for possible problems.

Patient agrees to contact the clinic, call 911, or go to the nearest Emergency Department if symptoms worsen or if suicidal or homicidal thoughts develop.

S/O Note Written by LAI, PHILOMENA C. @ 08 Aug 2014 0735 EDT**Chief complaint**

The Chief Complaint is: L ankle sprain

Visit for: Re- Evaluation

Subjective: Patient reports he has no ankle pain with walking, he has done 2-mile walking, doing stairs with no pain, noticed bruising on L ankle and some swelling, L ankle looks slightly different from R, L ankle popping/cracking with movement and there is pain when that happens. Patient reports he has not tried running yet and he will be doing his PFT (1.5 m run) in Oct.

Objective: Observation: very mild swelling L ankle ROM: L ankle DF 10 deg, PF 45 deg, EV 15 deg, IV 35 deg Strength: L ankle 5/5 throughout. Flexibility: mod tightness hamstrings, mild/mod tightness calf

Assessment/Plan: improved L ankle ROM with full strength, bilateral hamstrings and calf tightness continue. Patient was instructed on continue with ankle ROM, emphasized importance of daily stretching, proper running gait. Patient will gradual progress to jog/run on his own Follow up in 4 weeks to re-assess.

History of present illness: INITIAL EVALUATION (6/27/2014): Patient is a 29 y/o M referred to physical therapy for evaluation and treatment of L ankle sprain. Patient initially injured L ankle in April 2014 while he was sprinting during softball game when his L foot went into the hole. Since onset, symptoms have unchanged

Meds: reviewed in AHLTA.

Pain scale 72 hrs: current 0/10

best 0/10 worst 3/10

Description of pain: comes and goes

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538

Created: 30 Oct 2017

Aggravating factors: motion
 Mitigating factors: rest, elevation, ice
 Day pattern: episodic
 Recent/previous treatment: none
 Functional limitations: no running at this time, increased throbbing sensation after prolonged walking
 Patient goals: to run again (patient used to run 5 miles per day 4-5 time per week).

Past medical/surgical history**Reported:**

Past medical history reviewed and discussed. Co-morbidities: none
 Diagnostics: x-ray L ankle in AHLTA
 Medical precautions: none
 Job duties: desk primarily.

Objective

Observation: genu and tibial varus, normal calcaneus alignment
 palpation: no TTP
 flexibility: mod tightness hamstrings, calf
 Joint Mobility: decreased L TC ant/post mob, STJ med/lat mob
 Sensation/Reflex: intact
 ROM: ankle: DF L 3 deg R 13 deg, PF L 28 deg R 50 deg, IV L 24 deg R 35 deg, EV L 6 deg R 15 deg, 1st ray ext L 56 deg R 70 deg, flex L 25 deg R 30 deg
 Strength: DF - 5/5 bil, PF 5/5 bil, IV L 4+/5 R 5-/5, EV L 4+/5 R 5/5
 Special Tests: thompson - neg, talar tilt - neg, ant/post drawer - neg
 function: gait - no significant deviations, SLS EO - L/R = 30 sec, good ankle stability bil, SLHR L 25/25 R 25/25, no instability noted.

Tests

Assessment (6/27/2014): Patient presented with decreased L ankle ROM s/p ankle sprain, mild weakness of ankle IV and EV with no instability. Patient would benefit from physical therapy home based ex program to improve ROM and strength.
 Rehab prognosis: good

Physical Therapy goals:

STG to be achieved in 3 weeks
 Patient to be independent with HEP
 Patient to increase ROM to: L ankle DF 10 deg, PF 40 deg, IV 35 deg EV 10 deg

LTG to be achieved in 6-8 weeks
 Decrease pain to: 0/10
 Increase MMT to: 5/5
 Improve function to: tolerate long distance walking without increased in symptoms
 running 1 mile 50% pace with no increased in symptoms

Patient education: Patient educated on his/her condition in reference to pertinent anatomy and biomechanics using anatomical models and illustrations, self care, physical therapy and POC.
 HEP instructions and performance (15 min): stretch - hamstrings, calf, joint mobilization for DF/PF, ROM, alphabets

Plan of Care: Patient has consented to physical therapy treatment. Patient to perform HEP indep. Follow up in 6 weeks..

S/O Note Written by NILSEN, LINDA M @ 04 Aug 2014 1525 EDT**History of present illness**

The Patient is a 29 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

INITIAL ASSESSMENT 8-4-14: 29 year old SWM Navy, E-6, with 9 years TIS, 2 years at NIOC at Ft Meade. 2 years to go, not sure if he wants to stay in - will have to stay in or some time due to braces on teeth. Self referral. Patient believes that his family of origin is impacting on how he relates to others now that he is an adult. During the past month, he has experienced the following symptoms: anxiety or worries and difficulty concentrating. Patient "picks" at his scalp. Has several dry patches where he has scraped/picked the hair out in circles. He has been doing this since 2009. He thinks it is a combination of dry skin and his picking at the scalp.

Nutrition: tries to eat healthy, goes out 1 X a week, has some family issues - father is large, has diabetes - does not want to turn out like him

Insomnia Severity Index: 8/28 Patient has a hard time getting to sleep, at times it takes 2 hrs. He wakes up during the night when he has something on his mind. If he listens to rain and storms it helps him sleep better.

Abuse: Father was physically abusive of sisters more so than with him. Dad also shaved patient's head when he was 17 because he thought Sm's hair was too long. Patient was allergic to animals, Father kept cats and dogs. SM used emergency inhaler 3 or 4 X a day.

Goals he would like to deal with: 1.) anxiety, 2.) past issues - family abuse (verbal, physical), 3.) new way of handling issues - rather than ignore them.

Visit is deployment-related Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009.

Pain Severity 0 / 10.

and psychiatric history

* THERAPY: Fleet and Family Aug 2012 for 4 or 5 months

* MEDS: none

* INPATIENT/RESIDENTIAL CARE: denied

* SELF HARM OR MUTILATION/SUICIDE ATTEMPTS: in H/S, swallowed a whole bottle of aspirin - felt sick, never told anyone

* FPMH: sister is bi-polar, other sister depressed. Mom and grandmother are bi-polar. Father is obese, diabetic, alcoholic? - drinks every other or every night - has not seen him since 2009 so is not sure how he is doing.

Personal history

Social history Born and raised in Riverside, CAL. Dad was in military for 2 years. SM is 29, sisters are 27 and 26. All full siblings. Parents divorced when he was 2 or 3. Dad got full custody immediately. He didn't want mother to ever see them.

Mother left bruises on his sister. Lost full custody. Dad was really more abusive. Age 8, got step-mother, they were together for 10 years. Step-mother later told patient that she stayed with their father for their sakes as long as she could. Before their divorce, father started seeing his next wife. Brought her to patient's track events. Dad got divorced from her about 1 yr ago. SM lived in Cal until 14.

EDUCATION/MILITARY: H/S in NJ. Really awful, started Freshman yr at one school, then they moved again during that yr. He lost most of his credits that yr. Got along at school because he was a runner. 2.2 GPA, no scholarships. Worked during the school yr and summers. Rented a room from his step-mom (told his dad he was going away to school). Lived with her for 2 yrs and went to college for 1 semester. Drinking lot, dating crazies, decided to join the military. Planned on making a career of the military, not sure now. Doesn't want to move anymore.

ADULT RELATIONSHIPS: never married, no children. Last relationship - Kristina, age 29. They have been together 6 months, living together 4 months. Her lease was up so they moved in together. He thinks he wants to break up with her. She doesn't want to talk about anything. The relationship before this one lasted 2 years. The first 6 months were good. The rest of the time was rocky. They started out as house mates. She had drinking problems. He tried to help by not drinking either. She spent the rest of the time hiding her drinking. She also was taking anti-depressants and didn't tell him.

SPIRITUAL: none

Behavioral: Caffeine use 20 oz a day of coffee - sometimes more. Current smoker Used to smoke hooka when overseas - Amt per Day:

Alcohol: Alcohol use Liquor - 1-3 drinks, 1 or 2 X a week if liquor in fridge, 6 or more drinks one time or less a month, trying to cut down.

Subjective**Generalized Anxiety Disorder Screening:**

- [3] 1. Feeling nervous, anxious, or on edge
 [1] 2. Not being able to stop or control worrying
 [2] 3. Worrying too much about different things
 [2] 4. Trouble relaxing
 [1] 5. Being so restless that it's hard to sit still
 [3] 6. Becoming easily annoyed or irritable
 [0] 7. Feeling afraid as if something awful might happen

Add point values from each response. Total (GAD-7) Score = 12/27 on 8-4-14

It is very difficult for him to do his work, take care of things at home, or get along with other people

Difficulty doing work, taking care of things at home, or getting along with other people? [] Not at all [] Somewhat [] Very [] Extremely.

PTSD CHECKLIST (PCL-C)

- [] Repeated, disturbing memories, thoughts, or images of a stressful experience from the past?
 [] Repeated, disturbing dreams of a stressful experience from the past?
 [] Suddenly acting or feeling as if a stressful experience were happening again (as if you were reliving it)?
 [] Feeling very upset when something reminded you of a stressful experience from the past?

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

- ☐ Having physical reactions (e.g., heart pounding, trouble breathing, or sweating) when something reminded you of a stressful experience from the past?
- ☐ Avoid thinking about or talking about a stressful experience from the past or avoid having feelings related to it?
- ☐ Avoid activities or situations because they remind you of a stressful experience from the past?
- ☐ Trouble remembering important parts of a stressful experience from the past?
- ☐ Loss of interest in things that you used to enjoy?
- ☐ Feeling distant or cut off from other people?
- ☐ Feeling emotionally numb or being unable to have loving feelings for those close to you?
- ☐ Feeling as if your future will somehow be cut short?
- ☐ Trouble falling or staying asleep?
- ☐ Feeling irritable or having angry outbursts?
- ☐ Having difficulty concentrating?
- ☐ Being
'super alert
' or watchful on guard?
- ☐ Feeling jumpy or easily startled?

Add point values from each response. Total Score = 0 DATE: 8-4-14

If you had a positive score on any of the above problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people? ☐ Not difficult ☐ Somewhat difficult ☐ Very difficult ☐ Extremely difficult

During the last 2 weeks have you had thoughts that you would be better off dead, or of hurting yourself in some way? ☐ Yes ☐ No

If

'Yes
' how often? ☐ Several days ☐ More than half the days ☐ Almost everyday.

Depression Screening:

- ☐ 1. Little Interest or pleasure in doing things
- ☐ 2. Feeling down depressed or hopeless
- ☐ 3. Trouble sleeping or sleeping too much
- ☐ 4. Feeling tired or little energy
- ☐ 5. Poor appetite or overeating
- ☐ 6. Feeling bad about self
- ☐ 7. Trouble concentrating on things
- ☐ 8. Moving or speaking slowly or being restless
- ☐ 9. Thoughts that you would be better off dead

Add point values from each response. Total (PHQ-9) Score = 7/27 on 8-4-14

Difficulty doing work, taking care of things at home, or getting along with other people? ☐ Not at all ☒ Somewhat ☐ Very ☐ Extremely.

Additional Screening Questions:

Are you having any thoughts about harming another person? denied
Do you feel like you are at risk for workplace violence? denied

Physical findings**General Appearance:**

° Alert. ° Well developed. ° Well nourished. ° In no acute distress.

Neurological:

° No disorientation was observed, oriented x3. ° No hallucinations. ° Memory was unimpaired. ° Remote memory was not impaired. ° Recent memory was not impaired. ° Judgement was not impaired.

Speech: ° Normal, regular rate, non-pressured. ° Rate was not slowed. ° Not pressured. ° Tone was not a monotone.

Psychiatric:

Demonstrated Behavior: ° Behavior demonstrated no abnormalities - appropriate and cooperative. ° No psychomotor retardation. ° Behavior demonstrated no psychomotor agitation. ° No decreased eye-to-eye contact was observed.

Mood: ° Euthymic. ° Not depressed. ° Not anxious.

Affect: ° Normal. ° Not labile. ° Not flat. ° Not constricted. ° Showed no irritability.

Thought Processes: ° Not impaired, they were linear, logical, and goal directed. ° Attention demonstrated no abnormalities.

° Attention span was not decreased.

Thought Content: ° Insight was intact. ° No delusions. ° No suicidal ideation. ° No suicidal plans. ° No suicidal intent. ° No homicidal ideations. ° No homicidal plans. ° No homicidal intent.

Neurovegetative Assessment: ° Dangerousness assessment: suicide risk Suicide Risk and Protective Factors Review:

Non-Modifiable:

- x Gender (risk factor if male):
- x H/O Suicide Attempts: age 17, bottle of aspirin

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

History of present illness

The Patient is a 29 year old male.

<<Note accomplished in Tri-Service Behavioral Health AIM>>

INITIAL ASSESSMENT 8-4-14: 29 year old SWM Navy, E-6, with 9 years TIS, 2 years at NIOC at Ft Meade, 2 years to go, not sure if he wants to stay in - will have to stay in or some time due to braces on teeth. Self referral. Patient believes that his family of origin is impacting on how he relates to others now that he is an adult. During the past month, he has experienced the following symptoms: anxiety or worries and difficulty concentrating. Patient 'picks' at his scalp. Has several dry patches where he has scraped/picked the hair out in circles. He has been doing this since 2009. He thinks it is a combination of dry skin and his picking at the scalp.

Nutrition: tries to eat healthy, goes out 1 X a week, has some family issues - father is large, has diabetes - does not want to turn out like him

Abuse: Father was physically abusive of sisters more so than with him. Dad also shaved patient's head when he was 17 because he thought Sm's hair was too long. Patient was allergic to animals, Father kept cats and dogs. SM used emergency inhaler 3 or 4 X a day.

Goals he would like to deal with: 1.) anxiety, 2.) past issues - family abuse (verbal, physical), 3.) new way of handling issues - rather than ignore them.

Visit is deployment-related Stress got to him while in Japan and stationed on ship 3/2006 - 4/2009.

Pain Severity 0 / 10.

S/O Note Written by YORK, CARLA M. @ 27 Jun 2014 1007 EDT**Chief complaint**

The Chief Complaint is: Anxiety.

Referred here

By PCM, Thomas S. Clark, FNP.

History of present illness

The Patient is a 29 year old male.

This is the patient's second visit to the IBHC clinic.

Source of information was self.

Feedback was provided to the PCM.

- Pt was given IBHC brochure describing the behavioral health program. Discussed with patient model of service to include the limits of confidentiality (i.e. abuse reporting, suicide intervention, etc.) and short-term intervention focused approach

- Pt indicated understanding.

Patient was seen for 30 minute IBHC appointment.

Previous history of visit is not deployment-related. No decrease in concentrating ability.

Pain Severity 0 / 10.

<<Note accomplished in TSWF-IBHC Anxiety tab>>

Progress and barriers in adhering to behavior change plan: work-related stress, on a 30 day assignment to 'fix

' a systems problem; feels that his symptoms have been evident since he was a child and therefore not likely to change with brief intervention

Changes in symptoms and/or functioning: reports some improvement in mood, anxious thoughts; however, that he continues to constantly think about getting tasks done, believes it traces back to his childhood and father's authoritarian parenting style

....

Anxiety Intervention:☐ Trained in relaxation strategies☒ Trained in improving communication skills☒ Discussed potential treatments for anxiety (i.e. PE, CPT, CBT)☒ Discussed various factors related to the development and maintenance of anxiety (including biological, cognitive, behavioral, and environmental factors).☐ Developed Crisis Response plan.☒ Trained in strategies for increasing balanced thinking.Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Personal history

Behavioral: Caffeine use 16 oz. Coffee per day; up to 32 oz. On weekend. No tobacco use in the last 10 years.

Alcohol: Alcohol use Occasional-approximately 3-5 drinks a week or less.

Review of systems**Systemic:** Feeling tired (fatigue).**Gastrointestinal:** Normal appetite.**Neurological:** No disorientation.**Psychological:** No sleep disturbances. Normal enjoyment of activities, a desire to continue living, not thinking about suicide, not having a suicide plan, and no stated intent to commit suicide. No homicidal thoughts, not thinking of a way to do it, and without a stated intent to kill. No frequent thoughts of death /morbid ideation and no impulsive behavior.**Physical findings****General Appearance:**

° Alert. ° Well developed. ° Well nourished. ° In no acute distress.

Neurological:

° No disorientation was observed - oriented to place, person, time, and situation. ° No hallucinations. ° Memory was unimpaired. ° Remote memory was not impaired. ° Recent memory was not impaired. ° Judgement was not impaired.

Speech: ° Normal - regular rate, non-pressured. ° Rate was normal. ° Rate was not slowed. ° Not pressured. ° Tone was not a monotone. ° Volume was normal. ° No articulation abnormalities. ° No language abnormalities were demonstrated.

Psychiatric:

Demonstrated Behavior: ° No decreased eye-to-eye contact was observed.

Attitude: ° Cooperative.

Mood: ° Euthymic. ° Not depressed. ° Not anxious.

Affect: ° Normal. ° Not labile. ° Not flat. ° Not constricted. ° Showed no irritability. ° Congruent with the mood.

Thought Processes: ° Not impaired - they were linear, logical, and goal directed. ° Evaluation of connectedness showed no deficiency. ° Attention demonstrated no abnormalities. ° Attention span was not decreased.

Thought Content: ° Insight was intact. ° No delusions.

Counseling/Education

Anxiety Recommendations for patient:

Continue with relaxation exercises as previously trained in initial session

Follow through with BH specialty care referral-appointment 4 AUG 14 at 1300-Psychology

F/U IBHC as needed

Anxiety Recommendations for PCM Team:

Encourage attendance at scheduled BH visit

Practice Management

Patient exercises-has started with physical therapy; previously was running 5+ miles per day, now starting physical therapy due to ankle sprain.

A/P Written by YORK, CARLA M @ 27 Jun 2014 1028 EDT**1. Anxiety 300.00:** Pt. Presenting with longstanding symptoms of anxiety; he has completed 2 sessions with the IBHC program.

Due to duration of symptoms, patient in agreement with recommendation at this time to participate in specialty BH treatment.

Referral placed and appointment made during session for 4 AUG 14.

Vitals**Vitals** Written by LAI, PHILOMENA C @ 27 Jun 2014 0753 EDT**Comments:** Patient has falls in the past 6 months, minor injury to L ankle. Patient is not a fall risk.**S/O Note Written by LAI, PHILOMENA C. @ 27 Jun 2014 1034 EDT****Chief complaint**

The Chief Complaint is: L ankle sprain

Visit for: Initial Evaluation

History of present illness: INITIAL EVALUATION (6/27/2014): Patient is a 29 y/o M referred to physical therapy for evaluation and treatment of L ankle sprain. Patient initially injured L ankle in April 2014 while he was sprinting during softball game when his L foot went into the hole. Since onset, symptoms have unchanged

Meds: reviewed in AHLTA.

Pain scale 72 hrs: current 0/10 best 0/10 worst 3/10

Description of pain: comes and goes

Aggravating factors: motion

Mitigating factors: rest, elevation, ice

Day pattern: episodic

Recent/previous treatment: none

Functional limitations: no running at this time, increased throbbing sensation after prolonged walking

Patient goals: to run again (patient used to run 5 miles per day 4-5 times per week).

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: [REDACTED] DoD ID: 1286180538 Created: 30 Oct 2017

Past medical/surgical history**Reported:**

Past medical history reviewed and discussed. Co-morbidities: none
 Diagnostics: x-ray L ankle in AHLTA
 Medical precautions: none
 Job duties: desk primarily.

Objective

Observation: genu and tibial varus, normal calcaneus alignment
 palpation: no TTP
 flexibility: mod tightness hamstrings, calf
 Joint Mobility: decreased L TC ant/post mob, STJ med/lat mob
 Sensation/Reflex: intact
 ROM: ankle: DF L 3 deg R 13 deg, PF L 28 deg R 50 deg, IV L 24 deg R 35 deg, EV L 6 deg R 15 deg, 1st ray ext L 56 deg R 70 deg, flex L 25 deg R 30 deg
 Strength: DF - 5/5 bil, PF 5/5 bil, IV L 4+/5 R 5-/5, EV L 4+/5 R 5/5
 Special Tests: thompson - neg, talar tilt - neg, ant/post drawer - neg
 function: gait - no significant deviations, SLS EO - L/R = 30 sec, good ankle stability bil, SLHR L 25/25 R 25/25, no instability noted.

Tests

Assessment (6/27/2014): Patient presented with decreased L ankle ROM s/p ankle sprain, mild weakness of ankle IV and EV with no instability. Patient would benefit from physical therapy home based ex program to improve ROM and strength.
 Rehab prognosis: good

Physical Therapy goals:

STG to be achieved in 3 weeks
 Patient to be independent with HEP
 Patient to increase ROM to: L ankle DF 10 deg, PF 40 deg, IV 35 deg EV 10 deg

LTG to be achieved in 6-8 weeks

Decrease pain to: 0/10

Increase MMT to: 5/5

Improve function to: tolerate long distance walking without increased in symptoms
 running 1 mile 50% pace with no increased in symptoms

Patient education: Patient educated on his/her condition in reference to pertinent anatomy and biomechanics using anatomical models and illustrations, self care, physical therapy and POC.

HEP instructions and performance (15 min): stretch - hamstrings, calf, joint mobilization for DF/PF, ROM, alphabets

Plan of Care: Patient has consented to physical therapy treatment. Patient to perform HEP indep. Follow up in 6 weeks..

S/O Note Written by O'SULLIVAN, ROBIN R @ 16 Jun 2014 1505 EDT**Chief complaint**

The Chief Complaint is: Anxiety.

Referred here

By PCM, Thomas S. Clark, FNP.

History of present illness

The Patient is a 29 year old male.

This is the initial visit to the IBHC clinic.

Source of information was self.

Feedback was provided to the PCM.

- Pt was given IBHC brochure describing the behavioral health program. Discussed with patient model of service to include the limits of confidentiality (i.e. abuse reporting, suicide intervention, etc.) and short-term intervention focused approach

- Pt indicated understanding.

Patient was seen for 30 minute IBHC appointment.

Normal appetite.

Sleep disturbances.

Previous history of visit is not deployment-related. No decrease in concentrating ability.

Pain Severity 3 / 10 (dental and ankle).

<<Note accomplished in TSWF-IBHC Anxiety tab>>

Description of Symptoms:

Anxiety symptoms include irritable bowel, anxious mood, biting nails, picking hair, attentional difficulties, irritable, insomnia. No issue with sleep onset, but difficulty with sleep maintenance (averaging 5 - 8 hours in bed, but awake much of that time; Pt estimated 3 - 4 hrs sleeping).

Duration of Problem:

Since age 14 has experienced most of symptoms of anxiety listed above, with exception of hair difficulty (began August 2011).

Factors correlated with onset: Pt described difficult childhood and home environment (father alcoholic & harsh disciplinarian, mother bipolar). More recently, Pt spent 850 days at sea over 3 years & had mersa 3xs during this, contributing to scalp/hair picking. Currently, Pt was selected for new job which is high stress, with increased responsibility, leadership and management duties (would prefer to do computer work in isolation). Pt is considering separation (eligible in 2 years) due to dissatisfaction with Navy, but anxious about alternative future options;

Frequency of symptoms: daily and pervasive throughout the day.

Severity of symptoms: Very difficult - able to perform well at work but is uncomfortable by feeling anxious and inability to relax.

Course of problem: slightly worse lately, which Pt attributed to recent dispute with girlfriend and increasing work-related stress.

Psychosocial factors: Stress from work enhances a preexisting anxious tendency; Pt described his relationship with his girlfriend as conflict avoidant and desires it to have more honest communication.

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Page 947

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Aggravating factors: over-planning, anxious ruminating thoughts; obsessively planning procedures to optimize efficiency; rigid with cleaning at home.

Alleviating factors: Drinking coffee is reported to be helpful; Reading technical material and computer programming; alone time and spending time with his girlfriend.

Current tx: Pt stated has he has avoided seeking help for fear of impacting career.

Past tx: Pt received therapy for about 18 months at Ft Meade and found this helpful.

Functional impact: Pt stated it is hard to enjoy free time and is constantly stressed at work.

....
Anxiety Intervention:

☐ Trained in relaxation strategies

☒ Trained in improving communication skills

☒ Discussed potential treatments for anxiety (i.e. PE, CPT, CBT)

☒ Discussed various factors related to the development and maintenance of anxiety (including biological, cognitive, behavioral, and environmental factors).

☐ Developed Crisis Response plan.

☒ Trained in strategies for increasing balanced thinking.

☐ Other:

Personal history

Behavioral: Caffeine use 2 - 4 cups / coffee daily, rare energy drinks. No tobacco use in the last 10 years.

Alcohol: Alcohol use 2-3 drinks / week.

Review of systems

Systemic: Not feeling tired (fatigue).

Neurological: No disorientation.

Psychological: Normal enjoyment of activities, a desire to continue living, not thinking about suicide, not having a suicide plan, and no stated intent to commit suicide. No homicidal thoughts, not thinking of a way to do it, and without a stated intent to kill. No frequent thoughts of death / morbid ideation and no impulsive behavior.

Physical findings**General Appearance:**

° Alert ° Well developed. ° Well nourished. ° In no acute distress.

Neurological:

° No disorientation was observed - oriented to place, person, time, and situation. ° No hallucinations. ° Memory was unimpaired. ° Remote memory was not impaired. ° Recent memory was not impaired. ° Judgement was not impaired.

Speech: ° Normal - regular rate, non-pressured. ° Rate was normal. ° Rate was not slowed. ° Not pressured. ° Tone was not a monotone. ° Volume was normal. ° No articulation abnormalities. ° No language abnormalities were demonstrated.

Psychiatric:

Demonstrated Behavior: ° No decreased eye-to-eye contact was observed.

Attitude: ° Cooperative.

Mood: ° Anxious. ° Euthymic. ° Not depressed.

Affect: ° Normal. ° Not labile. ° Not flat. ° Not constricted. ° Showed no irritability. ° Congruent with the mood.

Thought Processes: ° Not impaired - they were linear, logical, and goal directed. ° Evaluation of connectedness showed no deficiency. ° Attention demonstrated no abnormalities. ° Attention span was not decreased.

Thought Content: ° Insight was intact. ° No delusions.

Tests**General:**

Test Results:	Value	
PHQ-9 Score	5

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

The patient completed the DUKE Health Profile, a 17-item measure of health-related quality of life. On this measure, scores range from 0 to 100, with higher scores indicating better health status.

Mental Health score was 2 standard deviations or more below the mean indicating a lower score than about 98% of others of similar age and gender.

Social Health score was 2 standard deviations or more below the mean indicating a lower score than about 98% of others of similar age and gender.

General Health score was 2 standard deviations or more below the mean indicating a lower score than about 98% of others of similar age and gender.

• DEPRESSION SCREENING / MONITORING (PHQ-9)

- [0] Little Interest or pleasure in doing things
 [1] Feeling down depressed or hopeless
 [2] Trouble sleeping or sleeping too much
 [0] Feeling tired or little energy
 [0] Poor appetite or overeating
 [0] Feeling bad about self
 [0] Trouble concentrating on things
 [2] Moving or speaking slowly or being restless (circled fidgety & restless)
 [0] Thoughts that you would be better off dead

Add point values from each response and document in the box below.

Difficulty doing work, taking care of things at home, or getting along with other people?

[] Not at all [x] Somewhat [] Very [] Extremely

Thoughts that you would be better off dead: [] Yes [x] No

....

Generalized Anxiety Disorder Screening:

- [3] 1. Feeling nervous, anxious, or on edge
 [2] 2. Not being able to stop or control worrying
 [3] 3. Worrying too much about different things
 [3] 4. Trouble relaxing
 [1] 5. Being so restless that its hard to sit still
 [3] 6. Becoming easily annoyed or irritable
 [0] 7. Feeling afraid as if something awful might happen

Add point values from each response and document in the box below. 15

Difficulty doing work, taking care of things at home, or getting along with other people?

[] Not at all [x] Somewhat [] Very [] Extremely

....

5. Follow up in two weeks with IBHC (Dr. York, 27 June 2014, 10:00 a.m.)

Anxiety Recommendations for PCM Team: Support Pt in implementing above recommendations

....

A/P Last updated by JARRETT, ERICA M @ 20 Jun 2014 1414 EDT

1. GENERALIZED ANXIETY DISORDER: Pt was seen for a 30 minute initial consultation to address symptoms of anxiety. Pt meets diagnostic criteria for Generalized Anxiety Disorder: (inability to control excessive worry with restlessness, fatigue, difficulty concentrating, irritability, and sleep disturbance more days than not for longer than the past 6 months). Pt recalls times in his past that he self-isolated and avoided social encounters due to anxiety and feels his chronic worry negatively impacts his functioning. Pt is in the preparation stage of change in managing his anxiety, to include attending initial consultation with psychiatric and behavioral health providers for further treatment. In the meantime, Pt received education on relaxation techniques and agreed to implement the following interventions:

1. Follow-up with individual psychotherapy and psychiatric consultation at Outpatient Adult Behavioral Health at WRNMMC.
2. Diaphragmatic breathing (3 x / day, 10 - 20 breathes)
3. Read handouts on anxiety, disputing cognitive distortions, and relaxation.
4. Read handout on sleep and download CBT-i Coach app.
5. Follow up in two weeks with IBHC (Dr. York, 27 June 2014, 10:00 a.m.)

2. NEUROTIC EXCORIATION: Per DSM-V, excoriation disorder is a separate diagnosis. Pt routinely picks his skin on the back of his scalp and has created a bald spot larger than the size of a quarter. Pt reported this behavior initially began with Folliculitis a few years ago, but has persisted and occurs whenever he feels anxious.

Disposition Last Updated by JARRETT, ERICA M @ 20 Jun 2014 1415 EDT

Released w/o Limitations

Follow up: as needed in 2 week(s) with PCM and/or in the HEALTH PROMOTION CL BE clinic or sooner if there are problems. -

Comments: Follow up scheduled for 27 June 2014 at 1000 with Dr. York.

Discussed: Diagnosis, Medication(s)/Treatment(s) with Patient who indicated understanding.

30 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

 left ankle

SO Note Written by DOUGHERTY, DIANA L @ 04 Jun 2014 0855 EDT**Chief complaint**

The Chief Complaint is: L ankle swelling.

History of present illness

The Patient is a 29 year old male.

<<Note accomplished in TSWF-CORE>>

Pt is 24 yo AD navy who presents with c/o L ankle swelling/pain that has persisted since injury 15 April 2014. He reports that while playing softball, he sustained injury that involved forward force of the foot into a hole while playing softball. At that time, he was evaluated in the ER, found to have no e/o fracture on XR, and given a brace and crutches. He used the brace for approx 2 weeks, and the crutches for approx 4 at which point he was able to bear weight with minimal pain. Repeat XR obtained by his PCM in early May continued to demonstrate no e/o fracture.

Today, he presents because of ongoing aching pain at the ankle joint and forefoot, associated with swelling localized to the ankle. He denies sharp pain or point tenderness, and is able to bear weight. However ROM is limited, and pain exacerbated particularly with dorsiflexion. He has been unable to obtain a timely appointment with his primary provider, and needs exemption from PT.

No localized joint pain and no localized joint swelling. No sensory disturbances.

Current medication

Ibuprofen prn

Past medical/surgical history**Reported:**

Medical: Reported medical history
 reviewed, noncontributory.

Review of systems**Musculoskeletal:** No knee symptoms.**Physical findings****Vital Signs:**

• Temperature: Reviewed. • RR: Reviewed. • PR: Reviewed. • Blood pressure: Reviewed.

General Appearance:

• Normal. • Well developed. • Well nourished. • In no acute distress.

Head:

Injuries: • No evidence of a head injury.
 Appearance: • Head normocephalic.

Cardiovascular:

Arterial Pulses: • Dorsalis pedis pulses were normal and PT pulses intact.

Musculoskeletal System:**Knee:**

Right Knee: • No effusion. • No tenderness on palpation.
 Left Knee: • No effusion. • No tenderness on palpation.

Lower Leg:

Right Leg: • Calf was not swollen. • Leg exhibited no warmth. • No erythema. • No tenderness on palpation.
 Left Leg: • Calf was not swollen. • Leg exhibited no warmth. • No erythema. • No tenderness on palpation.

Ankle:

Right Ankle: • No swelling. • No erythema. • Ankle was not warm. • No misalignment. • No tenderness on palpation.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

° Motion was normal. ° No pain was elicited by motion. ° Ankle was not tender on ambulation.

Left Ankle: • Swelling localized to ankle, both medial and lateral aspects. • Tenderness on palpation aching tenderness at both lateral and medial malleoli. No point tenderness. • Motion was abnormal decreased ROM with dorsiflexion, inversion, eversion. • Pain was elicited by motion. • Ankle was tender on ambulation. ° No erythema. ° Ankle was not warm. ° No misalignment.

Foot:

Right Foot: • Pes planus. ° No erythema. ° No tenderness on palpation.

Left Foot: • Examined resolving ecchymosis. Foot warm, well perfused with 2+ distal pulses. • Pes planus. • Tenderness on palpation aching tenderness of forefoot. No point tenderness. ° No erythema. ° No abnormal warmth. ° No deformity.

Functional Exam:

General/bilateral: • Mobility was limited.

Neurological:

Motor (Strength): ° No weakness of the right ankle was observed. ° No weakness of the left ankle was observed.

A/P Last Updated by DOUGHERTY, DIANA L @ 04 Jun 2014 0939 EDT

1. **ANKLE SPRAIN LEFT:** Residual ankle swelling and limited ROM 6 weeks s/p injury resulting in ankle sprain. It is not unexpected to have these residual symptoms, and XR imaging on 2 occasions has failed to demonstrate fracture. No e/o neurovascular compromise. Patient improving, but not yet back to baseline.

* chit provided for light duty/no PT/no running or prolonged standing walking x7 days

* pt instructed to follow-up with his primary for ongoing treatment and profile, if needed

* physical therapy consult for assistance with re-gaining ROM

* patient counseled to avoid activities which cause pain, and to elevate/ice ankle as needed

Consult(s): -Referred To: PHYSICAL THERAPY MTF BE (Routine) Specialty: THERAPY, PHYSICAL Clinic: PHYS THERAPY CL BE Provisional Diagnosis: ANKLE SPRAIN LEFT

History:

Running and stepped in hole c/o left ankle/foot pain and swelling. R/o fx

Technique:

Frontal, oblique, and lateral radiographs of the left foot and ankle

Comparison: None available

Findings:

No acute fracture or dislocation. Osseous alignment and mineralization is normal. Joint spaces are preserved. The ankle mortise and talar dome are intact. A small developing plantar calcaneal spur is identified. No significant degenerative or erosive changes are seen. There is mild soft tissue edema overlying the lateral malleolus.

Impression:

Mild soft tissue edema overlying the lateral malleolus without evidence of acute osseous abnormality.

Abdomen:

Visual Inspection: ° Abdomen was not distended.
 Auscultation: ° Bowel sounds were not diminished or absent.
 Palpation: ° No abdominal tenderness. ° No mass was palpated in the abdomen.
 Liver: ° Normal to palpation.
 Spleen: ° Normal to palpation.

Musculoskeletal System:

General/bilateral: ° Normal movement of all extremities.
 Other:
 General/bilateral: ° No muscle tenderness.

Neurological:

Sensation: ° No sensory exam abnormalities were noted. ° Monofilament wire test of the foot did not show decreased sensation.
 Motor: ° Strength was normal.
 Coordination / Cerebellum: ° No coordination/cerebellum abnormalities were noted.
 Balance: ° Normal.
 Gait And Stance: ° Normal.
 Reflexes: ° Deep tendon reflexes were normal.

Psychiatric:

Mood: ° Euthymic.
 Affect: ° Normal.

Skin:

° Skin: MILD SCALY REDNESS, SOLE OF FEET AND ONE SPOT ON THE SCALP, ° Lesions. ° Showed no ecchymosis.
 ° Temperature was normal.

A/P Written by UDE ASSUMPTA O @ 10 Apr 2013 1223 EDT

1. visit for: military services physical(PERIODIC PREVENTION EXAMINATION): I have reviewed all formatted and free text responses on the DD Form 2766. A review of age and gender appropriate preventive medicine task force items were discussed with SM. Included are cancer screening/prevention, CAD, and injury prevention. IN order to reduce TRIGLYCERIDE AND FBS in prediabetes, It was recommended to exercise 160 minutes per week at 80% of the Max heart rate minimum, this does not count warm up and cool down.

2. ANOMALIES OF SKIN: REFERRAL TO DERM

The Chief Complaint is: NAVY PHA.

History of present illness

The Patient is a 28 year old male.

A PHA has been completed in past year. Date: 10 APR 2013.

In the Navy and currently on active duty. Visit is not deployment-related.

Good general overall feeling.

Pain Severity 0 / 10.

Patient feels safe at home.

Patient has NOT had specialty care, ER visit, or hospitalization since last visit.

Allergies

Current Allergies: NKDA.

Current medication

NO CURRENT MEDS.

Past medical/surgical history**Reported:**

Medical: Reported medical history Asthma

Dyspnea

Skin neoplasm of uncertain behavior

Rosacea

Lattice peripheral retinal degeneration

Myopia

Allergic rhinitis

Exposure to venereal disease

Personal history

Behavioral: No tobacco use in the last 10 years.

Alcohol: Alcohol use AUDIT-C Date: 11/05/2012.

History

ANNUAL SCREENING DATE: 18 JAN 2013

SO Note Written by COPSEY, HELEN C @ 24 Oct 2012 0936 EST**Reason for Visit**

Visit for: R/O of IBD.

History of present illness

The Patient is a 27 year old male.

This is a WM, AD PO2, who presents for R/O of IBD. He reports a long history of presumed IBS presenting with intermittent lower abdominal cramping that occurs several times per week, and is triggered by dairy intake, anxiety, and physical activity. This can be associated with looser stool and mild urgency, although in general he reports a soft stool each day. An evaluation for these symptoms along with isolated BRBPR in 2005 (IL) includes a CT scan showing moderate stool retention in the colon, and a flex sig that was reportedly limited d/t patient discomfort. He denies any rectal bleeding since that time. He does endorse occasional oral aphthi but otherwise denies any additional complaints. His weight has been stable.

Earlier this month he experienced worsening of his baseline abdominal pain, possibly precipitated by consuming a milk-shake. A CT in the ER showed focal colitis at the right colon (hepatic flexure) with fecalization of the small bowel, concerning for IBD. CRP was 1.2, labs otherwise nl. A follow-up colonoscopy with Dr. McNally showed cogested appearing mucosa in the left colon. Images of the right colon/ cecum are limited due to liquid stool, and the TI was not intubated per report. Biopsies are pending. The patient reports self-resolution of the pain, and has since been feeling back to baseline.

Allergies

ASA- (nausea).

Past medical/surgical history

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Past medical history

- Allergic asthma (cats); Headache, NOS

Surgical / Procedural: Prior surgery

- PRK, Tonsillectomy

Medications: Medication history

- Albuterol, Aleve prn (less than once per week)

(I personally reviewed the medication history, allergy history and compliance with medications with this patient)

Surgical:

Pre-op ASA class 1

Previous therapy

History of possible limitations and risks do not include complications from anesthesia

Personal history

Tob: (-)

Etoh: (2 drinks every other day)

Drug use: (-)

Family history

No chronic liver disease

No malignant neoplasm of the large intestine

No malignant neoplasm of the gastrointestinal tract

No known FH of IBD, autoimmune diseases.

Review of systems

Systemic: Not feeling tired (fatigue). No fever, no chills, no night sweats, and no recent weight loss.

Head: No headache.

Eyes: No vision problems.

Otolaryngeal: No hoarseness, no lump in the throat, and no mouth sores.

Cardiovascular: No chest pain or discomfort and no palpitations.

Pulmonary: No dyspnea and no cough.

Gastrointestinal: No dysphagia, no pain on swallowing, no heartburn, no regurgitation, no early satiety, no nausea, no vomiting, no hematemesis, no hematemesis ('coffee grounds'), no abdominal swelling, no jaundice, no recent increase in bowel frequency, and not decrease. No tenesmus, no melena, no hematochezia, no acholic stools, no steatorrhea, and stool diameter is not smaller. No change in consistency of stool and no nocturnal diarrhea. No rectal pain.

Genitourinary: No urinary symptoms.

Endocrine: No endocrine symptoms.

Hematologic: No tendency for easy bruising.

Musculoskeletal: No arthralgias, new. No nonspecific pain, swelling, and stiffness.

Neurological: No confusion and no memory lapses or loss.

Psychological: Mood was euthymic and no sleep complaints.

Skin: No pruritus, no change in skin texture, new, and no rash, new.

Physical findings**Vital Signs:**

° Current vital signs reviewed.

Standard Measurements:

° Patient was not observed to be obese.

General Appearance:

° Awake. ° Alert. ° Oriented to time, place, and person. ° Well developed. ° Well nourished. ° In no acute distress. ° Patient did not appear uncomfortable. ° Not acutely ill. ° Not chronically ill.

Neck:

Appearance: ° Of the neck was normal.

Eyes:

General/bilateral:

Sclera: ° Showed no icterus.

Oral Cavity:

° Normal OP clear, Mallampati score = 1.

Chest:

° Visual inspection revealed no abnormalities.

Lungs:

° Normal CTA B.

Cardiovascular:

° System: normal RRR, no M or G.

Abdomen:

° Normal soft, NT/ND, +BS.

Neurological:

° Level of consciousness was normal.

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 30 Oct 2017

Speech: ° Normal.
Gait And Stance: ° Normal.

Psychiatric:

Mood: ° Euthymic.
Affect: ° Normal.
Thought Processes: ° Not impaired.

Skin:

° General appearance was normal. ° No jaundice. ° No skin lesions.

Therapy

• Medical regimen review – medication reconciliation performed.

ba/DICTATION DATE: 23 November 2005

CT SCAN OF THE ABDOMEN AND PELVIS WITH CONTRAST:

Technique: 7.5 mm cross-sectional images of the abdomen and pelvis were obtained following oral and intravenous introduction of contrast.

Findings: There is a normal appearance of the liver, spleen, and pancreas. There is no gallstones. No dilatation of biliary ducts or pancreatic duct identified. There is no enlargement of the adrenal glands. There is no hydronephrosis. No renal stones are seen. There is no lymphadenopathy. No abnormal collection of fluid in the abdomen or pelvis identified. Moderate amount of fecal material noted throughout the colon. There is no changes of appendicitis. No aneurysmal dilatation of the abdominal aorta noted. There is no signs of bowel obstruction.

IMPRESSION: NORMAL COMPUTED TOMOGRAPHY OF THE ABDOMEN AND PELVIS.**MODERATE AMOUNT OF FECAL MATERIAL THROUGHOUT THE COLON.**Rad Result Cited by COPSEY, HELEN C @ 24 Oct 2012 0956 EST**MERWIN, DANIEL DENNIS 20 [REDACTED] 27yo [REDACTED] 1985 M**

Supervised By: BERNARD, JACQUELINE, MD, CDR, USN
Supervised By Date: 11-Oct-2012 08:16:00
Amended Report Text:

ADDITIONAL HISTORY: Abdominal pain.

TECHNIQUE: CT of the abdomen and pelvis was performed under standard abdomen/pelvis CT protocol with 5 mm axial helically acquired images obtained from the level of the diaphragm to the level of the pubic symphysis after the intravenous administration of 110 mL Isovue 370 and oral contrast. Coronal and sagittal reformatted images were also obtained.

COMPARISONS: Acute abdominal series 10/10/12.

FINDINGS:

Lung bases are clear.

Liver parenchyma and vasculature is unremarkable. Normal biliary tree without intra-or extrahepatic biliary ductal dilatation. Pancreas, spleen, adrenals, and kidneys are normal. No identifiable ureteral abnormalities. Fluid-filled urinary bladder is unremarkable.

Enteric contrast visualized to the level of the mid ileum. Stomach is normal. There is fecal material and air noted within the distal ileum extending to a mildly distended stool filled cecum. The appendix is identified and is normal. There is a focal area of vascular prominence involving the mesentery at the level of the hepatic flexure. The colon wall at this level appears mildly thickened but otherwise decompressed. The colon distal to the hepatic flexure is decompressed and normal in appearance.

Shotty subcentimeter mesenteric lymph nodes about the upper abdomen. No intra-abdominal mass or fluid collection. Vascular structures are normal in configuration.

Pelvic organs are unremarkable. No free pelvic fluid. No pelvic or inguinal lymphadenopathy.

Soft tissues, muscles, and osseous structures are unremarkable.

IMPRESSION:

Focal colitis at the level of the hepatic flexure with proximal stool retention and fecalization of small bowel. Findings are nonspecific and may be representative of an acute infection or inflammatory etiology such as Crohn's disease. Clinical correlation is recommended.

Note: Findings above were discussed with Dr. Hardware, via telephone at 0450 hours on 10/11/12.

Electronically signed by resident: Dr. JOSEPH G MOLLURA Date: 10/11/12

A/P Last Updated by COPSEY, HELEN C @ 24 Oct 2012 1002 EST

1. Imaging Studies Nonspecific Abnormal Findings: CT concerning for colitis and fecalization of SB ? radiographic artifact, constipation, acute vs. chronic inflammation, stenosis. Colonoscopy with limited evaluation of right colon, ICD, distal ileum.

Recommend MRE for further evaluation of small bowel as d/w Dr. Kikendall. He may ultimately require repeat colonoscopy, however will await biopsy results prior to determining next steps. Patient voices understanding/ agreement.

2. abdominal pain: Patient with long history of intermittent abdominal pain ? due to IBS vs. dietary intolerance vs. inflammatory. Will proceed with evaluation to r/o IBD, however if negative encouraged patient to continue f/u with GI for management of chronic symptoms.

Disposition Last Updated by COPSEY, HELEN C @ 24 Oct 2012 1003 EST

Released w/o Limitations

Follow up: in the GI INFLAM BOWEL DIS BE clinic. - Comments: Will call pt 850-602-8501 after obtaining pathology and discussing need for repeat colonoscopy with IBD staff.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. - Comments:

45 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

Note Written by BROWN, CANDICE C @ 23 Oct 2012 0738 EST

Consult Order

Referring Provider: SALTER, CAROLYN A

Date of Request: 12 Oct 2012

Priority: ASAP

Provisional Diagnosis:

IBD vs mass

Reason for Request:

27 y/o male w/ ascending colon inflammation s/p colonoscopy 12 OCT. Pt needs GI f/u to discuss results.

Signed By COPSEY, HELEN C (PA-C, MSHS, WRAMC- GI Clinic) @ 24 Oct 2012 1003

Note Written by COPSEY, HELEN C @ 24 Oct 2012 1004 EST

(Added after encounter was signed.)

PATH

PATH

Spoke with Dr. Barner re: patient's pathology results- not yet placed into CHCS. Biopsies of left-colon show benign colonic mucosa, without active inflammation, chronicity or architectural distortion.

Note Written by COPSEY, HELEN C @ 08 Nov 2012 1503 EST

(Added after encounter was signed.)

MRE results

MRE d/w patient- essentially nl specifically right colon/T1, will review at IBD conference. Pt denies any continued pain. Will defer repeat COLO for now, however reconsider pending progress. Would re-check CRP, which should be down from hospitalization. Pt v/u.

Chief complaint

The Chief Complaint is: PHA, works at NIOC.

History of present illness

The Patient is a 27 year old male.

<<Note accomplished in TSWF CORE>>

Presents for PHA. Denies complaints or concerns.

Review of systems

Systemic symptoms: No fever and no chills.

Head symptoms: No headache.

Cardiovascular symptoms: No chest pain or discomfort.

Pulmonary symptoms: No cough.

Gastrointestinal symptoms: No nausea, no vomiting, no abdominal pain, no diarrhea, and no constipation.

A/P Written by TREVEN, LAUREN A @ 06 Mar 2012 1524 CDT

1. visit for: occupational health / fitness exam (PERIODIC PREVENTION EXAMINATION): Annual TB risk assessment completed with responses determined to be minimal risk. No further testing recommended. See NAVMED 6224/8.

Record review completed. Reviewed deployment health history and individual medical readiness. Counseling on avoidable health risk factors and screening per clinical preventive service guidelines provided.

Member completed Fleet and Marine Corps Health Risk Assessment. Counseled on identified risks.

Counseled on lab results for PHA and discussed at length ways to improve through lifestyle changes; exercise, weight management, supplements and better nutrition. Teaching materials given. Encouraged follow-up with PCM for any health problems or concerns as needed.

Medically fit for full duty.

PHA complete

SO Note Written by STANDLEY, CHAD J @ 02 Nov 2011 1424 CST

History of present illness

The Patient is a 26 year old male.

Barriers to learning were identified as: None.

Allergies

Allergy information in Autocite area was reviewed and verified with patient.

Current medication

See med list.

Past medical/surgical history**Reported History:**

Reported medications: No medication history including current prescription medications; over-the-counter medications; nutraceuticals; herbals; supplements and medications not included in AHLTA were reviewed with patient in detail.

Taking medication and no contraindications to live vaccine were noted on medication reconciliation.

Physical findings

Patient monitored 15 minutes for adverse reaction/complications.

Counseling/Education

Education appropriate to the patient's needs was provided regarding the care/treatment/services provided. The patient or guardian voiced understanding and all questions were answered.

Appropriate Vaccine Information Statements were given. Patient was identified using two forms of identification (name and prefix and sponsor's social security number)

Pain control was discussed.

The patient or guardian was instructed to wait for 15 minutes in the waiting room after vaccines were administered.

Chief complaint

The Chief Complaint is: Follow up PFTs.

History of present illness

The Patient is a 26 year old male.

He reported: Feeling fine, Excellent, Very Good or Good.

Pain Severity 0 / 10.

Pt is a 26 yo male who presents for follow up of pulmonary function tests. He was last seen in March 2011. Since that time he has done well. He exercises regularly without difficulty. He will have occasional chest tightness when around cats, but other wise is asymptomatic. He presents today for routine follow up.
Patient feels safe at home.

Allergies

Current Allergies Reviewed.

Current medication

Advair diskus pm.

Past medical/surgical history

Reported History:

Past medical history Past Medical History:

- 1) childhood asthma
- 2) allergies.

Personal history

-Tob: none

-EtOH: none.

Behavioral history: No tobacco use in the last 10 years.

Alcohol: Not using alcohol Screening Date:

History ANNUAL SCREENING DATE:

Review of systems

Systemic symptoms: Not feeling tired or poorly, not tiring easily, and no lethargy. No fever and no chills.

Head symptoms: No sinus pain.

Pulmonary symptoms: No dyspnea, no cough, and no wheezing.

Physical findings

Vital signs:

* Current vital signs reviewed.

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538

Created: 30 Oct 2017

General appearance:

° Well-appearing. ° Awake. ° Alert. ° In no acute distress.

Tests

Laboratory studies:

Pulmonary Function Tests:

Pulmonary function tests were performed on 17MAR11 and revealed normal spirometry, very mild decrease in TLC, and a normal DLCO. Following the administration of 16mg/ml of methacholine there was a significant decrease in FEV1 consistent with a positive methacholine challenge.

A/P Written by LEWIS, CHRISTOPHER T @ 26 Jul 2011 1135 CDT

1. **ASTHMA (ASTHMA, UNSPECIFIED, MILD):** Pt with a symptom complex and positive high dose methacholine challenge test consistent with mild intermittent asthma. His symptoms are confined to allergen exposure, particularly to cats. Given the mild intermittent nature of his disease, he does not require a controller medicine, and will be treated with prn albuterol alone. He was counseled on allergen avoidance. No further workup is required. He is FIT FOR FULL DUTY WITHOUT RESTRICTIONS, and FIT FOR WORLD WIDE DEPLOYMENT WITHOUT RESTRICTIONS. Follow up in 6 months.

Disposition Written by LEWIS, CHRISTOPHER T @ 26 Jul 2011 1135 CDT

Released w/o Limitations

Signed By LEWIS, CHRISTOPHER T (Physician, NH Pensacola FL) @ 26 Jul 2011 1135

A/P Written by ROPP, CORBY D @ 29 Mar 2011 1446 CDT

1. visit for: preoperative exam: The risks and benefits and CRS alternatives eligible for this patient were discussed including PRK/LASIK options.

PRK was discussed as use of a brush to create a large abrasion like defect which will take several days to heal with aid of a CL. Potential of pain/discomfort was mentioned. Risks of haze which may cause loss of best vision was discussed. Significantly slower visual recovery than LASIK (up to 6 months) worsening of dry eye or causing dry eye, and infection were discussed. Glare and

Medical Record

Created: 30 Oct 2017

halos, new dry eye that may persist for 6 months or longer was mentioned. The use of MMC as surgeon preference in order to minimize risk of corneal haze development was discussed as well as it's unknown long-term effects on the cornea and that it is not FDA approved for CRS. It was mentioned that the Navy has a long history of successful application of MMC with much less haze formation and minimal side effects.

The LASIK option was discussed as creation of a corneal flap which establishes a thinner corneal structure than PRK, but faster and less painful visual recovery. The lesser risk of haze was mentioned. The potential for re-lifting the flap if necessary for debris, folds, or re-treatment and risk for epithelial down-growth was discussed. The risk of flap dislocation although small was discussed. The risk for flap infection although small was discussed. The risk of worsening or creation of dry eye symptoms due to the corneal incision, as well as glare and halos at night during the healing process were discussed. The risk of worsened dry eye with age was also discussed, and that its long-term effects not known. The risk for multiple suction loss events, even during flap creation w/ potential for resultant aberrations was discussed.

It was mentioned that people who have either PRK or LASIK are generally happy and most would recommend to a friend w/ a few exceptions

After a discussion of the risks and benefits the patient elected to have PRK with MMC application.

Procedure(s): -Ophthalmological New Patient Start Comprehensive Care x 1
-Determination Of Refractive State x 1
-Corneal Pachymetry Both Eyes x 1
-Scanning Computerized Ophthalmic Diagnostic Imaging Anterior Segment, Unilateral x 2 (50-BILATERAL PROCEDURE) - WaveScan, low RMS, okay for Allegretto
PentaCam - nl A/P floats and Belin-Ambrosio scans ou - Hard copy on file on system - no printer ink
-Computerized Corneal Topography x 1

2. REFRACTIVE ERROR - MYOPIA

Disposition Written by ROPP,CORBY D @ 29 Mar 2011 1446 CDT

Released w/o Limitations

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding.

Note Written by CORDOVA,CARLOS @ 29 Mar 2011 1219 CDT

Consult Order

Referring Provider: ZENT, JOHN W

Date of Request: 16 Mar 2011

Priority: Routine

Provisional Diagnosis:

Lattice peripheral retinal degeneration

Reason for Request:

Clinic will make appointment.CRS, please eval peripheral retinal lesion OD for correct diagnosis and possible laser retinopathy.

Comments

Interpretation

Pulmonary function test results are consistent with normal lung volumes and normal airflow. No evidence of obstructive or restrictive lung disease. The patient's results are within normal limits for age, sex, and height.

Robert Merges, CPT MC USN, Pulmonologist Internal Medicine

Christopher Lewis, CDR MC USN, Pulmonologist

Reason for Visit

Visit for: military services physical.

History of present illness

The Patient is a 26 year old male. Source of patient information was patient.
Barriers to learning were identified as: None
Possible barriers include cultural; religious; emotional; motivational; physical; and cognitive.
Reliability of source of patient information was good.
In the Navy and currently on active duty. Visit is not deployment-related. Paygrade E5.

Past medical/surgical history

Reported History:

Surgical / procedural: Surgical / procedural history reviewed and updated in Patient's Problem List.
Reported medications: Medication history reviewed and updated in Medication module.
Physical trauma: No trauma to the eye.

Diagnosis History:

No glaucoma.
No hypertension.
No hyperlipidemia.
No diabetes mellitus

Family history

Family medical history: Reviewed in Problem List.

Review of systems

Cardiovascular symptoms: No cardiovascular symptoms.

Pulmonary symptoms: No pulmonary symptoms.

Physical findings

Eyes:

General/bilateral:

Visual Assessment: • Lensometry:
OD: -2.25 -0.50 x103
OS: -2.50 -0.25 x069.

Right eye:

Visual Assessment:	Value
Distance right acuity with current Rx: 20/	20

Left eye:

Visual Assessment:	Value
Distance left acuity with current Rx: 20/	20

Counseling/Education

Education appropriate to the patients needs was provided regarding the care/treatment/services provided. The patient voices understanding and all questions were answered.

A/P Last Updated by ZENT, JOHN W @ 16 Mar 2011 1351 CDT

1. Myopia

Procedure(s): -Ophthalmological Prior Patient Start Intermediate Level Care x 1
-Determination Of Refractive State x 1

2. Lattice peripheral retinal degeneration: Likely flat retinoschisis, difficulty observing today even with 3-mirror funduscopy. Best view with BIO/scleral depression.

Consult(s): -Referred To: OPHTHALMOLOGY CONSULT (Routine) Specialty: OPHTHALMOLOGY Clinic:

The Chief Complaint is: Chest tightness.

History of present illnessThe Patient is a 26 year old male.
He reported: General overall feeling Good

No military duty-related information - (Not on PRP/SCI/PSP). No depression Screen: Negative PHQ-2 (Score < 3).
Pt is a 26 yo male with a history of allergies and childhood asthma. He notes a history of asthma in childhood which was associated with allergic symptoms. He remarks on 1 hospitalization for his asthma as a child but none since. Since the age of 8 he has been doing well and was not maintained on any inhalers. He is very active and is an active marathoner. Recently he has noted increased symptoms of chest tightness associated with exposure to cats and dogs. He was briefly treated with advair, but is currently being maintained on zyrtec and flonase as well as allergen avoidance with excellent control of his symptoms. He will have one weekly chest tightness and albuterol use, but is otherwise doing well, and recently completed a marathon. He presents for routine follow up.

Pain Severity 0 / 10.

Past medical/surgical history**Reported History:**

Past Medical History:

- 1) childhood asthma
- 2) allergies.

Medical: Reported medical history N/A.

Surgical / procedural: Surgical / procedural history 1) T&A.

Reported medications: Medication history Zyrtec t1 tab po qd
Flonase.**Personal history**

-Tob: none

-EtOH: none

Originally from California. Lived in PA and NJ. USN for 5 years. Works as a cryptologist. Deployed to Japan recently, but no other travel or occupational exposure.

Behavioral history: Never a smoker / Never Used Tobacco Products.

Alcohol: No consumption of alcohol.

Habits: Exercising regularly (Engaged in Routine / Regular Activity to Improve Your Health)

Family history

Family medical history N/A.

Review of systems**Military service:** Visit is not deployment-related Location:

Date:

Systemic symptoms: Not feeling tired or poorly, not tiring easily, and no lethargy. No fever and no chills.**Pulmonary symptoms:** No dyspnea, not coughing up sputum, no hemoptysis, and no wheezing.**Gastrointestinal symptoms:** No heartburn, no nausea, and no vomiting.**Physical findings**

Murmurs: ° No murmurs were heard.

Abdomen:

Palpation: ° Abdomen was not soft. ° No abdominal tenderness.

Skin:

° No generalized cyanosis.

A/P Written by LEWIS, CHRISTOPHER T @ 16 Feb 2011 0930 CST

1. **difficulty breathing (dyspnea):** Pt is a 26 yo male with a history of childhood asthma and allergy type symptoms. His clinical history is suggestive of mild intermittent asthma, and his symptoms are under excellent control with control of his allergies with zyrtec and flonase. He will continue on these medications and prn albuterol for now, and will be referred for baseline PFTs and methacholine challenge study to definitive rule in/out asthma. Even with a positive study, his symptoms are under excellent control on his current therapy, and if needed he can be successfully controlled with an inhaled steroid. He is highly functional, and even if a diagnosis of asthma is established this in no way should impact upon his fitness for duty. He is currently fit for duty and fit for world wide deployment. He will follow up in 3-4 weeks to review the results of his PFTs.

The Chief Complaint is: Med refill.

History of present illness

The Patient is a 25 year old male.

25yo ADM arrived to medical for a refill on advair. pt states that he has no negative reactions to the medication. pt states that he only uses advair once a day.

In the Navy and currently on active duty. Visit is not deployment-related and visit is not GWOT-related.

Current medication

Advair, albuterol

Past medical/surgical history**Reported History:**

Medical: Reported medical history: Reviewed

allergies, asthma. No previous hospitalizations that are associated with the reason for this encounter: and no previous emergency room visit that are associated with the reason for this encounter;

Surgical / procedural: Surgical / procedural history: Reviewed

Reported medications: Not taking OTC medications, no dietary supplements, and no vitamin supplements.

Reported prior tests: No prior tests were performed at non-MHS facility that relate to this encounter includes:

Personal history

Social history: Reviewed

Behavioral history: No tobacco use.

Alcohol: Not using alcohol.

Family history

Family medical history: Reviewed

Review of systems**Systemic symptoms:** No fever and no chills.**Gastrointestinal symptoms:** No nausea and no vomiting.**Psychological symptoms:** Not thinking about suicide. No homicidal thoughts.**Physical findings****Vital signs:**

Vital Signs/Measurements

Value

Blood pressure: Reviewed

• Temperature: Reviewed. • RR: Reviewed. • PR: Reviewed.

General appearance:

• Normal. • Oriented to time, place, and person. • Well developed. • Well nourished. • In no acute distress.

Neurological:

• No learning disability was noted (barriers to learning).

Therapy

• No herbal medicines.

Counseling/Education

Patient verbalized understanding and accepted instructions.

when dating and individual with cats and recently a roommate attained a dog. Pt was aggressively tx with albuterol and high dose advair for resp sx. At the time he was on antihistamines for a dermat condition. Over time he was only using one puff of advair daily for sx that occurred only when reclining for the evening. Pt denies any wheezing sx. Pt is s/p tonsilectomy (has adnoids) as a child.

alert AF NAD VSS
heent sinus nt tms wnl nares pale boggy clear drainage
OP healed tonsilectomy no edema
neck supple
skin type one red hair/blue eyes.

Described constellation and continuum of allergy, atopy, asthma. Pt seems to have very good control of sx when not around critters. To rule out severe asthma and possible medical DQ pt will be managed on oral antihistamines and intranasal steroids. If there is further difficulty breathing, pt had albuterol and should report to medical. Consider methacholine challenge and allergen testing if sx are not controlled. consider Adnoidectomy as sx are worst when reclining. Pt understands and agrees with plan. Pt will f/u as needed.

The Chief Complaint is: Possible allergic reaction.

History of present illness

The Patient is a 25 year old male.

25yo ADM arrived to medical with allergies to cats and dogs which makes it hard for the pt to breathe. If he's in the same room with these animals, the pt feels tightness in chest. and becomes short of breath. He has to remove him self and uses an OTC epinephrine inhaler. pt states that when he does have an onset it can take up to 2days for the symptoms to go away completely. He had severe childhood asthma but no symptoms for years since 11 or 12.

In the Navy and currently on active duty. Visit is not deployment-related and visit is not GWOT-related.

Itching of the eyes.

Dyspnea, paroxysmal nocturnal dyspnea, orthopnea: sleeping upright or with extra pillows, and wheezing.

Current medication

Current medications reviewed and reconciled.

fexofenadine HCL 100mg, ceraphil/aquanil.

1. ASTHMA EXTRINSIC/EXTRINSIC ASTHMA, UNSPECIFIED, MILD PERSISTENT): exposure to cats and dogs. DC Primatine Mist. Patient is already on daily Claritin per Dermatology for skin rash - 1 week so far. Is supposed to follow up with Derm after 1 month and if no improvement will get skin biopsies. He's to continue on the Claritin. Will add a long acting B agonist and Albuterol for rescue inhaler in case he has any acute exacerbations of his symptoms. I have advised him to practice avoidance - not be around cats and dogs as much as possible. he has none in his home but does visit with people that have pets. If the Claritin, avoidance and Advair are not effective will refer to Allergist.

Medication(s): -ALBUTEROL *HFA* MDI-INH 90MCG/PUFF AERP - INH 2 PF PO Q4H FOR WHEEZING #1 RF1 Qt:

Chief complaint

The Chief Complaint is: Possible allergic reaction.

History of present illness

The Patient is a 25 year old male.

25yo ADM arrived to medical with complaints of allergic reaction. pt has allergies to cats and dogs which makes it hard for the pt to breath. pt feels tightness in chest, when this happens the pt has to remove him self and use a epinephrine inhaler. pt states that when he does have an onset it can take up to 2days for the symptoms to go away. pt also mentioned that he also gets headaches.

In the Navy and currently on active duty. Visit is not deployment-related and visit is not GWOT-related.

Itching of the eyes.

Dyspnea, paroxysmal nocturnal dyspnea, orthopnea: sleeping upright or with extra pillows, and wheezing.

Current medication

Current medications reviewed and reconciled.

fexofenadine HCL 100mg, ceraphil/aquanil.

Past medical/surgical history**Reported History:**

History of present illness

The Patient is a 25 year old male. Source of patient information was patient.
Barriers to learning were identified as: None
Possible barriers include cultural; religious; emotional; motivational; physical; and cognitive.
In the Navy, currently on active duty, and paygrade E5.

Presents in follow-up. He was seen for a papular follicular-based rash that appeared to occur when exposed to sunlight, primarily on the weekends. After his last visit he stopped using his soaps and use Cetaphil for two weeks. He also switched to a nonchemical sunscreen but did not notice any improvement in his symptoms overall. He has subsequently returned to using his antibacterial soap or old spice, and has used a chemical sunscreen (baby sunscreen SPF 70) and states that this weekend he did not have a breakout at all, in spite of being in the sun 11 to two.
He states that the rash has characteristically only lasted for about two to 3 days before going away without sequelae. It is tender but not necessarily itchy. He has pictures of his breakout which occurred primarily on his neck face and upper chest.

Allergies

Allergy information in Autocite area was reviewed and verified with patient.

Referred by:

History of present illness

The Patient is a 25 year old male. Source of patient information was patient.

Barriers to learning were identified as: None. Barriers considered were social; cultural; emotional; motivational; physical; religious; cognitive and language.

In the Navy and currently on active duty. Visit is not deployment-related / deployment-related. Paygrade E5.

Presents for evaluation of her recurrent rash that has been occurring over the past two summers. He states that when he spends time in the sun and especially in the water he will develop crops of pustules across his forehead, cheeks, and somewhat on his back and chest. These are typically painful and he tends to puncture these or pick them. He did that this morning and does not have any significant acute lesions. He denies breakouts on other sun exposed areas of his skin.

He has tried many different types of sunscreens, but most recently used a baby sunscreen that one time helped prevent a breakout and the other time did not.

He does not take medications regularly, though occasionally takes Aleve.

He does relate that he had MRSA 3 times, and has been using an antibacterial soap on all of his skin since April of 2009.

Allergies

Allergy information in Autocite area was reviewed and verified with patient.

Current medication

Pt is not taking meds at this time.

Counseling/Education

Education appropriate to the patients needs was provided regarding the care/treatment/services provided. The patient voices understanding and all questions were answered.

A/P Last Updated by SMITH, ERIC P @ 20 Jul 2010 1643 CDT

1. FOLLICULITIS: Appears to developing pustules of unclear etiology. The sudden onset following sun exposure may point towards a photosensitive reaction which could be photo drug or photo toxic or photoallergic. He only takes Aleve occasionally, and this could be a potential cause of pseudo-porphyrria though he has no lesions on the back of his hands and no milia. It would be atypical for acne, even though he complains of blackheads, as the sun tends to be more immunosuppressive rather than causing acne breakouts.

He may have a reaction to sunscreen products, though states that he is broken out even when not wearing sunscreen. There does not appear to be a likely interaction between water in his skin. These lesions are not urticarial.

There may be a relationship to him starting his antibacterial soap and the onset of this rash. Discussed the importance of good skin care without damaging the surface.

Pityrosporum folliculitis is also in the differential diagnosis.

Recommended:

Stop antibacterial soap.

Start Dove or Cetaphil for washing his body.

They tried different sunscreens on his skin to see if there is a relationship between outbreaks.

Return 3 to 6 weeks for reevaluation

Medication(s): -CETAPHIL (AQUANIL)CLNSR 240ML -TOP SOAP - INSTEAD OF SOAP UD (BUT THE BEST SOAP IS NO SOAP) #2 RF6 Qt: 2 Rf: 6

Note Written by NEWTON, TYLER JEROME @ 20 Jul 2010 0916 CDT**Consult Order**

Referring Provider: GUNTER, ROGER WILLIAM

Date of Request: 14 Jun 2010

Priority: Routine

Provisional Diagnosis:

ROSACEA

Reason for Request:

1ST L/M ON VM25 yo male active duty member with 9 months of facial break outs - pustules, papules on forehead, nose and cheeks with any sun exposure. Patient has tried every sun screen he knows but every time he goes out to the beach or has any outdoor time for 4 or more hours he'll break out. Clears after about 2-4 days but comes back every time he gets sun exposure. It has some features of Rosacea but a very unusual onset and resolution. Please evaluate and treat definitively.

History of present illness

The Patient is a 25 year old male.

25yo ADM arrived to medical with complaints of allergic reaction x1year. pt stated that when he first arrived to florida he was fine for x2months. now every time he goes outside he breaks out with pustules all over his face. pt has tried using sunscreen with no success. pt denies taking any medication to treat the reaction. pt does notice more pustules when in the sun but he still gets them when its cloudy outside. No problems with alcohol or hot beverages. No history of Rosacea though he's had acne since he was a teen - that's cleared for the most part and hasn't had any problems of this kind until he got to floriday about 9 months ago. Originally from California and has spent his whole life out doors in the sun.

In the Navy and currently on active duty. Visit is not deployment-related and visit is not GWOT-related.

Current medication

Current medications reviewed and reconciled.

Subject: Medical Board - Request for Formal Board

Summary of medical symptoms how they effect my work and why I have been promotable and advanced even through the severity. This is from my perspective and on the fly my doctors may have more conclusive evidence. I have such chronic pain that the GI clinic cannot treat it while in the military. The pain is so bad that I have been granted a Maryland Medicinal Certification to relieve my chronic pain. The military says I am ok because I have advanced and served. I cannot put up with the pain for another 4 years.

IBS with Diarrhea:

- Symptoms: Pain (6-10 on the pain scale), Spasms, Urgency, Soiling of Pants
- Frequency: 2-10 episodes daily 5-30 minutes in length each
- Causes: Anxiety, Stress, Intestinal Pressure (Uniforms, Gas, Food), Physical Training, Specific Scents and Specific Foods/Derivatives.
- Other: Due to traffic; long drives to Fort Meade and Walter Reed soiling of pants has occurred. In some occurrences, soiling at work has occurred due to emergency urgency and being unable to remove my uniform in time or stuck on watch without a fast-enough relief. (At home this isn't an issue as I wear sweats and easily removable clothing). The pain has been treated in many ways but as of the last Gastroenterology appointment no military approved method has worked to treat my daily pain. I have advanced and been successful because of fear and my mental health conditions and because of being worried about life outside of the military. I may have done well so far but I am tired of forcing myself through extra pain and embarrassment from this condition which makes me suicidal on a regular basis.

Mental Health (Depression, Anxiety and Trauma):

- Symptoms: Inability to get along with coworkers and family, Seclusion, Under or Over exertion of task.
- Frequency: Daily
- Causes: Security Clearance, Military Life, Childhood Trauma which resulted in wrong career path choices and not being compatible with the military, IBS-D
- Other: These mental health conditions are what have made me successful but at the expense of my health. In attempt to over compensate and to earn peoples praise I have only led my life in a way to be praised for being successful, I.E. Promotions and working well. I do not have my own identity or normalization of relationships from friendships to even family; this has required heavy therapy to try and bring some sense of normalization to my thought patterns as well as to prevent suicidal ideation which I find would be my way out of the insurmountable overexertion that I find necessary to live and because of military life which has prevented me from moving on and healing as a person.

Respectfully,
Daniel Anderson

Adult Behavioral Health Clinic - Outpatient

Walter Reed National Military Medical Center
(WRNMMC)

8901 Wisconsin Ave., Bethesda, MD 20889-5600

19 February 2018

TO: CTN2 Anderson, Daniel Dennis (REDACTED)

THRU: Lieutenant Commander Bryan Pyle, Chief Adult Behavioral Health Clinic- Outpatient Service, WRNMMC (BP)

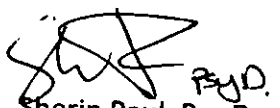

SUBJECT: Unfitting Conditions for CTN2 Daniel Anderson

1. The purpose of this memorandum is to provide the Physical Evaluation Board (PEB) with information concerning the fitness of CTN2 Daniel Anderson to continue to serve as a Cryptologic Networking Technician (CNT) from a behavioral health perspective.
2. CTN2 Anderson has received behavioral health services at the Adult Outpatient Behavioral Health Clinic at Walter Reed National Military Medical Center since 04 August 2014 and consistently on a weekly basis with this provider since 15 November 2016. CTN2 Anderson was initially treated in 2014 for a diagnosis of Anxiety Disorder Not Other Wise Specified which was then revised to a diagnosis of Generalized Anxiety Disorder (GAD) in 2015. CTN2 Anderson also has a concurrent diagnosis of Major Depressive Disorder (MDD). Additionally, per available records, CTN2 Anderson also completed a 28-day inpatient program in March 2015 for a diagnosis of Alcohol Use Disorder and has maintained follow up outpatient treatment on this issue.
3. Despite long term compliance with treatment recommendations CTN2 Anderson's GAD and MDD diagnoses cause him various symptoms that limit his ability to serve in the military, including but not limited to the following: 1) consistent anxiety or depression affecting the ability to function independently, appropriately and effectively; 2) difficulty in adapting to stressful circumstances, including work or a work-like setting; and 3) and difficulty developing healthy coping skills to manage life stressors.
4. The above limitations prevent CTN2 Anderson from performing either his basic military duties or the duties of his rating. As a CNT, CTN2 Anderson works daily in a stressful position that requires him to maintain complex Information Technology (IT) networks containing secure, classified information. CTN2 Anderson's continued service would place at risk not only his mental health but also his sensitive work product, as his symptoms will likely continue to negatively interfere with his ability to efficiently, effectively, and accurately perform his duties.
5. In my professional medical opinion, CTN2 Anderson's GAD and MDD diagnoses, individually and when taken together, leave him unable to safely and reliably perform the duties required of a Cryptologic Networking Technician.

Walter Reed
National Military
Medical Center

6. Questions regarding this memo can be directed to the undersigned at (301) 295-0500 and/or sherin.paul.ctr@mail.mil.

LATHAM & WATKINS LLP

1. The purpose of this memorandum is to file the non-concurrence of CTN2 Daniel Anderson (hereafter, "Anderson") with the findings of the Informal Physical Evaluation Board (IPEB) and to request that the IPEB find his Irritable Bowel Syndrome (IBS), Generalized Anxiety Disorder (GAD) and Major Depressive Disorder (MDD) to be unfitting conditions.

2. Pursuant to SECNAVINST 1850.4E, the military disability retirement system is based on fitness for duty. Under SECNAVINST 1850.4E §3304, a member may be determined Unfit as a result of the overall effect of two or more impairments even though each of them, standing alone, would not cause the member to be referred into the DES or be found Unfit because of physical disability. Under §3306, if a preponderance (more than 50 percent) of the evidence indicates unfitness, a finding must be made to that effect. Under SECNAVINST 1850.4E §3306, each case is considered by relating the nature and degree of physical disability of the member to the requirements and duties that member may reasonably be expected to perform in his or her office, grade, rank or rating.

3. Under Appendix 2 of DoDI 1332.18, a Service member will be considered unfit when the evidence establishes that the member, due to disability, is unable reasonably to perform duties of his or her office, grade, rank, or rating, including those during a remaining period of Reserve obligation. A Service member may also be considered unfit when the evidence establishes that: 1) the Service member's disability represents a decided medical risk to the health of the member or to the welfare or safety of other members; or 2) the Service member's disability imposes unreasonable requirements on the military to maintain or protect the Service member.

4. On October 27, 2017, the Commanding Officer of the Cyber Strike Activity Sixty Three completed a Non-Medical Assessment (NMA) in Anderson's case, confirming the following facts: 1) considering Anderson's current physical condition, he is not worldwide assignable; and 2) he does not have good potential for continued service in his present physical and mental condition. Exhibit E, at 2-3. The NMA is the Commanding Officer's unbiased and accurate comments describing how the medical condition impacts the service member's ability to function within his/her rank and MOS/rating. *Id.*, at 1.

5. On November 6, 2017, the Medical Evaluation Board (MEB) at Walter Reed National Military Medical Center released a consolidated NARSUM finding the following diagnoses to fail the medical retention standards of the Navy: MDD, GAD, and IBS with Diarrhea. Exhibit C.

6. On December 6, 2017, after the IPEB found Anderson fit for duty, medical officers proposed in the Abbreviated Medical Evaluation Board Report that Anderson should continue on limited duty for his GAD, MDD and IBS.. Exhibit B. The clinical information provided by the medical officers stated: 1) that Anderson has anxiety, depression, and co-morbid medical condition that have significantly negatively impacted his ability to function at home and in his social environment; and 2) that the GI confirmed the IBS-D/P to be of such severity that it interferes with military activities of daily living (ADLs). *Id.*

7. In light of these facts, Anderson respectfully requests the PEB find him unfit for duty based on the following conditions:

February 12, 2018
Page 3

LATHAM & WATKINS^{LLP}

I. Irritable Bowel Syndrome (IBS), Fecal Urgency and Fecal Smearing

8. Anderson requests that his IBS be found unfitting because it causes pain, spasms, fecal urgency, fecal leaking, fecal smearing, and soiling of pants. Exhibit H.

9. Anderson has reported a long history of GI symptoms dating back to childhood, but symptoms have been more frequent and disruptive over the past few years. Exhibit C. In 2016, Anderson was repeatedly diagnosed with “IBS with Diarrhea” on May 11, October 4, October 11 and November 28. Exhibit G. In 2017, Anderson continued to be diagnosed with “IBS with Diarrhea” at every one of the following doctor’s appointments: on March 16, April 13, May 17, June 1, July 12, June 27, August 7, 2017, September 19, September 29, October 17, November 2, and December 6. *Id.* Similarly, Anderson was diagnosed with “Mixed Irritable Bowel Syndrome” on June 12, 2017, and with “Irritable Bowel Syndrome” (IBS) on July 13, 2017. *Id.* Finally, Anderson was diagnosed with Fecal Urgency and Soiling on September 19, 2017, and with Fecal Urgency and Fecal Smearing on September 29, 2017. Exhibit F.

10. On June 14, 2017, Anderson was placed on Limited Duty due to his IBS being of such “severity that it daily interferes with military Activities of Daily Living (ADLs).” Exhibit A. As part of Anderson’s placement on limited duty, the military was required to allow him to be in “close proximity” to the bathroom at all times. Anderson’s Limited Duty was extended on December 6, 2017. Exhibit B.

11. On November 6, 2017, the Medical Evaluation Board determined that Anderson’s IBS failed medical retention standards due to his experiencing “generalized sharp, crampy abdominal pain about every 1-2 days that peaks prior to defecation,” which is “triggered by physical activity, anxiety, and stress.” Exhibit C. The MEB also based its decision on the fact that Anderson’s IBS precluded both his deployment to an austere environment and his return to full duty in the next 12 months.

12. Anderson’s IBS is incompatible with military service, permanently duty limiting, and thus unfitting for duty. Anderson’s IBS, which is exacerbated by “physical activity and with increased anxiety/stress,” is incompatible with general Navy life. Exhibit C. Anderson is unable to take a basic Navy physical fitness assessment, work in a deployed environment, or work in a high-stress, fast-paced unit without worsening his condition. Moreover, Anderson’s fecal urgency and soiling is incompatible with his rating of Cryptologic Networking Technician (CNT). As a CNT, working in a secured facility, Anderson has soiled his pants on more than one occasion due to fecal urgency that left him unable to get to bathroom and remove his uniform in a timely fashion. Exhibit H.

II. Generalized anxiety disorder (GAD) and Major depressive disorder (MDD)

13. Anderson requests that his GAD and MDD, individually and when taken together, be found unfitting because the symptoms prevent him from performing, safely and reliably, the duties of his rating or even his basic military duties.

February 12, 2018
Page 4

LATHAM & WATKINS LLP

14. Anderson has been in mental health treatment regularly, with weekly visits to his psychiatrist since August of 2012. Exhibit D, at 5. Anderson was hospitalized in 2015 for 30 days at Fort Belvoir for inpatient treatment. *Id.*

15. Despite being in treatment for several years and on Limited Duty for over 6 months, Anderson's MDD and GAD continue to cause significant symptoms and limitations as illustrated by his NARSUM and VA DBQ PSYCH Mental disorders Exam (Psych DBQ) dated September 25, 2017. Exhibit D. Specifically, Anderson's NARSUM notes that his MDD results in sad mood, feelings of helplessness, feelings of hopelessness, low energy, anhedonia, and chronic suicidal ideation and that his GAD manifests in worry thoughts, rumination, restlessness, sleep disturbance, and panic attacks. Exhibit C.

16. Anderson's GAD and MDD create numerous symptoms that directly limit his ability to serve in the military and to function in the larger world. For example, Anderson's Psych DBQ states that he has "near-continuous panic or depression affecting the ability to function independently, appropriately and effectively," "difficulty in adapting to stressful circumstances, including work or a worklike setting," and "obsessional rituals which interfere with routine activities." Exhibit D.

17. Anderson's limitations not only prevent him from performing his basic military duties and the duties of his rating, but also place an undue risk and burden on both himself and the military. As a CNT, Anderson works daily in a stressful job that requires him to maintain complex Information Technology (IT) networks containing secure, classified information. Therefore, should the PEB find Anderson fit and Anderson were to continue service, the Navy would be placing at risk not only his mental health, but also its own secure documentation and information systems. This is because Anderson's continued work is likely to cause difficulty adapting, panic and depression, thereby resulting in mistakes, poor judgment, and limited functioning on his part.

18. Anderson's command believes that his medical conditions render him unfit for military service and prevent his further service. His commander personally endorsed the suspension of Anderson's access to TTS/SCI materials and facilities, and states that his mental health condition "has prompted a review by Department of the Navy Central Adjudication Facility to see if the member can retain his current level of security clearance," preventing him from completing regular CNT duties. Exhibit E, at 3-4. Moreover, since Anderson's condition, according to his NARSUM, is not likely to improve in the next 12 to 36 months, it appears that he will be disqualified from obtaining the security clearance required to do his job for an indefinite period. Exhibit C.

19. Perhaps the best evidence of Anderson's lack of fitness for duty in light of his MDD and GAD is his most recent Abbreviated MEB. In sharp contrast to the IPEB's finding that Anderson is fit for duty, the most recent Abbreviated MED placed him on his second period of limited duty. Exhibit B. From a mental health perspective, Anderson's second period of limited duty is even more limiting than was his first period of limited duty. The second period requires him to remain at Walter Reed for "extensive medical care," removing him indefinitely from his work as a CNT. In addition, Anderson's second period of limited duty precludes his participation in "late

February 12, 2018
Page 5

LATHAM & WATKINS LLP

night or overnight duty,” excluding him from shift work that is common for a sailor serving as a CNT. *Id.* Moreover, Anderson’s second period of limited duty prevents him from living on a boat, deploying, and from firing and carrying a weapon. *Id.*

V. Conclusion

20. Contrary to what the PEB claimed in its IPEB response, all evidence in Anderson’s medical records illustrate that his IBS, GAD and MDD limit his continued military service. There is no indication that Anderson is limited in his duties simply because his command does not trust him. In fact, as illustrated by his commander’s NMA, his command documents that his medical conditions cause him to miss 30 hours of work per week and caused him to lose the clearance required to do his job as a CNT.

21. For the reasons set forth above and evidence enclosed herewith, Anderson respectfully requests that the PEB find his IBS, GAD, and MDD, individually and when taken together, render him unfit for continued military service.

LATHAM & WATKINS LLP

Code 16
02 04 2018

MEMORANDUM THRU Physical Evaluation Board Liaison Office, NMC Portsmouth, VA

FOR Mr. Jeffrey Riehl, Director, SECNAVCORB, 720 Kennon Street SE, Suite 309,
Washington Navy Yard, Washington DC, 20734-5106

SUBJECT: SECNAVCORB Petition for Relief for CTN2 Daniel Anderson

1. Our client, CTN2 Daniel Anderson (hereafter "Anderson"), is a Sailor undergoing evaluation in IDES. On 02 04 18, PEB President J.D. Reeser denied Anderson's request for a Formal Physical Evaluation Board (FPEB) Hearing.
2. **Request for Relief:**
 - a. Undersigned counsel for Anderson ("Counsel") submit that it was improper for the PEB President to deny Anderson's request for a Formal PEB Hearing. Counsel respectfully request that you revisit this decision.
 - b. Counsel further submit that Anderson is unfit to continue on active duty. Accordingly, Counsel respectfully request that a Formal Hearing be scheduled with personal appearance and Counsel to present this matter for consideration on the merits.
3. **Regarding the Authority to Deny a Formal Hearing:**
 - a. SECNAVINST 1850.4E, Encl. 4 § 4109 clearly dictates the role of the PEB in the Formal Hearing process:
 - i. "The President, PEB, may grant a request for a hearing before a Formal PEB or recommend to the DIRNCPB, that the request be denied. The DIRNCPB, upon review of the case may grant the request for a hearing or deny it. The decision of the Director in any case will not be subject to appeal."
 - b. SECNAV explicitly withheld from the PEB President authority to deny a Formal Hearing, specifying instead the PEB President may only "recommend" a denial. This bifurcated appeal process ensures that the member receives due process, rather than appealing to the same entity whose proposed findings are in dispute.
 - c. SECNAVCORBINST 5216.1G, as illustrated by its title ("Authority to Sign...") and sub-headings ("Signatory Authority"), merely delegates clerical authority to "sign" correspondence. It does not delegate decision-making authority.

LATHAM & WATKINS LLP

- i. The same is true of SECNAVINST M-5216.5 CORRESPONDENCE MANUAL (Jun 2015), superseding SECNAVINST 5216.50 (Aug 1996), which some cite to support the position that that an officer may sub-delegate authority delegated to him or her, unless the delegation restricts sub-delegation. This also applies only to signatory authority (see § 2- 2(5)(b)(1) and title, "Delegation of Signature Authority").
- d. Furthermore, SECNAVCORBINST 5216.1G fails to meet the specificity requirement of SECNAV M-5216.5:
 - i. Per SECNAV M-5216.5 §2-2(5)(b)(1): "For each individual that the delegation of authority applies, a letter so delegating that authority to the individual, by name, will be prepared."
 - ii. SECNAVCORBINST 5216.1G fails to specify Mr. Reeser by name, listing instead "President or Executive Secretary PED (own title)."
- e. With respect to the SECNAVCORB delegation memorandum, Counsel respectfully submit that it is improper for SECNAVCORB to re-delegate this authority.
 - i. The Secretary explicitly made his wishes clear in SECNAVINST 1850.4E, Encl. 4 § 4109. The PEB President may "recommend to the DIRNCPB, that the request [for a Formal Hearing] be denied."
 - ii. It is not logically sound that the PEB President would "recommend to [DIRSECNAVCORB] that the request be denied" if the PEB President were making the decision himself.
 - iii. Nor does it follow that the Secretary would direct the PEB President to recommend to a third party that a Formal Hearing be denied, if the Secretary intended for the PEB President have authority to deny a Formal Hearing.
 - iv. DIRSECNAVCORB's delegation counteracts the expressed intent of the Secretary. SECNAVINST § 4109 established a process which allows the PEB President to grant and reconsider his own decision, but requires *another* authority to review and ultimately deny (without further appeal) the PEB President's proposal. Because the Secretary required the CORB to review the decisions of the PEB, it is illogical that CORB, without approval from the Secretary of the Navy, would delegate power to the PEB President to uphold his own decision without an avenue for appeal.
- f. Even if DIRSECNAVCORB believed that it were appropriate to re-delegate authority originally delegated to him by SECNAV, he may not re-delegate such authority to the PEB President.

LATHAM & WATKINS LLP

- i. The Secretary was explicit in his intentions that the PEB may only "recommend" denial, and a third party must review and implement.
 - ii. Because the Secretary explicitly limited the PEB President to recommending a course of action, delegation of ultimate authority to the PEB President without appeal is contrary to SECNAVINST 1850.4E, Encl. 4 § 4109.
 - g. Finally, even if DIRSECNAV CORB believed that it were appropriate to re-delegate the authority to deny a Formal Hearing, he would remain responsible for ensuring that any such denial was proper.
 - i. US Navy Regulations § 1022 (1990), Delegations of Authority, states that:
 - 1. "The delegation of authority and the issuance of orders and instructions by a person in the naval service shall not relieve such person from any responsibility imposed upon him or her. He or she shall ensure that the delegated authority is properly exercised and that his or her orders and instructions are properly executed."
 - h. In filing this appeal, Counsel respectfully request that DIRSECNAV CORB "ensure that the delegated authority [was] properly exercised" in the denial of my Formal Hearing request.
4. Regarding the Informal (FIT/UNFIT) Findings of the PEB:
- a. For the aforementioned reasons, Counsel respectfully request that a Formal Hearing be scheduled with personal appearance and assigned Counsel to present this matter for a Formal Hearing on the merits.
 - b. POC is Michael S. Yedinak, DES Counsel, NMC Portsmouth, VA 23708, 757-953-5877, michael.s.yedinak.mil@mail.mil.

Respectfully submitted,

INFORMAL PEB FINDINGS

I. DA I accept / do not accept (initial and circle your decision) the Informal PEB's fitness determination:

- If accepting, proceed to section II.
- If contesting, proceed to section III.

SECTION II (Accept)

II. I ACCEPT the Informal PEB's finding(s). I do not request a Formal PEB hearing, waive my right to submit new and/or additional information, and (Select the Following):

- Note: Options A and B are not available for members enrolled in PLD.

A. _____ I request to remain on active duty in a Permanent Limited Duty (PLD) status until _____. I understand I am responsible for sending my PLD Request (with justification and Command endorsement) within fifteen (15) calendar days from today's counseling date, to COMNAVPERSCOM (PERS-4821) or CMC (MMSR-4) with concurrent notification to the PEB. I understand the PEB does not approve my PLD.

B. _____ (For UNFIT Navy members only) I request my separation/retirement date be on _____. Requested date must be no less than 30 days, but not more than 60 days from the day, I received notice of my PEB findings. I understand the PEB does not determine my separation/retirement date.

C. _____ Request the Department of Veterans Affairs (VA) reconsider my disability rating percentage(s).

Note: I understand that:

1. The VA will ONLY reconsider the disability rating(s) for the condition(s) the PEB determined were Unfitting.
2. The request for a VA disability rating reconsideration *must* include new medical evidence or sufficient justification of an error to warrant reconsideration.
3. I understand the PEB will finalize my case (without forwarding for a VA Reconsideration) if I fail to submit new medical evidence or sufficient justification of an error to warrant reconsideration within ten (10) calendar days from the day I received my findings.
4. Upon receipt of the VA Reconsideration, the PEB will immediately finalize my case, notify my service headquarters, and send me the VA's Reconsideration.
5. Although I am permitted only a one-time VA disability rating reconsideration while in the DES, upon my separation/retirement I may appeal my disability ratings directly to the VA per 38 CFR Part 3. Additionally, I understand I have the opportunity to be represented before the VA by a VA-accredited attorney, agent, or representative of a VA-recognized Service organization.

DA
Initials

_____ The following list contain the condition(s), together with the supporting documentation, I desire the PEB to forward to the VA for reconsideration on my disability rating percentage(s).

_____ Provided documentation: ☐ Yes: ☐ No

_____ Provided documentation: ☐ Yes: ☐ No

_____ Provided documentation: ☐ Yes: ☐ No

_____ Provided documentation: ☐ Yes: ☐ No

Please explain and/or provide statement:

Note: Attachment including medical and/or non-medical documentation justifying an error warranting reconsideration must be included together with this EOO.

DA

Initials

SECTION III (Contest)**III. I DO NOT ACCEPT and CONTEST the Informal PEB's finding(s), and:**

DA I request a Formal PEB hearing to contest only my fitness determination.
 (For a VA Reconsideration refer to paragraph II (C))

Note: I understand that:

1. The PEB will ONLY consider the fitness determination (Fit or Unfit), and will not consider the disability rating percentage(s); Rating percentage(s) will be determined by the VA. (Not applicable for TDRL)
2. Because a Formal Hearing is a "de novo" proceeding, my previous PEB findings can change.
3. I am entitled and strongly encouraged to submit a statement clearly indicating the reason(s) for contesting the Informal PEB's fitness determination. This statement should include the final PEB result I desire.
4. This formal hearing will be a full and fair hearing, and I will be appointed a government lawyer (at no charge) to represent me. I also have the right to be represented by private counsel, but at my sole expense.

Select and initial as applicable:

DA Per SECNAVINST 1850.4E §§ 3202, 3302, I request that the PEB determine the following diagnosis(es) as unfitting:

<u>MAJOR DEPRESSIVE DISORDER</u>	Provided documentation: <input checked="" type="checkbox"/> Yes: <input type="checkbox"/> No
<u>GENERALIZED ANXIETY DISORDER</u>	Provided documentation: <input checked="" type="checkbox"/> Yes: <input type="checkbox"/> No
<u>IRRITABLE BOWEL SYNDROME w/ DIARRHEA</u>	Provided documentation: <input checked="" type="checkbox"/> Yes: <input type="checkbox"/> No
_____	Provided documentation: <input type="checkbox"/> Yes: <input type="checkbox"/> No
_____	Provided documentation: <input type="checkbox"/> Yes: <input type="checkbox"/> No

Please explain and/or provide statement:

Note: Attachment including medical and/or non-medical documentation justifying an error warranting reconsideration may be included together with this EOO.

LATHAM & WATKINS LLP

MEMORANDUM

Date: February 12, 2017

From: Tae Hee (Tamara) Kim, Esq. and Eugene Elrod, Esq., of Latham & Watkins LLP, on behalf of CTN2 Daniel Anderson

To: President, Department of Navy Physical Evaluation Board (PEB)
Attention: Ms. Ton Jua Howard (TDRL)
720 Kennon Street
BLDG 36 STE 309
Washington Navy Yard, DC 20374-5023

Subj: CTN2 Daniel Anderson's Request for Informal Reconsideration

Ref: (a) SECNAVINST 1850.4E

(b) DoDI 1332.18

Encl: Abbreviated Medical Evaluation Board Report dated June 13, 2017 (Exhibit A)

Abbreviated Medical Evaluation Board Report dated December 6, 2017 (Exhibit B)

Consolidated NARSUM (Exhibit C)

Compensation and Pension Exam Report for DBQ PSYCH Mental disorders Exam dated October 26, 2017 (Exhibit D)

Non-Medical Assessment (NMA) dated October 27, 2017 (Exhibit E)

Medical Record created October 30, 2017 at WRNMMC (Exhibit F)

Personal Health Information created on January 24, 2018 from the Military Electronic Health Record (Exhibit G)

Personal Summary of Medical Symptoms by Daniel Anderson (Exhibit H)

LATHAM & WATKINS LLP

1. The purpose of this memorandum is to file the non-concurrence of CTN2 Daniel Anderson (hereafter, "Anderson") with the findings of the Informal Physical Evaluation Board (IPEB) and to request that the IPEB find his Irritable Bowel Syndrome (IBS), Generalized Anxiety Disorder (GAD) and Major Depressive Disorder (MDD) to be unfitting conditions.
2. Pursuant to SECNAVINST 1850.4E, the military disability retirement system is based on fitness for duty. Under SECNAVINST 1850.4E §3304, a member may be determined Unfit as a result of the overall effect of two or more impairments even though each of them, standing alone, would not cause the member to be referred into the DES or be found Unfit because of physical disability. Under §3306, if a preponderance (more than 50 percent) of the evidence indicates unfitness, a finding must be made to that effect. Under SECNAVINST 1850.4E §3306, each case is considered by relating the nature and degree of physical disability of the member to the requirements and duties that member may reasonably be expected to perform in his or her office, grade, rank or rating.
3. Under Appendix 2 of DoDI 1332.18, a Service member will be considered unfit when the evidence establishes that the member, due to disability, is unable reasonably to perform duties of his or her office, grade, rank, or rating, including those during a remaining period of Reserve obligation. A Service member may also be considered unfit when the evidence establishes that:
1) the Service member's disability represents a decided medical risk to the health of the member or to the welfare or safety of other members; or 2) the Service member's disability imposes unreasonable requirements on the military to maintain or protect the Service member.
4. On October 27, 2017, the Commanding Officer of the Cyber Strike Activity Sixty Three completed a Non-Medical Assessment (NMA) in Anderson's case, confirming the following facts: 1) considering Anderson's current physical condition, he is not worldwide assignable; and 2) he does not have good potential for continued service in his present physical and mental condition. Exhibit E, at 2-3. The NMA is the Commanding Officer's unbiased and accurate comments describing how the medical condition impacts the service member's ability to function within his/her rank and MOS/rating. *Id.*, at 1.
5. On November 6, 2017, the Medical Evaluation Board (MEB) at Walter Reed National Military Medical Center released a consolidated NARSUM finding the following diagnoses to fail the medical retention standards of the Navy: MDD, GAD, and IBS with Diarrhea. Exhibit C.
6. On December 6, 2017, after the IPEB found Anderson fit for duty, medical officers proposed in the Abbreviated Medical Evaluation Board Report that Anderson should continue on limited duty for his GAD, MDD and IBS.. Exhibit B. The clinical information provided by the medical officers stated: 1) that Anderson has anxiety, depression, and co-morbid medical condition that have significantly negatively impacted his ability to function at home and in his social environment; and 2) that the GI confirmed the IBS-D/P to be of such severity that it interferes with military activities of daily living (ADLs). *Id.*
7. In light of these facts, Anderson respectfully requests the PEB find him unfit for duty based on the following conditions:

I. Irritable Bowel Syndrome (IBS), Fecal Urgency and Fecal Smearing

8. Anderson requests that his IBS be found unfitting because it causes pain, spasms, fecal urgency, fecal leaking, fecal smearing, and soiling of pants. Exhibit H.

9. Anderson has reported a long history of GI symptoms dating back to childhood, but symptoms have been more frequent and disruptive over the past few years. Exhibit C. In 2016, Anderson was repeatedly diagnosed with “IBS with Diarrhea” on May 11, October 4, October 11 and November 28. Exhibit G. In 2017, Anderson continued to be diagnosed with “IBS with Diarrhea” at every one of the following doctor’s appointments: on March 16, April 13, May 17, June 1, July 12, June 27, August 7, 2017, September 19, September 29, October 17, November 2, and December 6. *Id.* Similarly, Anderson was diagnosed with “Mixed Irritable Bowel Syndrome” on June 12, 2017, and with “Irritable Bowel Syndrome” (IBS) on July 13, 2017. *Id.* Finally, Anderson was diagnosed with Fecal Urgency and Soiling on September 19, 2017, and with Fecal Urgency and Fecal Smearing on September 29, 2017. Exhibit F.

10. On June 14, 2017, Anderson was placed on Limited Duty due to his IBS being of such “severity that it daily interferes with military Activities of Daily Living (ADLs).” Exhibit A. As part of Anderson’s placement on limited duty, the military was required to allow him to be in “close proximity” to the bathroom at all times. Anderson’s Limited Duty was extended on December 6, 2017. Exhibit B.

11. On November 6, 2017, the Medical Evaluation Board determined that Anderson’s IBS failed medical retention standards due to his experiencing “generalized sharp, crampy abdominal pain about every 1-2 days that peaks prior to defecation,” which is “triggered by physical activity, anxiety, and stress.” Exhibit C. The MEB also based its decision on the fact that Anderson’s IBS precluded both his deployment to an austere environment and his return to full duty in the next 12 months.

12. Anderson’s IBS is incompatible with military service, permanently duty limiting, and thus unfitting for duty. Anderson’s IBS, which is exacerbated by “physical activity and with increased anxiety/stress,” is incompatible with general Navy life. Exhibit C. Anderson is unable to take a basic Navy physical fitness assessment, work in a deployed environment, or work in a high-stress, fast-paced unit without worsening his condition. Moreover, Anderson’s fecal urgency and soiling is incompatible with his rating of Cryptologic Networking Technician (CNT). As a CNT, working in a secured facility, Anderson has soiled his pants on more than one occasion due to fecal urgency that left him unable to get to bathroom and remove his uniform in a timely fashion. Exhibit H.

II. Generalized anxiety disorder (GAD) and Major depressive disorder (MDD)

13. Anderson requests that his GAD and MDD, individually and when taken together, be found unfitting because the symptoms prevent him from performing, safely and reliably, the duties of his rating or even his basic military duties.

LATHAM & WATKINS LLP

14. Anderson has been in mental health treatment regularly, with weekly visits to his psychiatrist since August of 2012. Exhibit D, at 5. Anderson was hospitalized in 2015 for 30 days at Fort Belvoir for inpatient treatment. *Id.*

15. Despite being in treatment for several years and on Limited Duty for over 6 months, Anderson's MDD and GAD continue to cause significant symptoms and limitations as illustrated by his NARSUM and VA DBQ PSYCH Mental disorders Exam (Psych DBQ) dated September 25, 2017. Exhibit D. Specifically, Anderson's NARSUM notes that his MDD results in sad mood, feelings of helplessness, feelings of hopelessness, low energy, anhedonia, and chronic suicidal ideation and that his GAD manifests in worry thoughts, rumination, restlessness, sleep disturbance, and panic attacks. Exhibit C.

16. Anderson's GAD and MDD create numerous symptoms that directly limit his ability to serve in the military and to function in the larger world. For example, Anderson's Psych DBQ states that he has "near-continuous panic or depression affecting the ability to function independently, appropriately and effectively," "difficulty in adapting to stressful circumstances, including work or a worklike setting," and "obsessional rituals which interfere with routine activities." Exhibit D.

17. Anderson's limitations not only prevent him from performing his basic military duties and the duties of his rating, but also place an undue risk and burden on both himself and the military. As a CNT, Anderson works daily in a stressful job that requires him to maintain complex Information Technology (IT) networks containing secure, classified information. Therefore, should the PEB find Anderson fit and Anderson were to continue service, the Navy would be placing at risk not only his mental health, but also its own secure documentation and information systems. This is because Anderson's continued work is likely to cause difficulty adapting, panic and depression, thereby resulting in mistakes, poor judgment, and limited functioning on his part.

18. Anderson's command believes that his medical conditions render him unfit for military service and prevent his further service. His commander personally endorsed the suspension of Anderson's access to TTS/SCI materials and facilities, and states that his mental health condition "has prompted a review by Department of the Navy Central Adjudication Facility to see if the member can retain his current level of security clearance," preventing him from completing regular CNT duties. Exhibit E, at 3-4. Moreover, since Anderson's condition, according to his NARSUM, is not likely to improve in the next 12 to 36 months, it appears that he will be disqualified from obtaining the security clearance required to do his job for an indefinite period. Exhibit C.

19. Perhaps the best evidence of Anderson's lack of fitness for duty in light of his MDD and GAD is his most recent Abbreviated MEB. In sharp contrast to the IPEB's finding that Anderson is fit for duty, the most recent Abbreviated MED placed him on his second period of limited duty. Exhibit B. From a mental health perspective, Anderson's second period of limited duty is even more limiting than was his first period of limited duty. The second period requires him to remain at Walter Reed for "extensive medical care," removing him indefinitely from his work as a CNT. In addition, Anderson's second period of limited duty precludes his participation in "late

LATHAM & WATKINS LLP

night or overnight duty,” excluding him from shift work that is common for a sailor serving as a CNT. *Id.* Moreover, Anderson’s second period of limited duty prevents him from living on a boat, deploying, and from firing and carrying a weapon. *Id.*

V. Conclusion

20. Contrary to what the PEB claimed in its IPEB response, all evidence in Anderson’s medical records illustrate that his IBS, GAD and MDD limit his continued military service. There is no indication that Anderson is limited in his duties simply because his command does not trust him. In fact, as illustrated by his commander’s NMA, his command documents that his medical conditions cause him to miss 30 hours of work per week and caused him to lose the clearance required to do his job as a CNT.

21. For the reasons set forth above and evidence enclosed herewith, Anderson respectfully requests that the PEB find his IBS, GAD, and MDD, individually and when taken together, render him unfit for continued military service.

REQUEST PERTAINING TO MILITARY RECORDS

Requests from veterans or deceased veteran's next-of-kin may be submitted online by using eVetRees at <http://www.archives.gov/veterans/military-service-records/>.
To ensure the best possible service, please thoroughly review the accompanying instructions before filling out this form. PLEASE PRINT LEGIBLY OR TYPE BELOW.

SECTION I - INFORMATION NEEDED TO LOCATE RECORDS (Furnish as much information as possible.)

1. NAME USED DURING SERVICE (last, first, full middle) Anderson, Daniel Dennis	2. SOCIAL SECURITY # [REDACTED]	3. DATE OF BIRTH [REDACTED] 1985	4. PLACE OF BIRTH Riverside, California
--	---	--	---

5. SERVICE, PAST AND PRESENT (For an effective records search, it is important that ALL service be shown below.)

	BRANCH OF SERVICE	DATE ENTERED	DATE RELEASED	OFFICER	ENLISTED	SERVICE NUMBER (If unknown, write "unknown")
a. ACTIVE	USN-US Navy	01NOV05		<input type="checkbox"/>	<input checked="" type="checkbox"/>	DOD# 1286180538
b. RESERVE	-			<input type="checkbox"/>	<input type="checkbox"/>	
c. STATE NATIONAL GUARD	-			<input type="checkbox"/>	<input type="checkbox"/>	

6. IS THIS PERSON DECEASED? ☒ NO ☐ YES - *MUST* provide Date of Death if veteran is deceased: _____

7. DID THIS PERSON RETIRE FROM MILITARY SERVICE? ☒ NO ☐ YES

SECTION II - INFORMATION AND/OR DOCUMENTS REQUESTED**1. CHECK THE ITEM(S) YOU ARE REQUESTING:**

☒ **DD Form 214 or equivalent.** Year(s) in which form(s) issued to veteran: _____
This form contains information normally needed to verify military service. A copy may be sent to the veteran, the deceased veteran's next-of-kin, or other persons or organizations, if authorized in Section III, below. An **UNDELETED DD214** is ordinarily required to determine eligibility for benefits. If you request a DELETED copy, the following items will be blacked out: authority for separation, reason for separation, reenlistment eligibility code, separation (SPD/SPN) code, and, for separations after June 30, 1979, character of separation and dates of time lost.
An **UNDELETED copy will be sent UNLESS YOU SPECIFY A DELETED COPY** by checking this box: ☐ I want a **DELETED** copy.

☒ **Medical Records** Includes Service Treatment Records, Health (outpatient) and Dental Records. *IF HOSPITALIZED (inpatient) the FACILITY NAME and DATE (month and year) for EACH admission MUST be provided:* _____

☒ **Other (Specify):** Please include ALL documents in my OMPF; do NOT send an extract.

2. PURPOSE: (Providing information about the purpose of the request is **strictly voluntary**; however, it may help to provide the best possible response and may result in a faster reply. Information provided will in no way be used to make a decision to deny the request.)

☒ Benefits (explain) ☐ Employment ☐ VA Loan Programs ☐ Medical ☐ Genealogy ☐ Correction ☐ Personal ☐ Other (explain)

Explain here: benefits claim assistance

SECTION III - RETURN ADDRESS AND SIGNATURE**1. REQUESTER NAME:** Anderson, Daniel Dennis

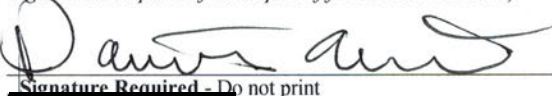

2. ☒ I am the MILITARY SERVICE MEMBER OR VETERAN identified in Section I, above. ☐ I am the VETERAN'S LEGAL GUARDIAN (*MUST submit copy of Court Appointment*) or AUTHORIZED REPRESENTATIVE (*MUST submit copy of Authorization Letter or Power of Attorney*) ☐ OTHER _____
(Relationship to deceased veteran) (Specify type of Other)

3. SEND INFORMATION/DOCUMENTS TO:
(Please print or type. See item 4 on accompanying instructions.)

National Veterans Legal Services Program

Name
1600 K Street NW, Suite 500
Street Apt.
Washington DC 20006
City State Zip Code

4. AUTHORIZATION SIGNATURE: I declare (or certify, verify, or state) under penalty of perjury under the laws of the United States of America that the information in this Section III is true and correct and that I authorize the release of the requested information. (See items 2a or 3a on accompanying instruction sheet. Without the Authorization Signature of the veteran, next-of-kin of deceased veteran, veteran's legal guardian, authorized government agent, or other authorized representative, only limited information can be released unless the request is archival. No signature is required if the request is for archival records.)

Third Officer: Third Member Vote, N/A, N/A, Third Officer

FINDINGS COMMENTS

MedicalOfer

2018-01-16 13:39:41 exf

The member has a diagnosis of OSA, IBS, anxiety, and depression based on medical documentation. Based on the evidence contained within the case file, specifically the medical notes that document adequate treatment of his OSA with CPAP and a long standing history of IBS, depression, and anxiety that in spite of, the member has successfully served in rate and promoted. His inability to work in rate at this time is due to loss of confidence by his command for violations of the UCMJ, not because of his diagnoses such that the Informal Board has determined that the member's condition does not preclude him from the reasonable performance of his duties. Therefore, the Board finds that the member is fit to continue naval service and that he is reasonably able to perform the duties of his rating.

The Department of the Navy considered the combined effect of all conditions when making its fitness determination and applied this to the final adjudication.

PresidingOfer

2018-01-17 06:31:13 sdh

The evidence establishes that the member is able to reasonably perform duties of his office, grade, rank, or rating.

Overall Ruling <small>(FIT/UNFIT/PFIT; PQ/NPQ; EPTS-SA/EPTS-NR)</small>	Combat Conditions <small>CR/NCR; CZ/NCZ</small>
MEBR: MEB WRNMC: "Discussion: The VA DBQ examiner did not establish a diagnosis related to the following claims, and there is no evidence of impact on duty in available medical records: left wrist condition, anal fissure, and anal spasms. The SM claimed mental health condition to include schizoid effect. Per an AHLTA Psychology Assessment Be note dated 08 February 2017, PO2 Anderson underwent psychological testing which yielded the impression that he had a pattern consistent with Schizoid personality traits but did not formally diagnoses the SM with a personality disorder. Personality traits do not constitute a ratable condition. The SM claimed sleep disturbance to include insomnia which is subsumed under the diagnosis of Major Depressive Disorder, Recurrent, Moderate as diagnosed by the VA and supported by the medical record. Diagnoses: 1. Major Depressive Disorder (MDD), Recurrent, Moderate (ICD10: F33.1) 2. Generalized Anxiety Disorder (GAD) (ICD 10: F41.1) 3. Irritable bowel syndrome with diarrhea (ICD10 Code: K58.0) 4. Obstructive sleep apnea (ICD10 Code: G47.33)"

DEPARTMENT OF THE NAVY
SECRETARY OF THE NAVY COUNCIL OF REVIEW BOARDS
720 KENNON STREET SE STE 309
WASHINGTON NAVY YARD DC 20374-5023

IN REPLY REFER TO

Dear TDRL Periodic Re-examiner,

A medically retired Sailor or Marine has been assigned to your clinic for a Temporary Disability Retired List (TDRL) re-evaluation exam. The Physical Evaluation Board (PEB) is required to rate the service member based on the VA Schedule for Rating Disabilities. Although the required information for rating may not be consistent with how you would typically review an interim history or conduct a physical, please be aware that the information requested in the paragraph below is required by Title 10, U. S. Code so that the PEB can adequately assess and assign a rating to the service member.

If the required information below is not received by the PEB, the service member may have to return for repeated examinations. Please recognize that this delays the process and may even lead to some members losing benefits while their service headquarters reissue Temporary Additional Duty orders. Thank you for your time and attention in helping this Sailor or Marine.

Very Respectfully,

For the Physical Evaluation
Board

Orthopedic Conditions (Codes 5000-5500)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Arthritis (Codes 5002 & 5025)

Evaluator: Rheumatology

- Discuss number of flares in the past 12 months.
- Discuss response to therapy.
- Discuss limitation of motion of individual joints.

Prosthetic Implants and Amputations (Codes 5051-5199)

Evaluator: Orthopedics

- Date of Surgery.
- Document level of amputation.
- Document fitting of prosthesis (if applicable).
- Discuss current symptoms and function.

Examination of Joints: (Codes 5200-5299)

Evaluator: Orthopedics or Sports Medicine, Physical Therapy may document ranges of motion

For rating purposes, the Veterans Administration REQUIRES that ranges of motion in all planes be repeated three times and measured with a goniometer. **All three measurements MUST be recorded in your note and the statement that they were measured with a goniometer must be included.**

- Address ankylosis (if present) and document angle of ankylosis.
- Address instability.
- If there is impairment due to direct bony defect, address defect.
- If there is a deformity, address the deformity.
- Document pain with ranges of motion and where pain begins.

Examination of Muscle Groups (Codes 5300-5399)

Evaluator: Orthopedics or Sports Medicine

- Address motor strength.
- Address atrophy and measure muscle circumference, if possible.

Organs of Special Sense (Codes 6000-6299)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Eyes

Evaluator: Ophthalmology

- Anatomic loss of either or both eyes.
- Visual acuity in both eyes.
- Visual fields assessment using 8 points (every 45 degrees).
- Incapacitating episodes – periods of time in which the patient was prescribed bed rest by a physician. Be specific with time in days or weeks over the past 12 months.

Ears

Evaluator: Otolaryngology (ENT) and Audiology

- Audiogram with frequencies 1000, 2000, 3000, 4000 Hz.
- Speech Discrimination %.
- Episodes of dizziness.

Smell

Evaluator: Otolaryngology (ENT)

- Document substances used to assess.
- Document pathologic or anatomic basis for loss.

Taste

Evaluator: Otolaryngology (ENT)

- Document substances used to assess.
- Document pathologic or anatomic basis for loss.

Infectious Diseases and Immune Disorders (Codes 6300-6360)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Chronic Fatigue Syndrome

Evaluator: Rheumatology

- What is the decrease in activity level as a percentage of pre-illness level of function?
- Do the symptoms wax and wane?
- Are the symptoms constant?

Infectious Diseases

Evaluator: Infectious Disease

- Is the disease active?
- What are the current signs/symptoms of the active disease?
- Are there any residual impacts of the disease?
- What is the current treatment?

Respiratory System (Codes 6500-6900)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Evaluator: Pulmonology

Diseases of the Lungs

- Patient needs a current Pulmonary Function Test.
- Has the patient had any incapacitating episodes in which a physician has prescribed bed rest?
- What medications is the patient actually taking?
- How often does the patient use a rescue inhaler?

Pulmonary Vascular Disease

- Does the patient have pulmonary hypertension?
- Does the patient require constant uses of anticoagulants (not aspirin)?

Cardiovascular System (Codes 7000-7199)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Evaluator: Cardiology

Diseases of the Heart

- An evaluation that characterizes the patient's workload in METs.
- If a stress test is contraindicated, a targeted level of activity questions will suffice:
 - How far can the patient walk before sitting down?
 - Can the patient carry grocery bags?
 - Can the patient mow the lawn?
 - Can the patient climb a flight of stairs (and how many)?
 - Other questions as needed.
- For arrhythmias an ECG is required.
- Cardiomyopathies must be documented with an ECHO, ECG or Chest X-ray. (one will suffice)
- ECHO – needed if diastolic dysfunction is known or suspected.
- Has the patient had episodes of heart failure?

Digestive System (Codes 7200-7400)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Evaluator: Gastroenterology

- Frequency of flares.
- Duration of flares.
- Health between flares.
- GI bleeding.
- Incontinence to stool.
- Weight and weight loss/gain.
- Endoscopy as appropriate.

Nephrology Conditions (Codes 7500-7599)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Evaluator: Nephrology

For renal dysfunction

- Is the member on dialysis?
- When did they start dialysis?
- Are they pending a transplant?
- Has the member had a transplant?
- When was the transplant done? If not on dialysis, what is their stage of CKD?
- What is their BUN?
- What is their creatinine?
- What is their blood pressure trend?
- Do they have weight loss or gain?
- Do they have lethargy, weakness, anorexia?
- Do they have edema? How often?
- Do they have proteinuria (please quantitate based on first morning urine pro/crea ratio or 24 hour urine collection, confirmed adequacy by creatinine excretion)?
- What does their urine sediment contain?

For voiding dysfunction or obstructive uropathy

- Do they have a ureterostomy or vesicostomy?
- If on a cathing regimen, how often do they cath and are they compliant?
- If they have incontinence, how often must they change the absorbent materials per day?
- If appropriate, what is their post void residual in mLs?
- If appropriate, what is their peak flow rate measured in mLs/sec?
- Do they have culture confirmed infections? How often and what organisms?
- Are they on prophylaxis and are they compliant with this treatment?
- Do they have a stricture disease that requires dilatation? How often?

For kidney stones

- How often do they get stones?
- What types of intervention are needed for treatment?
- What is their recommended therapy for stone prevention?
- Are they compliant with therapy?
- Do they have hydronephrosis? If so, have they had pyonephrosis or attacks of colic with infection?

For hydronephrosis and urinary tract infections

- Please include current imaging results to describe degree of hydronephrosis.
- Do they require drainage intervention?
- Do they have culture confirmed urinary tract infections? How often, what organisms?
- Do they require oral or intravenous antibiotic treatment?
- Do they require hospitalization? How frequently per year?

or post surgical renal or urologic conditions

- Describe what surgery was done and what residual organs or portions thereof remain.
- If there is associated functional limitation due to urologic surgery, please describe.

Gynecologic and Breast Disorders (Codes 7600-7699)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Evaluator: Gynecology

- Any surgically removed organs?
- Discuss laparoscopic findings, if performed (particularly for endometriosis).

Hemic and Lymphatic Systems (Codes 7700-7799)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Evaluator: Hematology and Oncology

Issues to discuss:

- CBC.
- Bone marrow biopsy (if done).
- Bone marrow transplant.

- For cancers:
 - Surgical interventions.
 - Radiation.
 - Chemotherapy.
 - Current staging.
 - Prognosis.

The Skin (Codes 7800-7899)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Evaluator: Dermatology

Issues to discuss:

- Area of body surface affected, as a percentage.
- Area of exposed body surface affected, as a percentage.
- Use of steroids (oral and topical).
- Other immunosuppressive medications.
- Phototherapy.
- Duration of flares (days, weeks, months).

The Endocrine System (Codes 7900-7999)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Evaluator: Endocrinology

Issues to address:

- For thyroid disorders:
 - TSH.
 - Weight.
 - Cardiac involvement (if any).
 - Symptoms of fatigue, constipation, mental dysfunction, weakness.
- For diabetics:
 - Hemoglobin A1C.
 - Insulin.
 - Hypoglycemic episodes.
 - DKA.
 - Exercise patterns and level of activities.
 - Specific restrictions that the patient absolutely CANNOT do.
 - Inpatient admissions.
 - ER visits.

Neurologic Conditions (Codes 8000-8999)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

Evaluator: Neurology

General Neurologic Conditions

- Frequency of flares.
- Residual deficits as a result of the neurologic condition.

Traumatic Brain Injury

- | | |
|---|---|
| <ul style="list-style-type: none"> • Memory, subjective and objective findings. • Judgment. • Social Interaction. • Orientation. • Motor Activity. | <ul style="list-style-type: none"> • Visual Spatial Orientation. • Subjective Symptoms. • Neurobehavioral Effects. • Communication. |
|---|---|

Migraines

Mental Health Conditions (Codes 9200-9599)

Evaluator: Mental Health (must be Psychiatrist or PhD level Psychologist)

By law, the PEB uses the Department of Veterans Affairs Schedule for Rating Disabilities (VASRD) to review and adjust, if warranted, percentages for unfitting conditions for Sailors and Marines on the Temporary Disability Retired List. To assess conditions, the VASRD has specific areas that must be addressed to obtain a proper rating. Evaluations should contain the initial history, specific interventions or treatments for the condition, and any medications for the specific condition. There should be an interval history from the time of retirement and a statement of current condition.

For rating purposes, the Veterans Administration **REQUIRES** an objective assessment of social and occupational functioning. For mental health conditions, please summarize the original incident leading to the mental health injury (if there is one), confirmed by primary source documents (i.e. PDHA, PDHRA, the initial mental health assessment), a history of mental health interventions tried to date, compliance with treatment, and a history of the medications trialed to date with a review of the prescription profile refills (please print from AHLTA or VISTA, which will include even civilian pharmacy fills if paid for by the DoD; scan into AddNote at the end of your assessment).

Since being placed on TDRL, has the service member been employed in or out of the home (this includes being self-employed or being a home-maker)? How long did they hold each job? Why did they leave or are they still employed in that field? Have they gone to school? Did they obtain a degree or technical training?

Since being placed on TDRL, has the service member dated, been engaged, gotten married, broken up or gotten divorced? Have they had any children? Do they have friends that they talk to on the phone or see in person?

What do they do in their downtime? Are they able to do activities of daily living (dress, feed themselves, maintain their personal hygiene, pay bills)?

If the answer is yes to any of the below questions, please provide concrete examples of support

- Do they have any gross impairment in thought processes or communication?
- Do they have persistent delusions or hallucinations?
- Do they have any grossly inappropriate behavior that has led to self-harm or injury to others?
- Are they disoriented to their own name, location, or time?
- Do they have obsessional rituals?
- Do they have obsessional rituals which interfere with routine activities?
- Is their speech intermittently illogical, obscure, or irrelevant?
- Do they have panic or depression affecting the ability to function independently, appropriately and effectively? How often does this occur?
- Do they have impaired impulse control?
- Are they able to understand complex commands?
- Do they have sleep impairment? Please describe.

Mental Health Conditions (cont.) (Codes 9200-9599)

- Do they have objective evidence of short term or long-term memory deficiencies? If there is concern, please refer the member for neuropsychiatric testing.
- Please describe their affect, speech, judgment, abstract thinking, motivation, mood, ability to have a conversation with you.
- Is the member competent to handle finances?
- If the member is working, do they have any special requirements (weapons handling, security of information, etc.) which could be a danger to self or public?
- What specific medications is the member prescribed?
- If the member suffers from a TBI, headaches, or has had a previously abnormal NPE how many days are lost from work or school? Please include an updated NPE within the last 12 months.

Disability Evaluation System Counsel Program IDES and LDES Fact Sheet

You have been referred into the Disability Evaluation System (DES) so that the Physical Evaluation Board (PEB) may evaluate your fitness for continued military service. The DES determines: 1) fitness for continued military service, and 2) appropriate benefits for service members who are medically separated or retired because of a compensable disability.

There are two Disability Evaluation System processes your case may proceed through: the Integrated Disability Evaluation System (IDES), and the Legacy Disability Evaluation System (LDES). Each process has its pros and its cons, however the primary decisions (fitness and stability of the condition(s) if determined to be unfit) for both IDES and LDES cases are decided by the same Physical Evaluation Board, and afford Service members the same due process rights (i.e., legal counsel, impartial review, rebuttal, formal board). You are automatically enrolled in IDES unless you waive your right to IDES and request LDES.

Integrated (IDES): Congress mandated the creation of IDES to increase transparency, eliminate redundancies and discrepancies between service disability evaluations and VA disability claims, and to decrease the time between separation and the start of VA disability benefits. IDES is the default enrollment option. You are automatically enrolled in IDES unless you waive your right to IDES and request LDES. **Certain members considered to be in initial entry training may be directed into LDES by their commanding officer on a case-by-case basis, even if they desire to remain in IDES.**

- **Pros:** The VA disability rating determination is integrated into the process, and you will receive VA Compensation and Pension (C&P) Examinations. You will be assigned a VA Medical Service Coordinator (MSC), who is a VA employee assigned to serve as your liaison throughout the VA disability evaluation and claims process. The VA will examine all of your claimed conditions before you leave active duty, even ones the Service does not consider unfitting. If the PEB finds you to be medically unfit because of any compensable condition(s), the VA will rate all your all of your conditions and the PEB must accept the ratings assigned by the VA for your unfitting condition(s). You will also have the right to request a one-time VA rating reconsideration for your unfitting condition(s) if you disagree with the ratings assigned to those conditions by the VA. If you are separated/retired due to your disability, both your DoD and VA disability ratings will have already been assigned, and receipt of your VA compensation benefits should not be delayed.

Cons: If you desire to leave active service quickly, IDES cases may take longer to process than Legacy cases.

Legacy (LDES): You may waive your right to IDES, and request to be enrolled in LDES if you do so within 10 days of your referral date. This request must be approved by your Commanding Officer.

- **Pros:** If you desire to leave active service quickly, LDES cases may take less time to process than IDES cases.
- **Cons:** Your VA disability rating and compensation benefits are not calculated in LDES, so you will not receive VA benefits or compensation automatically for all conditions if you are found Unfit. You will be advised about available VA benefits; but you will have to file your own VA claims, either within 180 days of an approved separation date or after attaining veteran status and signing your DD214. Electing LDES may delay receipt of VA compensation benefits. The only rating you receive during LDES will be a rating calculated by the PEB for the condition(s) they determine to be unfitting and you will not receive a rating for any additional conditions. The PEB rating for your unfitting condition(s) may be different from the rating the VA ultimately provides for the same condition(s). A primary reason Congress mandated IDES was because many Service members were rated 20% or less by DoD for conditions that the VA then rated 30% or higher, forcing those veterans to file appeals for correction of military records to seek medical retirement, often years after discharge. IDES was created to eliminate the discrepancy between PEB and VA rating percentages.

MEMBER'S SIGNATURE

IDES Legal Consultation and IDES Enrollment or IDES Waiver and LDES Enrollment RequestDATE: 11 Aug 17

Ref: (a) Assistant Secretary of the Navy (Manpower and Reserve Affairs) memo dated March 3, 2016.
 (b) Deputy Assistant Secretary of the Navy (Military Manpower and Personnel) memo dated May 16, 2016.
 Encl: (1) DES Counsel IDES and LDES Facts Sheet

1. I have been referred into the Disability Evaluation System (DES) so that the Physical Evaluation Board may evaluate my fitness for continued military service. The DES determines: 1) fitness for continued military service, and 2) appropriate benefits for service members who are medically separated or retired because of a compensable disability. There are two Disability Evaluation System processes: the Integrated Disability Evaluation System (IDES), and the Legacy Disability Evaluation System (LDES).

2. Pursuant to reference (a), if requested by a Service member, the Service member's Commanding Officer (CO) can authorize the Service member's request to waive IDES processing and enroll in the Legacy Disability Evaluation System (LDES). I understand that if I do not waive IDES processing and elect LDES within 10 days of referral, I will remain in IDES to receive comprehensive disability evaluation of all my claimed condition(s), to include findings of service connection and assignment of appropriate VA benefits, before I leave active service. I understand that if I do request LDES, I need to inform my Commanding Officer of my request and ensure that my PEBLO receives my request within 10 days of referral. Once administratively enrolled in either IDES or LDES, I understand that I will not be allowed to switch options if I am later dissatisfied. I have also been advised that certain members considered to be in initial entry training may be directed into LDES by their commanding officer on a case-by-case basis, even if they desire to remain in IDES.

3. Per reference (b), I have consulted with legal counsel regarding the substantive and procedural differences between the Integrated and Legacy Disability Evaluation System options. I have been provided with a copy of enclosure (1) and a DES Counsel attorney has explained it to me. I am fully satisfied with the legal consultation provided and I understand the differences in my rights and potential benefits due to the procedural and substantive differences between IDES and LDES.

4. By my initial in the appropriate box and signature below, I am indicating my desire to remain enrolled into IDES or my desire to waive IDES and be enrolled in LDES. I also understand that if I am considered to be in initial entry training status, even if I desire to remain in IDES, my Commanding Officer may, on a case-by-case basis, direct me into LDES.

I elect to remain in IDES:

☒

I waive IDES and request LDES:

☐

5. If I waived IDES and have requested LDES, my command-endorsed LDES request must be returned to my PEBLO no later than _____ (10 business days from DES referral). I understand that by entering LDES I am waiving all my rights to be processed by the DoD and VA Integrated Disability Evaluation System (IDES) and am requesting instead to have my case processed through the DoD-only Legacy Disability Evaluation System (LDES). This request must be approved by my Commanding Officer (CO); once my CO has approved my request, it is not reversible.

6. I understand that I am ultimately responsible for delivering this document to my PEBLO, but by my signature below, I authorize the DES Counsel Program Office, which assisted me in this legal consultation, to transfer this signed and completed document to my PEBLO.

STATEMENT IN SUPPORT OF CLAIM

PRIVACY ACT INFORMATION: The VA will not disclose information collected on this form to any source other than what has been authorized under the Privacy Act of 1974 or Title 38, Code of Federal Regulations 1.576 for routine uses (i.e., civil or criminal law enforcement, congressional communications, epidemiological or research studies, the collection of money owed to the United States, litigation in which the United States is a party or has an interest, the administration of VA Programs and delivery of VA benefits, verification of identity and status, and personnel administration) as identified in the VA system of records, 58VA21/22/28, Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records - VA, published in the Federal Register. Your obligation to respond is required to obtain or retain benefits. VA uses your SSN to identify your claim file. Providing your SSN will help ensure that your records are properly associated with your claim file. Giving us your SSN account information is voluntary. Refusal to provide your SSN by itself will not result in the denial of benefits. The VA will not deny an individual benefits for refusing to provide his or her SSN unless the disclosure of the SSN is required by Federal Statute of law in effect prior to January 1, 1975, and still in effect. The requested information is considered relevant and necessary to determine maximum benefits under the law. The responses you submit are considered confidential (38 U.S.C. 5701). Information submitted is subject to verification through computer matching programs with other agencies.

RESPONDENT BURDEN: We need this information to obtain evidence in support of your claim for benefits (38 U.S.C. 501(a) and (b)). Title 38, United States Code, allows us to ask for this information. We estimate that you will need an average of 15 minutes to review the instructions, find the information, and complete this form. VA cannot conduct or sponsor a collection of information unless a valid OMB control number is displayed. You are not required to respond to a collection of information if this number is not displayed. Valid OMB control numbers can be located on the OMB Internet Page at www.reginfo.gov/public/do/PRAMain. If desired, you can call 1-800-827-1000 to get information on where to send comments or suggestions about this form.

SECTION III: SERVICE PAY

20A. DID/DO YOU RECEIVE ANY TYPE OF SEPARATION/SEVERANCE/RETIRED PAY? <input type="checkbox"/> YES <input type="checkbox"/> NO (If "Yes," complete Items 20B and 20C)	20B. LIST AMOUNT (If known) \$	20C. LIST TYPE (If known)
---	--	----------------------------------

IMPORTANT: Submission of this application constitutes an election of VA compensation in lieu of military retired pay if it is determined you are entitled to both benefits. If you are entitled to receive military retired pay, your retired pay may be reduced by the amount of any VA compensation that you are awarded. VA will notify the Military Retired Pay Center of all benefit changes. Receipt of military retired pay or Voluntary Separation Incentive (VSI) and VA compensation at the same time may result in an overpayment, which may be subject to collection. However, if you *do not* want to receive VA compensation in lieu of military retired pay, you should check the box in **Item 21**. Please note that if you check the box in **Item 21**, you *will not* receive VA compensation, if granted.

☐ **21. I want military retired pay instead of VA compensation**

IMPORTANT: You may elect to keep the training pay for inactive duty training days you received from the military service department. However, to be legally entitled to keep your training pay, you must waive VA benefits for the number of days equal to the number of days for which you received training pay. In most instances, it will be to your advantage to waive your VA benefits and keep your training pay.

If you waive VA benefits to receive training pay by checking the box in **Item 22**, VA will adjust your VA award to withhold future benefits equal to the total number of inactive duty for training days waived and at the monthly rate in effect for the fiscal year period for which you received training pay. Your normal VA rate will be restored when the sufficient numbers of days' benefits have been withheld.

☐ **22. I elect to waive VA benefits for the days I accrued inactive duty training pay in order to retain my inactive duty training pay.**

VETERANS SOCIAL SECURITY NO. [REDACTED]

SECTION IV: DIRECT DEPOSIT INFORMATION

The Department of Treasury requires all Federal benefit payments be made by electronic funds transfer (EFT), also called direct deposit. Please attach a voided personal check or deposit slip or provide the information requested below in Items 23, 24 and 25 to enroll in direct deposit. If you do not have a bank account, you must receive your payment through Direct Express Debit MasterCard. To request a Direct Express Debit MasterCard you must apply at www.usdirectexpress.com or by telephone at 1-800-333-1795. If you elect not to enroll, you must contact representatives handling waiver requests for the Department of Treasury at 1-888-224-2950. They will encourage your participation in EFT and address any questions or concerns you may have.

23. ACCOUNT NUMBER (Check the appropriate box and provide the account number, or simply write "Established" if you have a direct deposit with VA)

☒ CHECKING☐ SAVINGS☐ I CERTIFY THAT I DO NOT HAVE AN ACCOUNT WITH A FINANCIAL INSTITUTION OR CERTIFIED PAYMENT AGENT

Account No.: [REDACTED]

Account No.: [REDACTED]

24. NAME OF FINANCIAL INSTITUTION (Please provide the name of the bank where you want your direct deposit)

25. ROUTING OR TRANSIT NUMBER (The first nine numbers located at the bottom left of your check)

SECTION V: CLAIM CERTIFICATION AND SIGNATURE

I certify and authorize the release of information. I certify that the statements in this document are true and complete to the best of my knowledge. I authorize any person or entity, including but not limited to any organization, service provider, employer, or government agency, to give the Department of Veterans Affairs any information about me, and I waive any privilege which makes the information confidential.

I certify I have received the notice attached to this application titled, *Notice to Veteran/Service Member of Evidence Necessary to Substantiate a Claim for Veterans Disability Compensation and Related Compensation Benefits*.

I certify I have enclosed all the information or evidence that will support my claim, to include an identification of relevant records available at a Federal facility such as a VA medical center; OR, I have no information or evidence to give VA to support my claim; OR, I have checked the box in Item 26, indicating that I do not want my claim considered for rapid processing in the Fully Developed Claim (FDC) Program because I plan to submit further evidence in support of my claim.

ALTERNATE SIGNER: By signing on behalf of the claimant, I certify that I am a court-appointed representative; OR, an attorney in fact or agent authorized to act on behalf of a claimant under a durable power of attorney; OR, a person who is responsible for the care of the claimant, to include but not limited to a spouse or other relative; OR, a manager or principal officer acting on behalf of an institution which is responsible for the care of an individual; AND, that the claimant is under the age of 18; OR, is mentally incompetent to provide substantially accurate information needed to complete the form, or to certify that the statements made on the form are true and complete; OR, is physically unable to sign this form.

I understand that I may be asked to confirm the truthfulness of the answers to the best of my knowledge under penalty of perjury. I also understand that VA may request further documentation or evidence to verify or confirm my authorization to sign or complete an application on behalf of the claimant if necessary. Examples of evidence which VA may request include: Social Security Number (SSN) or Taxpayer Identification Number (TIN); a certificate or order from a court with competent jurisdiction showing your authority to act for the claimant with a judge's signature and date/time stamp; copy of documentation showing appointment of fiduciary; durable power of attorney showing the name and signature of the claimant and your authority as attorney in fact or agent; health care power of attorney, affidavit or notarized statement from an institution or person responsible for the care of the claimant indicating the capacity or responsibility of care provided; or any other documentation showing such authorization.

26. The FDC Program is designed to rapidly process compensation or pension claims received with the evidence necessary to decide the claim. VA will automatically consider a claim submitted on this form for rapid processing under the FDC Program. Check the box below **ONLY** if you **DO NOT** want your claim considered for rapid processing under the FDC Program because you plan on submitting further evidence in support of your claim.

☒ I DO NOT want my claim considered for rapid processing under the FDC Program because I plan to submit further evidence in support of my claim.

29A. SIGNATURE OF WITNESS (If veteran signed above using an "X")

29B. PRINTED NAME AND ADDRESS OF WITNESS

SECTION VII: POWER OF ATTORNEY (POA) SIGNATURE

I certify that the claimant has authorized the undersigned representative to file this supplemental claim on behalf of the claimant and that the claimant is aware and accepts the information provided in this document. I certify that the claimant has authorized the undersigned representative to state that the claimant certifies the truth and completion of the information contained in this document to the best of claimant's knowledge.

NOTE: A POA's signature *will not* be accepted unless at the time of submission of this claim a valid VA Form 21-22, *Appointment of Veterans Service Organization as Claimant's Representative*, or VA Form 21-22a, *Appointment of Individual As Claimant's Representative*, indicating the appropriate POA is of record with VA.

30A. POA/AUTHORIZED REPRESENTATIVE SIGNATURE

30B. DATE SIGNED

PRIVACY ACT NOTICE: The form will be used to determine allowance to compensation benefits (38 U.S.C. 5101). The responses you submit are considered confidential (38 U.S.C. 5701). VA may disclose the information that you provide, including Social Security numbers, outside VA if the disclosure is authorized under the Privacy Act, including the routine uses identified in the VA system of records, 58VA21/22/28, Compensation, Pension, Education, and Vocational Rehabilitation and Employment Records - VA, published in the Federal Register. The requested information is considered relevant and necessary to determine maximum benefits under the law. Information submitted is subject to verification through computer matching programs with other agencies. VA may make a "routine use" disclosure for: civil or criminal law enforcement, congressional communications, epidemiological or research studies, the collection of money owed to the United States, litigation in which the United States is a party or has an interest, the administration of VA programs and delivery of VA benefits, verification of identity and status, and personnel administration. Your obligation to respond is required in order to obtain or retain benefits. Information that you furnish may be utilized in computer matching programs with other Federal or State agencies for the purpose of determining your eligibility to receive VA benefits, as well as to collect any amount owed to the United States by virtue of your participation in any benefit program administered by the Department of Veterans Affairs. Social Security information: You are required to provide the Social Security number requested under 38 U.S.C. 5101(c)(1). VA may disclose Social Security numbers as authorized under the Privacy Act, and, specifically may disclose them for purposes stated above.

RESPONDENT BURDEN: We need this information to determine your eligibility for compensation. Title 38, United States Code, allows us to ask for this information. We estimate that you will need an average of 25 minutes to review the instructions, find the information, and complete this form. VA cannot conduct or sponsor a collection of information unless a valid OMB control number is displayed. You are not required to respond to a collection of information if this number is not displayed. Valid OMB control numbers can be located on the OMB Internet Page at www.reginfo.gov/public/do/PRAMain. If desired, you can call 1-800-827-1000 to get information on where to send comments or suggestions about this form.

NAME: ANDERSON, DANIEL DENNIS
SSN/DOB: [REDACTED] 1985
STATUS: PO2/USN
DATE: 06 November 2017

Identification: PO2 Anderson is a 32 y/o USN with 12 years length of service. MOS is CTN. He was referred to the IDES on 21 August 2017 for Irritable bowel syndrome, Generalized anxiety disorder and Major depressive disorder recurrent moderate.

History of Present Illness: Per review of medical records available in AHLTA, ESSENTRIS, and JLV, the following diagnoses are referred to the Navy Central Physical Evaluation Board as duty limiting:

Diagnoses 1-3

1. **Diagnosis 1: Major Depressive Disorder (MDD), Recurrent, Moderate (ICD10: F33.1)**
Diagnosis 2: Generalized Anxiety Disorder (GAD) (ICD 10: F41.1)
Diagnosis 3: Alcohol Use Disorder, Moderate, in early remission (not ratable)

2. **Diagnostic Reasoning:** Per the VA DBQ PSYCH Mental disorders Exam dated 25 September 2017, PO2 Anderson had a history of childhood trauma, had attempted suicide at age 17 which he did not disclose at the time by taking a bottle of aspirin (detail AHLTA Psychiatry Be note dated 04 August 2014), but no history of behavioral health diagnosis or treatment prior to entry into military service in 2005. Per an AHLTA Integrative Health & Wellness Be note dated 16 June 2014, he had anxious mood, irritable bowel, attentional difficulties, nail biting, irritability and insomnia since around age 14. He noted anxiety had also been a problem when he was stationed on a ship in Japan from 2006 to 2009, where he had little down time, worked 12 hour shifts and tried to be the "perfect" worker and he began picking out circular patches of hair in his scalp. In 2014, he was selected for a new job with increased responsibility including leadership and management duties while he noted that he would prefer to do computer work in isolation. He reported at that time that he drank up to 3 drinks, one to two times per week, and would binge, 6 or more drinks once per month or less frequently, but had tried to cut down (AHLTA Psychiatry Be note dated 16 October 2014). He had concerns about his inability to resist daily drinking to manage his, insomnia, anxious ruminations and obsessions despite his growing lack of motivation, worsening mood, and (AHLTA Substance Abuse NY notes dated 17 and 19 March 2015). He had persistent dysphoric mood, intermittent suicidal ideation, irritability, apathy and continued anxiety (AHLAT PSYCHIATRY BE note dated 23 April 2015). He had some benefit to his mood from medication and noted he was more focused and productive but still had anxiety (AHLTA Psychiatry Be note dated 14 May 2015). However, his medication caused excessive sleepiness when the dose was increased and he asked to be tapered off. During times of increased stress, he had anxiety including physical tension, increased heart rate and nausea, and mood swings with suicidal ideation and on one occasion thought about jumping off of a roof related to juggling multiple work responsibilities (AHLTA Psychiatry Be note dated 06 September 2016). In addition, guilt about how he functioned in interpersonal relationships led him to feel suicidal. Though he drank less during active alcohol dependence treatment, he resumed regular drinking of 3to 4 drinks three to four times per week with binge drinking when he was not working (AHLTA Psychiatry Be note dated 04 January 2017). He stopped taking medication after a change in medication left him feeling flat, but later resumed. However, he noted that his anxiety overwhelmed him and was negatively impacting his ability to be a Sailor (AHLTA Psychiatry Be T-Con note dated 08 June 2017). He had a Command directed safety evaluation after voicing suicidal thoughts and researching methods of suicide on-line, in response to the aftermath of a harassment allegation against him (AHLTA Psychiatry Consult Liaison Be note dated 06 July 2017) which resulted in a loss of rank. When his personal and career circumstances were discussed without his knowledge in front of 150 Service members in an all hands meeting, furthering his

estrangement from Command, he noted increased anxiety and depression with suicidal thoughts of jumping off of a roof (AHLTA Psychiatry Be note dated 06 September 2017). At his most recent follow up, he noted no significant improvement in dysphoric mood, no drinking, and he had continued medication side effects (AHLTA Psychiatry Be note dated 01 November 2017).

3. Treatment History: PO2 Anderson was evaluated for anxiety at Walter Reed National Military Medical Center (WRNMMC) and participated in therapy June to October 2014 but discontinued due to limited impact of visits (AHLTA Substance Abuse at NY note dated 19 March 2015). He self-referred to Substance Abuse Recovery Program Washington Navy Yard in March 2015 for problematic drinking and participated in Level 1 and Continuing Care group therapy until February 2016. He was referred to the Ft. Belvoir Community Residential Treatment Center from 25 March 2015 to 23 April 2015. He was referred to medication management at WRNMMC and Cognitive Behavioral Group therapy for insomnia beginning in 2015. He began Addiction Treatment Services (ATS) at WRNMMC in July 2017 and continued with outpatient individual and group therapy through ATS. He attended the WRNMMC Intensive Outpatient Program from 31 August 2017 to 22 September 2017. He had Transcranial Magnetic Stimulation seven sessions as of 10 October 2017. He continued in behavioral health treatment modalities of individual and occupational therapy and medication management. Medication trials included Escitalopram, Sertraline, and Venlafaxine ER for mood, Melatonin and Ramelteon for insomnia, and Naltrexone for alcohol dependence. Most recent medication included Duloxetine 60mg daily for mood and Eszopiclone 2 mg nightly for insomnia.

4. Symptomatology and Objective Findings: Per the VA DBQ PSYCH Mental disorders Exam dated 25 September 2017, PO2 Anderson had the following symptoms consistent with MDD which included sad mood, feelings of helplessness, feelings of hopelessness, low energy, anhedonia, and chronic suicidal ideation. He had symptoms consistent with GAD which included worry thoughts, rumination, restlessness, sleep disturbance, and panic attacks. His symptoms of Alcohol Use Disorder included a maladaptive pattern of alcohol use, excessive use and tolerance, and of interpersonal or occupational problems occurring as a result of use. His most recent mental status was notable for dysphoric mood, full affect, circumstantial thought processes and no suicidal ideation intent or plan (AHLTA Psychiatry Be note dated 01 November 2017).

5. Limitations and Prognosis: The NMA dated 27 October 2017 stated, "The conditions listed in his LIMDU paperwork and the extensive range of medical appointments CTN2 Anderson's medical practitioners have recommended/assigned for his treatment prevent him from conducting his assigned mission for his MOS/Rate."

PO2 Anderson requires ongoing behavioral health treatment at a fixed MTF. He cannot deploy nor carry and fire a weapon from a behavioral health perspective. The prognosis is guarded. It is not likely that the SM will significantly improve sufficiently to be returned to fully duty in the next 12 to 36 months. The above condition is likely to remain stable over the next 12 months.

6. VA DBQ Findings: C&P exams have been reviewed.

Diagnoses 4

1. Diagnosis: Irritable bowel syndrome with diarrhea (ICD10 Code: K58.0)

2. Diagnostic Reasoning: 32 y/o AD male was diagnosed with IBS manifested by chronic intermittent abdominal pain in 2012. He has reported a long history of GI symptoms dating back to childhood, but symptoms have been more disruptive over the past few years. In 2012 he underwent a CT abdomen/pelvis, which showed focal wall-thickening at the hepatic flexure with proximal stool retention. Colonoscopy in 2012 showed mild congestion in the sigmoid, but biopsies were unremarkable. A subsequent MRE was normal. In Sept 2017 anorectal manometry was normal. He has had frequent follow up with GI since 2016. Symptoms include generalized sharp, crampy abdominal pain about every 1-2 days that peaks prior to defecation and is relieved after bowel movements. He typically has 1-2 soft or liquid stools per day, infrequently with urgency. Abdominal pain is worse with intake of insoluble fibers; however, insoluble

PO2 Anderson, Daniel D.

06 November 2017

Page 2

AR 1291

fibers resolve his liquid stools. Abdominal pain is also worse during physical activity and with increased anxiety/stress. Low FODMAP diet has provided partial relief in frequency of pain and fecal urgency. GI evaluation dated 19Sept17 noted "IBS-D predominant symptoms complicated fecal urgency/soiling, with some element of FODMAP associated osmotic diarrhea. Comprehensive evaluation has otherwise been unremarkable."

3. **Treatment History:** dietary modification as noted, including low FODMAP and low fructose, peppermint oil 200mg daily for his abdominal cramping, Citrucel, Effexor
4. **Symptomatology and Objective Findings:** Stools have become more formed over the past few months since starting Effexor and continuing a low FODMAP diet. However, he has ongoing abdominal cramps, which continue to be triggered by physical activity, anxiety, and stress.
5. **Limitations and Prognosis:** Limited in ability to deploy to austere environment. NMA unavailable at this time.
Continued treatment is unlikely to return Soldier to full duty in 12 months. Condition is stable over 12-36 months. Will require ongoing GI and PCM follow-up and support.
6. **VA DBQ Findings:** Reviewed and concur.

Diagnoses 5

1. **Diagnosis: Obstructive sleep apnea (ICD10 Code: G47.33)**
2. **Diagnostic Reasoning:** Polysomnogram was performed on 04Oct17 at WRNMMC. SM was diagnosed with mild obstructive sleep apnea with AHI of 6/hr. CPAP was recommended.
3. **Treatment History:** CPAP
4. **Symptomatology and Objective Findings:** Apnea hypopnea index (AHI) of 7/hr.
5. **Limitations and Prognosis:** Limited in ability to deploy to austere environment due to need for electricity and fresh water. SM should not engage in any hazardous activities (such as driving) if excessively sleepy. While this condition does not limit his ability to perform his MOS, continued treatment is unlikely to return Soldier to full duty in 12 months. Condition is stable over 12-36 months. SM requires treatment with CPAP.
6. **VA DBQ Findings:** Reviewed and concur.

Conditions evaluated at the VA DBQ Exam that are not duty limiting, alone or in combination with the SM's other conditions:

3. **Subjective tinnitus**, with normal hearing bilaterally.
4. **Disturbance in sensation, cranial nerve V2**, residual OIF orthognathic surgery, improving and not duty limiting.
5. **Epidermal cysts of the scrotum**, s/p excision.
6. **Left neck folliculitis**, inactive, no residual scar per VA DBQ examiner.
7. **Scarring alopecia**, not duty limiting.
8. **Dry eye syndrome**, not duty limiting.
9. **Left ankle sprain**, resolved with no residual per VA DBQ examiner.
10. **Paronychia left hallux**, not duty limiting.
11. **Right wrist tendinitis**, VA diagnosis, with normal Rom on exam, not duty limiting.
12. **Right hand 5th proximal phalanx fracture 2008**, well healed without residual per VA DBQ examiner, no pathology found.
13. **Hemorrhoids**, not duty limiting.

PO2 Anderson, Daniel D.

06 November 2017

Page 3

AR 1292

14. **GERD**, managed with PPI.
15. **Migraine headaches**, onset 2008, treated with Alleve or Excedrin.
16. **Allergic rhinitis**, not duty limiting.
17. **Asthma**, not listed as a diagnosis by the VA DBQ examiner, diagnosis confirmed in the medical record. Pulmonary function tests were performed on 17Mar11 and revealed normal spirometry, very mild decrease in TLC, and a normal DLCO. Following the administration of methacholine there was a significant decrease in FEV1 consistent with a positive methacholine challenge. Pulmonary noted "symptom complex and positive high dose methacholine challenge test consistent with mild intermittent asthma. His symptoms are confined to allergen exposure, particularly to cats. Given the mild intermittent nature of his disease, he does not require a controller medicine, and will be treated with prn albuterol alone. He was counseled on allergen avoidance. No further workup is required. He is FIT FOR FULL DUTY WITHOUT RESTRICTIONS, and FIT FOR WORLD WIDE DEPLOYMENT WITHOUT RESTRICTIONS." Albuterol was last refilled 18May17.

Competency Statement: SM is deemed mentally competent for pay purposes and is capable of cooperating in and understanding the nature of PEB proceedings.

Past Medical History, Social History, Family History and Review of Systems:

Discussed above, otherwise not pertinent.

Discussion: The VA DBQ examiner did not establish a diagnosis related to the following claims, and there is no evidence of impact on duty in available medical records: left wrist condition, anal fissure, and anal spasms. The SM claimed mental health condition to include schizoid effect. Per an AHLTA Psychology Assessment Be note dated 08 February 2017, PO2 Anderson underwent psychological testing which yielded the impression that he had a pattern consistent with Schizoid personality traits but did not formally diagnoses the SM with a personality disorder. Personality traits do not constitute a ratable condition. The SM claimed sleep disturbance to include insomnia which is subsumed under the diagnosis of Major Depressive Disorder, Recurrent, Moderate as diagnosed by the VA and supported by the medical record.

Diagnoses:

1. **Major Depressive Disorder (MDD), Recurrent, Moderate (ICD10: F33.1)**
2. **Generalized Anxiety Disorder (GAD) (ICD 10: F41.1)**
3. **Irritable bowel syndrome with diarrhea (ICD10 Code: K58.0)**
4. **Obstructive sleep apnea (ICD10 Code: G47.33)**

Recommendations:

The Medical Board recommends that case be referred to the Central Physical Evaluation Board for the above diagnoses. Conditions did not exist prior to entry into the service. This Service Member has received maximum benefit of military medical treatment.

MEDICAL BOARD STATEMENT OF PATIENT
NAV MED 6100/2 (AUTOMATED VERSION) (1-91)

WRNMMC BETHESDA, MD

STATEMENT OF PATIENT
CONCERNING THE FINDINGS OF A MEDICAL BOARD

I have been informed that it is the recommendation of the Medical Board of National Naval Medical Center Bethesda, MD (00168) that: my case be referred to the Director, Secretary of the Navy Council of Review Boards.

LIMITATIONS ARE:

Having been informed of the contents, opinion(s) and recommendation(s) of the Medical Board I DO/DO NOT desire to submit a statement in rebuttal. I understand that this Medical Board report with my rebuttal, if any, will become part of my official military records. I further understand that the opinion(s) expressed by the Medical Board are not binding upon the military, and that my case may be subjected to review and final disposition by higher authority.

Signed:

Daniel Anderson

DEPARTMENT OF THE NAVY
CYBER STRIKE ACTIVITY SIXTY THREE
FORT GEORGE G MEADE MARYLAND 20755-6585

1850
Ser N00/017
27 Oct 17

From: Commanding Officer, Cyber Strike Activity SIXTY THREE
To: President, Physical Evaluation Board

Subj: NON-MEDICAL ASSESSMENT (NMA) IN THE CASE OF CTN2 ANDERSON,
DANIEL, XXX-XX- [REDACTED] USN/ACTIVE DUTY

Ref: (a) SECNAVINST 1850.4E, "Department of the Navy (DON) Disability Evaluation Manual," April 30, 2002

1. PURPOSE: The Non-Medical Assessment (NMA) is vital to the timely, fair, and transparent determination of whether a Marine or Sailor is Fit (or Unfit) for continued Naval service. The NMA is not a Fitness Report highlighting military character, but is the Commanding Officer's unbiased and accurate comments describing how the medical condition impacts the service member's ability to function within his/her rank and MOS/rating.

a. Part I, the "Questionnaire," collects required facts regarding the service member.

b. Part II, the "Commanding Officer's Comments," is where the PEB relies on the Commanding Officer's comments to explain how the member performs the duties of his/her MOS/Rate with their underlying medical condition(s). The NMA must be signed by the Commanding Officer or acting by direction.

2. PART I - QUESTIONNAIRE: The following assessment to assist the PEB in their determination of Fitness/Unfitness in the case of SNM: PO2 ANDERSON, DANIEL, XXX-XX- [REDACTED] USN/ACTIVE DUTY.

a. Service member's MOS/Primary Specialty; Rate/NEC: CTN/0000.

b. Member's current position or assignment: Non-working patient.

c. Is the member currently working outside of his/her specialty because of the medical condition? (Yes ☒ No ☐). If the member is working outside of his/her specialty, could the member perform in his/her rating? (Yes ☐ No ☒).

d. When did the member last pass a "full" PRT/PFT/CFT: March / 2017.

e. Did the member take the most recent PRT/PFT/CFT? (Yes ☐ No ☒ Partial ☐).

- If "No," why didn't the member take the PRT/PFT/CFT? Member's LIMITED DUTY paperwork is being considered for a waiver from PRT.

- If "Partial PRT/PFT/CFT," what events were waived and why? Pending CWG-6 medical waiver review.

f. Member's height and weight: 72in 189lbs. If not within weight standards, what is the member's body fat percentage? N/A.

g. Is the member within weight and body fat standards? (Yes ☒ No ☐). If "No," is the member on an official weight control program? (Yes ☐ No ☐ NA ☒.

h. To your knowledge, is the member fully attending all appointments and complying with all recommended treatments? (Yes ☒ No ☐.

- Has the member complied in the past? (Yes ☒ No ☐.
- If non-compliant, did the appropriate authority advise the member in writing of the medically proper course of treatment, therapy, medication, or restriction? (Yes ☐ No ☐.
- If the member is non-compliant, please explain why. N/A

i. What is the average number of work hours per week that the member's condition required the member to be away from his/her current duties for treatment, evaluation, and/or recuperation? 30 hours.

j. Is the member being processed for separation due to misconduct at a court-martial or administrative separation board proceeding? (Yes ☐ No ☒). [If "Yes," do not submit the case to the PEB until all misconduct proceedings are complete per ref (a) 3203(f)(6) because separation due to misconduct supersedes disability processing. If "No" proceed to paragraph k.]

- If "Yes" to the above, please identify the type of proceeding: ☐ Administrative Separation Board; ☐ Board of Inquiry; ☐ Summary Court-Martial; ☐ Special Court-Martial; or ☐ General Court-Martial and state the expected completion date: _____).
- Has the Commanding Officer notified PERS/MMSR-4 this member is being processed for separation due to misconduct? (Yes ☐ No ☐ NA ☒.
- Does PERS/MMSR-4 request disability processing for this member concurrent to the misconduct proceedings? (Yes ☐ No ☐ NA ☒). (Concurrent Processing requires submission to the ASN (M&RA) for ultimate disposition in accordance with ref (a) 3403(c))

k. What is the member's current length of service and date of entry into active/reserve

- LOS: 11 years / 11 months; ADSD/AFADBD: November / 2005.
- EAOS/EAS: October / 2021.
- Active Duty Years: 11 years / 11 months.
- Reserve Satisfactory Years: N/A.
- Reserve Retirement Eligible (Yes ☐ No ☒.
- Approved Retirement Date (if applicable): N/A.

l. Considering the member's current physical condition, is he/she worldwide assignable? (Yes ☐ No ☒.

m. Does the member have good potential for continued service in his/her present physical and mental condition? (Yes ☐ No ☒). If "No," please explain why not.

Member's medical condition has prompted a review by Department of the Navy Central Adjudication Facility to see if the member can retain his currently level of security clearance, which prevents him from performing the regular duties as a Cryptologic Technician Networks (CTN). Also, the member's current schedule of appointments and required treatment does not allow enough time in the normal course of a week to execute the requirements of his assigned duties.

n. Does the member desire to continue his/her military service; the PEB will not judge the member's request to separate (or remain) as a negative reflection of his/her dedication to serve in the naval service? (Yes ☐ No ☒). (Please personally obtain the member's express desire). The member desires to discontinue his military service.

o. Regarding Permanent Limited Duty (PLD) of active duty members, would you recommend that Naval Personnel Command/Headquarters Marine Corps (MMSR-4) authorize the member's retention on active duty in a Permanent Limited Duty (PLD) status, if found Unfit? (Yes ☐ No ☒.

- Has the member ever served in a PLD status? (Yes ☐ No ☒.
- Do you recommend PLD unconditionally? (Yes ☐ No ☒); or
- Do you recommend PLD only to complete retirement eligibility? (Yes ☐ No ☒ NA ☐); or
- Do you recommend PLD only to complete EAS? (Yes ☐ No ☒ NA ☐.
- If "No" to any of the PLD recommendations above, please explain why.

p. Has the member ever forward deployed in support of Operation Enduring Freedom, Operation Iraqi Freedom, or other Combat Operations? (Yes ☐ No ☒.

q. For Combat Zone determination purposes, did the member's injury occur in a combat-zone tax exclusion area as defined in DoD Financial Management Regulation, Vol. 7A, Chapter 44, Section 440103(a) [Available at <http://www.defenselink.mil/comptroller/fmr/>]? (Yes ☐ No ☒.

- If "Yes," please state where and how the injury or illness occurred. Additionally, please state what document(s) identify the geographic location of the member's injury.

r. For Combat-Related determination purposes, did the cause of the member's injury occur:

- (i) as a direct result of armed conflict, (Yes ☐ No ☒.
- (ii) while engaged in extra hazardous service, (Yes ☐ No ☒.
- (iii) under conditions simulating war; (Yes ☐ No ☒.
- (iv) by an instrumentality of war. (Yes ☐ No ☒.

- If "Yes," to any of the above, please state where and how the injury or illness occurred. Additionally, please state what document(s) identify the cause of the member's injury. N/A

s. Please provide the member's Defense Travel Service (DTS) Agency Program Coordinator's (APC) name Jim Potter; phone: 667-812-2258; and email jepotte@nsa.gov.

3. PART II – COMMANDING OFFICER'S COMMENTS: The NMA is a critical element of the Physical Evaluation Board's (PEB) adjudication. The PEB relies on your comments to explain how your Marine/Sailor's medical condition impacts his/her ability to perform the duties of his/her MOS/Rate, and the resulting impact on the command. Please note, the NMA is not an evaluation for promotion, and remains in the member's medical record. To ensure a comprehensive NMA, you must comment on all of the member's referred medical conditions and you are encouraged to comment on any of the member's VA claimed conditions. Please use additional pages as necessary.

a. The Commanding Officer submits the following comments so the PEB can make determination of Fitness/Unfitness for this member: PO2 ANDERSON, DANIEL, XXX-XX-
[REDACTED] USN/ACTIVE DUTY.

b. How does the medical condition(s) impact the member's work capacity in relation to his/her MOS/RATE? (MOS/RATE requirements can be found in MCO 1200.17A (4 Jun 09) for Marines; Volume 1 of NAVPERS 18068F October 2010 for Sailors).

Upon receipt of CTN2 Anderson's LIMDU paperwork and July 2017 NJP, assigned Special Security Officer (SSO) recommended and I endorsed service member's TS/SCI classified access and classified facility access badge be suspended, Security Access Eligibility Report (SAER) released, and process initiated for DoD Clearance Adjudication Facility (CAF) to determine if he should maintain a clearance. Final outcome of this decision is pending. The conditions listed in his LIMDU paperwork and the extensive range of medical appointments CTN2 Anderson's medical practitioners have recommended/assigned for his treatment prevent him from conducting his assigned mission for his MOS/RATE. Specifically, not having classified material/facility access prevents him from conducting his assign mission. Should his clearance be revoked, he would likely be required to cross-rate.

c. Include an explanation on what Mission Essential Tasks the member substantively can or cannot do regarding the primary duties of his/her MOS/Rate.

Without TS/SCI classified access and with his classified facility access badge suspended, Security Access Eligibility Report (SAER) released, and DoD Clearance Adjudication Facility (CAF) assessment for clearance eligibility pending, CTN2 Anderson is currently limited in his ability to complete primary duties assigned of his MOS/Rate and is unable to complete Mission Essential Tasks associated with his MOS/Rate. He is however, contributing approximately 10 hours weekly in a general mission capacity that is not specific to his MOS/Rate outside of classified facilities at this time.

d. Submit Performance Evaluations/Fitness Reports (or Proficiency & Conduct Marks) for the two years immediately prior to the date the MEB was initiated.

14NOV16-15NOV15-Promotable, 15NOV16-16SEP01-Early Promote, 16SEP02-16NOV15-Non-observed, 16NOV16-17JUL20-Significant Problems.

e. Submit any pertinent information in reference to line of duty determinations and investigations that affect the member's unfitting condition(s).

Upon receipt of CTN2 Anderson's LIMDU paperwork and July 2017 NJP, assigned Special Security Officer (SSO) recommended and I endorsed service member's TS/SCI classified access and classified facility access badge be suspended, Security Access Eligibility Report (SAER) released, and process initiated for DoD Clearance Adjudication Facility (CAF) to determine if he should maintain a clearance. Final outcome of this decision is pending.

4. CONTACT INFO. For follow-on questions concerning this NMA, the POC at this command is Herbert M. Lamb, CTNCM, Command Senior Enlisted Leader, Cyber Strike Activity SIXTY THREE; (Commercial) 443-479-6065; hmlamb@cybercom.mil (email).

D. B. YUSKO

ABBREVIATED MEDICAL EVALUATION BOARD REPORT

SECTION 1: CLINICAL INFORMATION (TO BE COMPLETED BY MEDICAL OFFICERS)

Date: 7/13/17 Patient Name: Daniel Dennis Merwin

Patient SSN: [REDACTED]

Proposed start date for limited duty: 7/13/17

Proposed end date (≤ 6 months): 12/13/2017

This period of limited duty is for: (Select one)

- ☒ 1st LIMDU (≤ 6 months) Enlisted ADSM (no referral to service headquarters necessary).
- ☐ 2nd LIMDU (≤ 6 months) Enlisted ADSM (no referral to service headquarters necessary). Note that the first and second TLD periods cannot exceed 12 months cumulatively from the date of the first TLD period.
- ☐ 1st LIMDU (≤ 6 months) Officer ADSM (referral to service headquarters necessary).
- ☐ 2nd LIMDU (≤ 6 months) Officer ADSM (referral to service headquarters necessary).
- ☐ 3rd or subsequent LIMDU periods on Navy and Marine ADSM involving a distinctly different condition than that responsible for the first and second TLD periods (for referral to service headquarters for "departmental review").
- ☒ Placement on LIMDU - if the patient is not already in a LIMDU status - at the same time the patient's case is referred to the physical evaluation board for adjudication.

Diagnosis: (1) IBS - D/P

ICD-9 CM Code K58.0

(2) GAD

ICD-9 CM Code 296.32

(3) MOD recurrent mod

ICD-9 CM Code

Circumstances of injury/illness:

The pt is a 32 y.o male who has anxiety, depression and comorbid medical conditions that have significantly negatively impacted his ability to function at home work & in his social environment.

Treatment plan:

The GI confirmed IBS-D is of such severity that it daily interferes with military ADUs.

Pt returned to IOP (mental health R+) he is on multiple bowel

Limitations from full duty (including whether transfer/TEMU for treatment is indicated, and any PRT limitations):

1) Access to all med appointments / no PT
2) ensure opportunity for 8 consecutive hrs sleep / 24h he has close proximity to ARR at all times
3) no access to weapons 4) no PCS / deploy / or he to ARR at all times

SECTION 2: PATIENT INFORMATION, TO BE COMPLETED BY PATIENT

I have received full information on the proposed Limited Duty period from my provider. I understand that this period of limited duty is not effective until approved by the MTF Convening Authority, and that the MTF will report this LIMDU action to my parent command. I understand I may be returned to duty prior to the date appearing above as my clinical condition warrants and upon action by my attending provider.

Daniel Merwin

Patient Signature/Date

SECTION 3: TO BE COMPLETED BY PATIENT ADMINISTRATION OFFICER/MEDICAL BOARDS OFFICER

The following actions have been completed:

- ☒ Completion of Patient Information Sheet
- ☒ Notification to PSD/Personnel Office
- ☐ LODD Requested from Parent Command (if LODD required)
- ☐ Entry into MedBOLFF

☒ Briefing to Patient on Limited Duty/MEBs☒ Notification to MTF LIMDU Coordinator☒ Notification to Parent Command

Patient Administration Officer/Medical Boards Official Printed Name, Signature, and Date

ROUTING: Original to Patient Health Record; copies to Patient, Parent Command, PSD, MEBR Case File, and PERS-4821 or MMSR-4

Font must be 10 or 12 Pitch (10 or 12 point) only. Use upper and lower case. Submitted upon transfer to 02 National Mission Team. Executing a local UIC swap. - Deckplate leader. Led seven joint-service analysts in the review of 4,000 technical documents which produced 180 intelligence reports. Production resulted in the creation of 25 tailored defensive cyber options for USCYBERCOM's Cyber Protection Teams (CPT). - Outstanding Sailor. Dedicated over 300 hours to the establishment of USCYBERCOM's operational planning team in support of multiple CPTs. Collaborated with multiple National Security Agency offices and Joint organizations to create over 25 Defensive Cyber Operations options for USCYBERCOM's J3, leading to seven TASKORDs directing CPT operations. - Subject matter expert. Developed procedures to respond to 347 requests for information. Efforts led to the review of 57,000 documents and identified 25 critical information gaps. - Devoted mentor. Provided 40 hours of computer network exploitation training to nine joint-service cyber analysts. Qualified 7 of 9 personnel, resulting in an 80 percent increase in qualified analysts. - Command impact. Dedicated 40 hours of training to 260 Sailors on the Command's drug and alcohol program. Additionally provided Chart the Course training to 84 Sailors within his department meeting fleet standards ahead of required deadline. Highly recommended for advancement to Chief Petty Officer.

Evidence Review

Evidence reviewed (check all that apply):

☒ VA e-folder (VBMS or Virtual VA)

☒ Other (please identify other evidence reviewed):

The C-File was reviewed via VBMS. Dental records show the the pt. underwent orthodontic treatment 2015-2017 in conjunction with a LeForte single piece advancement of the maxilla 04/27/2017, with early residual of V2 hypoesthesia.

SECTION I: Diagnoses

1. Diagnosis

Does the Veteran now have or has he/she ever been diagnosed with an oral or dental condition? (This is the condition the Veteran is claiming or for which an exam has been requested)

☒ Yes ☐ No

☒ Other, specify:

Other diagnosis #1: Disturbance in sensation ,part of V2, residual oif orthognathic surgery
ICD code: R20.8
Date of diagnosis: 09/25/2017

SECTION II: Medical/Dental History

Describe the history (including onset and course) of the Veteran's oral and/or dental condition:

DENTAL C&P EXAMINATION

Form 21-2507 lists "Dental condition--S/P surgery in mouth and jaw" as the item for C&P Dental evaluation.

SUBJECTIVE:

CC: Pt. has had a Class III malocclusion corrected vua orthodontic treatemnt and orthognathic surgery, the latter in April, 2017. His upper front gingiva and was, but no longer is, numb. Part of the face bilaterally is numb, and a small part of the upper front gingiva is swollen, but these

problems are much improved and still slowly improving. He reports that he is gradually getting used to the new position of his front teeth.

SECTION III: Dental and Oral Conditions

Does the Veteran have any of the following dental or oral conditions?

☒ Yes ☐ No

☒ Other dental or oral conditions, pertinent physical findings or scars due to dental or oral conditions

1. Mandible, including anatomical loss or bony injury (NOT due to edentulous atrophy or periodontal disease)

Not Applicable

2. Maxilla, including anatomical loss or bony injury (NOT due to edentulous atrophy or periodontal disease)

Not Applicable

3. Teeth, including anatomical loss or bony injury leading to loss of any teeth (other than that due to the loss of the alveolar process as a result of periodontal disease)

Not Applicable

4. Mouth, lips, tongue and disfiguring scars to the mouth or lips (anatomical loss or injury)

Not Applicable

5. Osteomyelitis/osteoradionecrosis/osteonecrosis of the jaw

Not Applicable

6. Tumors and neoplasms

Not Applicable

7. Other pertinent physical findings, complications, conditions, signs, symptoms and scars
-

- a. Does the veteran have any other pertinent physical findings, complications, conditions, signs or symptoms related to the conditions listed in the diagnosis section above?

☒ Yes ☐ No

If yes, describe (brief summary):

Occlusion is WNL. Interdental papilla #8 and 9 is slightly swollen and erythematous but not sensitive or painful. Teeth # 5 through 12 have normal sensation. Portions of the facial skin over # 5 and 12 are numb to the touch. This is further addressed under DBQ Neuro Cranial Nerves.

- b. Does the veteran have any scars (surgical or otherwise) related to any conditions or to the treatment of any conditions listed in the Diagnosis Section above?

☐ Yes ☒ No

- c. Comments, if any:

No response provided.

SECTION IV: Diagnostic Testing

- a. Have imaging studies or procedures been performed?

☒ Yes ☐ No

☒ Panoraphic / intraoral imaging to demonstrate loss of teeth, mandible or maxilla

Date: 09/25/2017

Results:

Four L-shaped plates are attached to the anterior maxilla via screws, two each on the left and right, and two pins also are noted in the maxilla, one each on the left and right. The TMJs are WNL. Teeth # 1, 16, 17, and 32 are missing, and tooth # 12 is S/P RCT, no residual periapical radiolucency.

SECTION V: Functional Impact

1. Functional Impact

Questions for Historical Rating Criteria

=====

Is the Veteran's date of claim or date of intent to file, if applicable, on or prior to September 9, 2017?

[X] Yes [] No

If yes, please answer the additional questions below.

Historical 1a. Has the Veteran lost any part of the mandible to include the ramus (not due to edentulous atrophy or periodontal disease)?

[] Yes [X] No

If yes, indicate severity (check all that apply):

No response provided.

Historical 1d. Has the Veteran had an injury resulting in malunion or nonunion of the mandible?

[] Yes [X] No

If yes, indicate severity:

No response provided.

Historical 2e. Has the Veteran had an injury resulting in malunion or nonunion of the maxilla?

[] Yes [X] No

If yes, indicate severity:

No response provided.

7. Other pertinent physical findings, scars, complications, conditions, signs, symptoms and scars

No response provided.

8. Diagnostic testing

- a. Have imaging or other diagnostic studies been performed and are the results available?

[X] Yes ☐ No

If yes, provide type of study, date and results:

Panoramic dental radiograph 09/25/2017 shows plates, screws and pins in the anterior maxilla consistent with s/p maxillary advancement surgery and resulting areas of V2 numbness.

- b. Are there any other significant diagnostic test findings and/or results?

[X] Yes ☐ No

If yes, provide type of test or procedure, date and results (brief summary):

Brushing with a wooden tongue depressor reveals complete numbness of the surface of the skin in an oval area 2.0 x 1.0 cm of the left and right face over teeth # 5-6 and 11-12. The gingiva, lip, labial and buccal mucosae, and teeth have normal sensation. His inter-incisal ROM is 42 mm vertically and 20 mm laterally (i.e., WNL) and painless.

b. Does the Veteran have contraction of a visual field?
☐ Yes ☒ No

c. Does the Veteran have loss of a visual field?
☐ Yes ☒ No

d. Does the Veteran have a scotoma?
☐ Yes ☒ No

e. Does the Veteran have legal (statutory) blindness (visual field diameter of 20 degrees or less in the better eye, even if the corrected visual acuity is 20/20) based upon visual field loss?
☐ Yes ☒ No

SECTION IV: Eye conditions

1. Conditions

Does the Veteran have any of the following eye conditions?
☒ Yes ☐ No

If yes, check all that apply:

☒ Other eye conditions

14. Other eye conditions, pertinent physical findings, complications, conditions, signs and symptoms

Does the Veteran have any other eye conditions, pertinent physical findings, complications, conditions, signs or symptoms related to the condition at hand?
☒ Yes ☐ No

If yes, describe: 1. Current 2507 requests assessment for Dry eye syndrome.

2. S/P PRK completed while active duty, 2011, mild residual refractive error, correctable to good vision both eyes.

3. Dry eye syndrome, uses daily eyedrops in past, not visually significant at this time.

MEDICAL HISTORY OF CLAIMED CONDITION(S):
 SM Anderson is a 32 y.o. Caucasian male who is undergoing the IDES process @ the DC VAMC C&P Clinic. He presents to this appointment for the Skin and Scars portion of the examination.

Active Duty Service Dates - Navy: 11/01/2005 to present.

Pertinent Medical Hx of Claimed Conditions:

1. ALLERGIC TO CATS
 Reported history of allergies to dogs and cats since childhood. Improved after joining the military, especially during the 3 years on ship duty as there were no exposure to pets. Recurrence of symptoms around 2010 when SM Anderson was exposed to cats again, from "staying over at friend's with cats and parents' house". Symptoms included "skin itching, and I started having issues breathing." He takes Zyrtec and "over the counter inhalers". In the last 30 days, has had to take Zyrtec twice and one day use of inhaler due to overnight stay at a friend's house who has cats.
2. "SCARRING FROM MERSA BACK OF NECK AND TOP OF HEAD"
 Reported history of "a large bump on my neck...started having a fever" in 2007 while on ship duty. Records review confirmed onset of abscess in January of 2007. Please refer to handwritten Chronological Record of Medical Care dated 01/24/2007 as well as multiple subsequent STRs through to March 2007. Abscess on left neck and scalp were treated with oral antibiotics, topical antibiotics and I & D. SM reported recurrence of mild abscess on the left side of neck with every other haircut. Self-treats with over the counter antibiotic ointment with effective outcome. Lesion resolves in few days. Residual scars asymptomatic and stable.
3. HAIR LOSS
 SM reported noticing dry and flaky scalp in 2007 after MRSA abscess of the scalp. Since then, patch of alopecia on the crown of scalp has been

gradually enlarging. Status post evaluation by Dermatology and biopsies in

2015. Currently no interventions nor treatment.

RECORDS REVIEW GLEANING:

- 06/22/2015. WALTER REED NATIONAL MILITARY MEDICAL CNTR DERMATOLOGY CL.

"...The Chief Complaint is: Scalp. History of pre sent illness The Patient is

a 30 year old male. 30 y/o male. Per patient, has history of MRSA infection

on scalp about 5 to 6 years ago. Hair has never completely grown back.

More

recently has started to develop scale in same area as well as other areas of

scalp. Unsure if area has remained the same size. He feels it has been getting larger...Physical findings...Skin: Skin: Scalp: Approx 1.5 to 2 cm

annular patch of noticeably decreased hair density on posterior apex scalp.

Smaller but also annular area next to it. Slightly raised scar like plaque.

Follicle drop and tufting of hair noted. Mild erythema and scale...A/P Last

Updated by T AYLOR, BRADLEY M @ 23 Jun 2015 1135 EDT. 1. Alopecia: Tufted,

scarring alopecia on scalp after reported infection about 6 years ago.

Patient feels it is slowly progressing. Mild erythema and some scale which

feel most likely represents overlying mild seb derm but cannot completely rule out active scarring process. Discussed options with patient to include

treating for seb derm and monitoring response vs biopsy for further evaluation. Patient elected to proceed with biopsy. Two punch biopsies completed today. Perilesional and normal posterior scalp. Tolerated well..."

- 07/02/2015. Lab Test: Tissue Exam Specimen Source: TISSUE.

"...SPECIMEN:

A: Skin, Scalp, Punch B: Skin, Left scalp, Punch. FINAL DIAGNOSIS: A. SKIN,

SCALP, PUNCH BIOPSY: - MILD EARLY CHANGES OF ANDROGENETIC ALOPECIA. (SEE COMMENT).

B. SKIN, LEFT SCALP, PUNCH BIOPSY: - NORMAL SCALP.

Exam Results Continued

Is the Veteran able to perform repetitive use testing with at least three repetitions? ☒ Yes ☐ No

Is there additional functional loss or range of motion after three repetitions? ☐ Yes ☒ No

c. Repeated use over time

Right Hand

Is the Veteran being examined immediately after repetitive use over time?
☐ Yes ☒ No

If the examination is not being conducted immediately after repetitive use over time:

☐ The examination is medically consistent with the Veteran's statements describing functional loss with repetitive use over time.

☐ The examination is medically inconsistent with the Veteran's statements describing functional loss with repetitive use over time. Please explain.

☒ The examination is neither medically consistent or inconsistent with the Veteran's statements describing functional loss with repetitive use over time.

Does pain, weakness, fatigability or incoordination significantly limit functional ability with repeated use over a period of time?

☐ Yes ☐ No ☒ Unable to say w/o mere speculation

If unable to say w/o mere speculation, please explain:
Pt is not being examined after repetitive use over time

Left Hand

Is the Veteran being examined immediately after repetitive use over time?
☐ Yes ☒ No

If the examination is not being conducted immediately after repetitive

5/5 Normal strength

Hand grip:

Right: 5/5

Left: 5/5

b. Does the Veteran have muscle atrophy?

☐ Yes ☒ No

c. Comments, if any:

No response provided

5. Ankylosis

Complete this section if Veteran has ankylosis of any thumb or finger joints.

a. Indicate location, severity and side affected (check all that apply):

Right hand:

☒ No ankylosis

Left hand:

☒ No ankylosis

b. Does the ankylosis result in limitation of motion of other digits or interference with overall function of the hand?

☐ Yes ☒ No

c. Comments, if any:

No response provided

6. Other pertinent physical findings, complications, conditions, signs, symptoms and scars

a. Does the Veteran have any other pertinent physical findings, complications, conditions, signs or symptoms related to any conditions listed in the Diagnosis Section above?

☐ Yes ☒ No

b. Does the Veteran have any scars (surgical or otherwise) related to any conditions or to the treatment of any conditions listed in the Diagnosis Section above?

☐ Yes ☒ No

7. Assistive devices

a. Does the Veteran use any assistive devices?
☐ Yes ☒ No

b. If the Veteran uses any assistive devices, specify the condition and identify the assistive device used for each condition:
No response provided

8. Remaining effective function of the extremities

Due to the Veteran's hand, finger or thumb conditions, is there functional impairment of an extremity such that no effective function remains other than that which would be equally well served by an amputation with prosthesis? (Functions of the upper extremity include grasping, manipulation, etc., while functions for the lower extremity include balance and propulsion, etc.)

☐ Yes, functioning is so diminished that amputation with prosthesis would equally serve the Veteran.
☒ No

9. Diagnostic Testing

a. Have imaging studies of the hands been performed and are the results available?
☐ Yes ☒ No

b. Are there any other significant diagnostic test findings or results?
☐ Yes ☒ No

c. If any test results are other than normal, indicate relationship of abnormal findings to diagnosed conditions:
No response provided

10. Functional impact

Regardless of the Veteran's current employment status, do the condition(s) listed in the Diagnosis Section impact his or her ability to perform any type of occupational task (such as standing, walking, lifting, sitting, etc.)?

Diagnosis

Does the Veteran now have or has he/she ever been diagnosed with an
esophageal condition? Yes
Gastroesophageal reflux disease (GERD)
ICD code: R69 Date of diagnosis: 2016

Medical history

Description of the history (including onset and course) of the Veteran's
esophageal conditions: Heartburn in 2016, triggered by alcohol and sleeping
shortly after eating, now resolved with avoidance of triggers. Last episode
2 months ago. Not on any meds. No red flag s/s or prior EGD.

Does the Veteran's treatment plan include taking continuous medication for
the diagnosed condition? No

Signs and symptoms

Does the Veteran have any of the following signs or symptoms due to any
esophageal conditions (including GERD)? Yes
Sign and Symptoms:
Pyrosis
Reflux

Esophageal stricture, spasm and diverticula

Does the Veteran have an esophageal stricture, spasm of esophagus
(cardiospasm or achalasia), or an acquired diverticulum of the esophagus? No

Other pertinent physical findings, complications, conditions, signs, symptoms and
scars

Does the Veteran have any other pertinent physical findings, complications,
conditions, signs or symptoms related to any conditions listed in the
Diagnosis Section above? No

1. Diagnosis

Does the Veteran now have or has he/she ever had any condition of the rectum or anus?

[X] Yes [] No

[X] Internal or external hemorrhoids
ICD code: 799.9
Date of diagnosis: 2005

[X] Other, specify below:

Other diagnosis #1: no pathology found, "anal fissures"
ICD code: 799.9
Date of diagnosis: today

Other diagnosis #2: no pathology found, "anal spasms" (work up ongoing)
ICD code: 799.9
Date of diagnosis: today

2. Medical History

a. Describe the history (including onset and course) of the Veteran's rectum or anus conditions (brief summary):
CLAIM: hemorrhoids, anal fissures, anus spasms

Intermittent blood on toilet paper since 2010, diagnosed per SM as internal hemorrhoids by colonoscopy in 2005. Currently bleeding is infrequent. Not on any treatments.

Anal spasms are likely part of his IBS, however work up is ongoing.

Miscellaneous
Disability Benefits Questionnaire

Name of patient/Veteran: ANDERSON, DANIEL DENNIS

Please use this DBQ to address 1151 requests, or other issues that are not specifically addressed by specific DBQs such as Individual Unemployability (UI).

CLAIM: asthma

2017 allergy notes reviewed

SM has not been diagnosed with adult asthma. SM had childhood asthma. He now reports dyspnea and chest tightness on exposure to cats, dogs, and grass since ~2011.

Per allergy note 5/2017:

"History and symptoms could be consistent with allergic asthma, however, could also be due to VCD. If SPT negative, would consider referral to pulmonology for consideration of MCCT vs laryngoscopy to evaluate for asthma and VCD"

This further work up was never initiated and definitive diagnosis of dyspnea not made.

Based on above, no pathology found. SM was advised to re-file if/when a definitive diagnosis is made.

Intestinal Conditions (other than surgical or infectious),
including irritable bowel syndrome, Crohn's disease, ulcerative
colitis and diverticulitis

 Supervised By Date: 20121011081600
 Report Text: ADDITIONAL HISTORY: Abdominal pain.

TECHNIQUE: CT of the abdomen and pelvis was performed under standard abdomen/pelvis CT protocol with 5 mm axial helically acquired images obtained from the level of the diaphragm to the level of the pubic symphysis after the intravenous administration of 110 mL Isovue 370 and oral contrast. Coronal and sagittal reformatted images were also obtained.

COMPARISONS: Acute abdominal series 10/10/12.

FINDINGS:

Lung bases are clear.

Liver parenchyma and vasculature is unremarkable. Normal biliary tree without intra-or extrahepatic biliary ductal dilatation. Pancreas, spleen, adrenals, and kidneys are normal. No identifiable ureteral abnormalities. Fluid-filled urinary bladder is

unremarkable.

Enteric contrast visualized to the level of the mid ileum. Stomach is normal. There is fecal material and air noted within the distal ileum extending to a mildly distended stool filled cecum. The appendix is identified and is normal. There is a focal area of vascular prominence involving the mesentery at the level of the hepatic flexure. The colon wall at this level appears mildly thickened but otherwise decompressed. The colon distal to the hepatic flexure is decompressed and normal in appearance.

Shotty subcentimeter mesenteric lymph nodes about the upper abdomen. No intra-abdominal mass or fluid collection. Vascular structures are normal in configuration.

Pelvic organs are unremarkable. No free pelvic fluid. No pelvic or inguinal lymphadenopathy.

Soft tissues, muscles, and osseous structures are unremarkable.

IMPRESSION:

Focal colitis at the level of the hepatic flexure with proximal stool retention and fecalization of small bowel. Findings are nonspecific and may be representative of an acute infection or inflammatory etiology such as Crohn's disease. Clinical correlation is recommended.

Note: Findings above were discussed with Dr. Hardware, via telephone at 0450 hours on 10/11/12.

SECTION I: Diagnoses

NOTE: The diagnosis section should be filled out AFTER the clinician has completed the examination

Does the Veteran now have or has he/she ever been diagnosed with an eye condition (other than congenital or developmental errors of refraction)?

[X] Yes [] No

If yes, provide only diagnoses that pertain to eye conditions:

Diagnosis #1: Dry eye syndrome
ICD code(s): H04.123
Date of diagnosis: years

SECTION II: Medical history

Describe the history (including onset and course) of the Veteran's current eye condition(s) (brief summary): 1. Current 2507 requests assessment for Dry eye syndrome.

2. S/P PRK completed while active duty, 2011

3. Requires dry eye drops daily.

REVIEW OF OLD NOTES:

S/P PRK completed 2011

SECTION III: Physical examination

1. Visual acuity

a. Uncorrected distance:

Right: [] 5/200 or worse [] 5/200 [] 10/200 [] 15/200 [] 20/200
[] 20/100 [] 20/70 [] 20/50 [X] 20/40 or better

SSN: [REDACTED]

C-number: [REDACTED]

Exam Results Continued

ICD code: F41.1

If the Veteran currently has one or more mental disorders that conform to DSM-5 criteria, provide all diagnoses:

Mental Disorder Diagnosis #1: Generalized Anxiety Disorder
 ICD code: F41.1

Mental Disorder Diagnosis #2: Major Depressive Disorder, Recurrent,
 Moderate
 ICD code: F33.1

Mental Disorder Diagnosis #3: Alcohol Use Disorder, Moderate, in early
 remission
 ICD code: F10.20

- b. Medical diagnoses relevant to the understanding or management of the Mental Health Disorder (to include TBI): Irritable Bowel Syndrome, Headaches

2. Differentiation of symptoms

- a. Does the Veteran have more than one mental disorder diagnosed?

☒ Yes ☐ No

- b. Is it possible to differentiate what symptom(s) is/are attributable to each diagnosis?

☒ Yes ☐ No ☐ Not applicable (N/A)

If yes, list which symptoms are attributable to each diagnosis and discuss whether there is any clinical association between these diagnoses:

Symptoms of Major Depressive Disorder include chronic suicidal ideation, sad mood, low energy, feelings of helplessness and hopelessness, and anhedonia. Symptoms of Generalized Anxiety Disorder include worry thoughts, rumination, restlessness, sleep disturbance, and panic attacks. Symptoms of Alcohol Use Disorder include a maladaptive pattern of substance use, excessive use of alcohol, tolerance, and interpersonal/occupational problems as a result of use.

- c. Does the Veteran have a diagnosed traumatic brain injury (TBI)?
☐ Yes ☒ No ☐ Not shown in records reviewed

3. Occupational and social impairment

- a. Which of the following best summarizes the Veteran's level of occupational and social impairment with regards to all mental diagnoses? (Check only one)

☒ Occupational and social impairment with deficiencies in most areas, such as work, school, family relations, judgment, thinking and/or mood

- b. For the indicated level of occupational and social impairment, is it possible to differentiate what portion of the occupational and social impairment indicated above is caused by each mental disorder?
☐ Yes ☒ No ☐ No other mental disorder has been diagnosed

If no, provide reason that it is not possible to differentiate what portion of the indicated level of occupational and social impairment is attributable to each diagnosis:

Symptoms of Major Depressive Disorder and Generalized Anxiety Disorder both significantly contribute to the service member's level of occupational and social impairment, to the extent that it is not possible to tease out how each contributes independently of the other. Symptoms of Alcohol Use Disorder are in early remission.

- c. If a diagnosis of TBI exists, is it possible to differentiate what portion of the occupational and social impairment indicated above is caused by the TBI?
☐ Yes ☐ No ☒ No diagnosis of TBI

SECTION II:

Clinical Findings:

1. Evidence Review

Evidence reviewed (check all that apply):

2. History

a. Relevant Social/Marital/Family history (pre-military, military, and post-military):

The service member grew up in California. His parents divorced when the service member was young and he was raised by his father. He has two sisters with whom he grew up. He also has a half brother and a half sister. He reported that his childhood was unstable; his father was verbally abusive during childhood and "sometimes physically" [abusive].

The service member is single and has never been married. He is not currently dating anyone. No children. Socially, the service member reported that he has one good friend to whom he keeps in touch via text but he has few other social connections. He just started talking to his mother and sisters again this past year, "I've been living in isolation". He is not particularly close with anyone. The service member spends his free time alone, watching TV and doing programming.

b. Relevant Occupational and Educational history (pre-military, military, and post-military):

The service member did not do well in school. He typically got Ds and stated that, "I don't learn that well in school". He denied that he was ever tested for a learning disability. He graduated high school and moved out of state, he tried to go to college and started working. He joined the Navy at age 20.

The service member joined the Navy in November 2005. Rank is E5, rate is cryptologic technician networking. He is currently stationed at Ft. Meade where he has been since August 2012. He has also been stationed in Pensacola, Florida and USS Essex. No combat deployments.

c. Relevant Mental Health history, to include prescribed medications and family mental health (pre-military, military, and post-military):

No history of mental health treatment prior to the period of military service was reported.

The service member first began participating in mental health treatment

in August 2012. He has been in treatment regularly for the last several years. Current medications are Effexor, Rozerem, and Naltrexone. He just completed the Intensive Outpatient Program which he had done for 30 days. He meets with his psychiatrist weekly. He also participates in weekly individual therapy. He was hospitalized in 2015 for 30 days at Ft. Belvoir for inpatient substance abuse treatment. No other psychiatric hospitalizations.

According to the c-file, the service member has been diagnosed with Major Depressive Disorder, Generalized Anxiety Disorder and Alcohol Use Disorder.

- d. Relevant Legal and Behavioral history (pre-military, military, and post-military):

None

- e. Relevant Substance abuse history (pre-military, military, and post-military):

The service member stated that he has been sober for 70 days. Prior to this, he would have approximately 5 ounces of liquor per day and 2 beers daily. He started to drink heavily while he was stationed in Japan. He is currently going to substance abuse treatment at Walter Reed National Military Medical Center.

- f. Other, if any:

None

3. Symptoms

For VA rating purposes, check all symptoms that actively apply to the Veteran's diagnoses:

- ☒ Depressed mood
- ☒ Anxiety
- ☒ Near-continuous panic or depression affecting the ability to function independently, appropriately and effectively
- ☒ Chronic sleep impairment

- [X] Flattened affect
- [X] Disturbances of motivation and mood
- [X] Difficulty in establishing and maintaining effective work and social relationships
- [X] Difficulty in adapting to stressful circumstances, including work or a worklike setting
- [X] Suicidal ideation
- [X] Obsessional rituals which interfere with routine activities

4. Behavioral observations

 The service member reported that he started to have problems with anxiety while on the USS Essex. He stated that he experiences "anticipation anxiety" and he worries about "everything". He is worrying about scheduled appointments, uniform inspections, evaluations, "at the moment, it's been mostly work related". He stated that he picks his hair, he bites his nails, he is often fidgety. He stated that he feels restless, he feels tense and is "stressed out overall". He stated that he worrying 50-70% of the day and he has a hard time controlling the worry.

The service member also endorsed symptoms of depression. He has times when he will sleep most of the day, he will not want to engage in activities. He feels tired, experiences low motivation. He often feels flat and "I try not to think about the things that make me sad...if I do, I start to feel suicidal". He rated his mood at a 3 or 4 on a 10 point scale (with 10 being high). Appetite is low, in part due to medical issues (irritable bowel syndrome). Energy levels are low. He stated that he experiences anhedonia, he has times when he no longer engages in activities but he is trying to do programming more regularly. He reported feelings of helplessness and hopelessness about his life, his future. He stated that he had a time when he felt suicidal, he wondered about the purpose of life, why does he get up every day. He reported ongoing suicidal ideation, but he denied current suicidal plan or intent. He noted that when he is drinking, he experiences more frequent suicidal ideation. He had a suicide attempt at age 16 where he swallowed a bottle of aspirin, but he denied any other suicide attempts.

The service member endorsed sleep disturbances. He has an upcoming sleep study scheduled to rule out sleep apnea. He reported that he typically goes to bed at 10pm; he denied frequent sleep onset problems. Once asleep, the service member wakes up during the night, "there's usually three or four times a night". He might be awake for only "minutes" but he can fall right back asleep. He gets out of bed at 6am. He is bed for 7-8 hours but his sleep is restless. The service member also endorsed mild episodes of sleep paralysis which occur two or three times a week; he stated that it might

2. Diagnosis

RIGHT EAR

☒ Normal hearing☐ Conductive hearing loss ICD code:☐ Mixed hearing loss ICD code:☐ Sensorineural hearing loss (in the frequency range of 500-4000 Hz)*
ICD code:☐ Sensorineural hearing loss (in the frequency range of 6000 Hz or
higher frequencies)** ICD code:☐ Significant changes in hearing thresholds in service***

LEFT EAR

☒ Normal hearing☐ Conductive hearing loss ICD code:☐ Mixed hearing loss ICD code:☐ Sensorineural hearing loss (in the frequency range of 500-4000 Hz)*
ICD code:☐ Sensorineural hearing loss (in the frequency range of 6000 Hz or
higher frequencies)** ICD code:☐ Significant changes in hearing thresholds in service***

NOTES:

* The Veteran may have hearing loss at a level that is not considered to be a disability for VA purposes. This can occur when the auditory thresholds are greater than 25 dB at one or more frequencies in the 500-4000 Hz range.

** The Veteran may have impaired hearing, but it does not meet the criteria to be considered a disability for VA purposes. For VA purposes, the diagnosis of hearing impairment is based upon testing at frequency ranges of 500, 1000, 2000, 3000, and 4000 Hz. If there is no HL in the 500-4000 Hz range, but there is HL above 4000 Hz, check this box.

Exam Results Continued

*** The Veteran may have a significant change in hearing threshold in service, but it does not meet the criteria to be considered a disability for VA purposes. (A significant change in hearing threshold may indicate noise exposure or acoustic trauma.)

3. Etiology

[X] Etiology opinion not indicated as:

[X] VBA did not request etiology

4. Functional impact of hearing loss

Does the Veteran's hearing loss impact ordinary conditions of daily life, including ability to work: No

5. Remarks, if any, pertaining to hearing loss:

Veteran reports he is in the Navy (2005 to present). Veteran reports from 2005 to 2009 he worked as an aviation boatsman on the flight deck and from 2009 to present works as cryptologic technician networking. Contralateral acoustic reflexes were not performed bilaterally; DBQ could not be completed without filling in these sections.

SECTION 2: TINNITUS

1. Medical history

Does the Veteran report recurrent tinnitus: Yes

Date and circumstances of onset of tinnitus: Veteran reports tinnitus began in 2010. Circumstance of onset of tinnitus is reportedly unknown.

2. Etiology of tinnitus

[X] Etiology opinion not indicated as:

[X] VBA did not request etiology

3. Functional impact of tinnitus

Does the Veteran's tinnitus impact ordinary conditions of daily life, including ability to work: Yes

If yes, describe impact in the Veteran's own words: Veteran reports

SUBSPECIALTY SHA
SKIN/SCAR

MEDICAL HISTORY OF CLAIMED CONDITION(S):

SM Anderson is a 32 y.o. Caucasian male who is undergoing the IDES process @ the DC VAMC C&P Clinic. He presents to this appointment for the Skin and Scars portion of the examination.

Active Duty Service Dates - Navy: 11/01/2005 to present.

Pertinent Medical Hx of Claimed Conditions:

1. ALLERGIC TO CATS

Reported history of allergies to dogs and cats since childhood. Improved after joining the military, especially during the 3 years on ship duty as there were no exposure to pets. Recurrence of symptoms around 2010 when SM Anderson was exposed to cats again, from "staying over at friend's with cats and parents' house". Symptoms included "skin itching, and I started having issues breathing." He takes Zyrtec and "over the counter inhalers". In the last 30 days, has had to take Zyrtec twice and one day use of inhaler due to overnight stay at a friend's house who has cats.

2. "SCARRING FROM MERSA BACK OF NECK AND TOP OF HEAD"

Reported history of "a large bump on my neck...started having a fever" in 2007 while on ship duty. Records review confirmed onset of abscess in January of 2007. Please refer to handwritten Chronological Record of Medical Care dated 01/24/2007 as well as multiple subsequent STRs through to March 2007. Abscess on left neck and scalp were treated with oral antibiotics, topical antibiotics and I & D. SM reported recurrence of mild abscess on the left side of neck with every other haircut. Self-treats with over the counter antibiotic ointment with effective outcome. Lesion resolves in few days. Residual scars asymptomatic and stable.

3. HAIR LOSS

SM reported noticing dry and flaky scalp in 2007 after MRSA abscess of the scalp. Since then, patch of alopecia on the crown of scalp has been gradually enlarging. Status post evaluation by Dermatology and biopsies in 2015. Currently no interventions nor treatment.

RECORDS REVIEW GLEANING:

- 06/22/2015. WALTER REED NATIONAL MILITARY MEDICAL CNTR DERMATOLOGY CL.
 "...The Chief Complaint is: Scalp. History of pre sent illness The Patient is a 30 year old male. 30 y/o male. Per patient, has history of MRSA infection on scalp about 5 to 6 years ago. Hair has never completely grown back. More recently has started to develop scale in same area as well as other areas of scalp. Unsure if area has remained the same size. He feels it has been getting larger...Physical findings...Skin: Skin: Scalp: Approx 1.5 to 2 cm annular patch of noticeably decreased hair density on posterior apex scalp. Smaller but also annular area next to it. Slightly raised scar like plaque. Follicle drop and tufting of hair noted. Mild erythema and scale...A/P Last Updated by T AYLOR, BRADLEY M @ 23 Jun 2015 1135 EDT. 1. Alopecia: Tufted, scarring alopecia on scalp after reported infection about 6 years ago. Patient feels it is slowly progressing. Mild erythema and some scale which feel most likely represents overlying mild seb derm but cannot completely rule out active scarring process. Discussed options with patient to include treating for seb derm and monitoring response vs biopsy for further evaluation. Patient elected to proceed with biopsy. Two punch biopsies completed today. Perilesional and normal posterior scalp. Tolerated well..."

- 07/02/2015. Lab Test: Tissue Exam Specimen Source: TISSUE. "...SPECIMEN: A: Skin, Scalp, Punch B: Skin, Left scalp, Punch. FINAL DIAGNOSIS: A. SKIN, SCALP, PUNCH BIOPSY: - MILD EARLY CHANGES OF ANDROGENETIC ALOPECIA. (SEE COMMENT).
 B. SKIN, LEFT SCALP, PUNCH BIOPSY: - NORMAL SCALP.
 COMMENT: The sections were difficult to interpret due to processing and orientation. In part A, the sections show a normal number of terminal hair follicles with a slightly increased number of vellus hairs. Mild superficial perifollicular lymphocytic inflammation is present. Evidence of scarring alopecia is not present in multiple additional step sections. If clinically indicated additional biopsies may be helpful..."

- 09/29/2015. WALTER REED NATIONAL MILITARY MEDICAL CNTR DERMATOLOGY CL.
 "...Physical findings...Skin: Multiple skin lesions. Lesions located. Lesions on the scalp Vertex scalp with short vellus hairs, mild bogginess of scalp and mild erythema with generalized mild scale. Pustule on R parietal scalp...A/P Last Updated by CUNNINGHAM, RACHEL E @ 29 Sep 2015 1037 EDT... 2. FOLLICULITIS DECALVANS: Tufted folliculitis in the past on biopsy with scarring alopecia from inflammation and manipulation. Continued reports of itching, flaking and occasional pustules. Will use topical steroid solution daily as needed with antifungal shampoo. Medication(s): -FLUOCINOLONE--TOP 0.01% SOLN - APPLY TO SCALP EVERY DAY AS NEEDED #1 RF3 Ordered..."

Mild erythema and scale...A/P Last Updated by T AYLLOR, BRADLEY M @ 23 Jun 2015 1135 EDT. 1. Alopecia: Tufted, scarring alopecia on scalp after reported infection about 6 years ago. Patient feels it is slowly progressing. Mild erythema and some scale which feel most likely represents overlying mild seb derm but cannot completely rule out active scarring process. Discussed options with patient to include treating for seb derm and monitoring response vs biopsy for further evaluation. Patient elected to proceed with biopsy. Two punch biopsies completed today. Perilesional and normal posterior scalp. Tolerated well..."

A: Skin, Scalp, Punch B: Skin, Left scalp, Punch. FINAL DIAGNOSIS: A. SKIN, SCALP, PUNCH BIOPSY: - MILD EARLY CHANGES OF ANDROGENETIC ALOPECIA. (SEE COMMENT).

B. SKIN, LEFT SCALP, PUNCH BIOPSY: - NORMAL SCALP.

COMMENT: The sections were difficult to interpret due to processing and orientation. In part A, the sections show a normal number of terminal hair follicles with a slightly increased number of vellus hairs. Mild superficial perifollicular lymphocytic inflammation is present. Evidence of scarring alopecia is not present in multiple additional step sections. If clinically indicated additional biopsies may be helpful..."

- 09/29/2015. WALTER REED NATIONAL MILITARY MEDICAL CNTR DERMATOLOGY CL. "...Physical findings...Skin: Multiple skin lesions. Lesions located. Lesions on the scalp Vertex scalp with short vellus hairs, mild bogginess of scalp and mild erythema with generalized mild scale. Pustule on R parietal scalp...A/P Last Updated by CUNNINGHAM, RACHEL E @ 29 Sep 2015 1037 EDT... 2. FOLLICULITIS DECALVANS: Tufted folliculitis in the past on biopsy with scarring alopecia from inflammation and manipulation. Continued reports of itching, flaking and occasional pustules. Will use topical steroid solution daily as needed with antifungal shampoo. Medication(s): -FLUOCINOLONE--TOP 0.01% SOLN - APPLY TO SCALP EVERY DAY AS NEEDED #1 RF3 Ordered..."

4. SKIN CONDITION TO INCLUDE SCROTAL CYST

SM reported recurrent cysts on scrotum since 2011. Has had as many as 6 lesions at the same time. Was evaluated by Dermatology in June 2017 and 3 lesions were excised and biopsied.

RECORDS REVIEW GLEANING:

- 09/29/2015. WALTER REED NATIONAL MILITARY MEDICAL CNTR DERMATOLOGY CL. "...The Chief Complaint is: Rash...30 yo M with 1 month hx of painful eroded papules in the groin and on the penis, ST D workup negative per PCM and previous course of valtrex did not improve. Has hx of multiple sexual partners. Here for further evaluation, notes he does have hx of genital warts and uses aldara on them but has not been using it on the areas in question. Partner currently does not have any ST D or similar rash. Uses condoms. Has recently had bronchitis with subjective fevers which began before the papules appeared. HIV testing recently negative...Physical findings...Skin: Multiple skin lesions. Lesions located. Lesions on the scalp Vertex scalp with short vellus hairs, mild bogginess of scalp and mild erythema with generalized mild scale. Pustule on R parietal scalp. Perineal lesions. Lesions in the inguinal region. Punched out erythematous eroded papules on L and R

☐ Yes ☒ No

- d. Does the Veteran have any systemic manifestations due to any skin diseases (such as fever, weight loss or hypoproteinemia associated with skin conditions such as erythroderma)?

☐ Yes ☒ No

- e. Comments, if any:

No response provided.

3. Treatment

- a. Has the Veteran been treated with oral or topical medications in the past 12 months for any skin condition?

☒ Yes ☐ No☒ Antihistamines

If checked, list medication(s): ZYRTEC

Specify condition medication used for: Environmental Allergies to cats

Total duration of medication use in past 12 months:

☒ < 6 weeks☐ 6 weeks or more, but not constant☐ Constant/near-constant

- b. Has the Veteran had any treatments or procedures other than systemic or topical medications in the past 12 months for exfoliative dermatitis or papulosquamous disorders?

☐ Yes ☒ No

4. Debilitating and non-debilitating episodes

- a. Has the Veteran had any debilitating episodes in the past 12 months due to urticaria, primary cutaneous vasculitis, erythema multiforme, or toxic epidermal necrolysis?

☐ Yes ☒ No

- b. Has the Veteran had any non-debilitating episodes of urticaria, primary cutaneous vasculitis, erythema multiforme, or toxic epidermal necrolysis in the past 12 months?

☐ Yes ☒ No

- a. Indicate the Veteran's visible skin conditions; indicate the approximate total body area and approximate total EXPOSED body area (face, neck and hands) affected on current examination (check all that apply):

☒ The Veteran does not have any of the above listed visible skin conditions

6. Specific Skin Conditions

 Indicate the Veteran's specific skin conditions and complete all applicable subsequent questions (check all that apply):

☒ Scarring alopecia

If checked, indicate percent of scalp affected:

☒ < 20% ☐ 20 to 40% ☐ > 40%

7. Tumors and neoplasms

- a. Does the Veteran have a benign or malignant neoplasm or metastases related to any of the diagnoses in the Diagnosis section?
☐ Yes ☒ No

8. Other pertinent physical findings, complications, conditions, signs or symptoms

- a. Does the Veteran have any other pertinent physical findings, complications, conditions, signs or symptoms related to any conditions listed in the Diagnosis Section above?
☒ Yes ☐ No

If yes, describe:

Claimed condition (Verbatim from 2507): ALLERGIC TO CATS
 - No active lesions found on today's exam. No active exposure today.
 - % total body area affected: 0%
 - % exposed area affected: 0%
 - Severity: Inactive on today's exam
 - DIAGNOSIS: ALLERGY TO CATS AND DOGS (ICD Code L23.81)
 Date of Dx: History of Allergies to Cats and Dogs since childhood
 Rationale: Please refer to med hx
 Prognosis: With allergen exposure

Claimed condition (Verbatim from 2507): "SCARRING FROM MERSA BACK OF NECK AND TOP OF HEAD"

- LEFT LATERAL NECK: No scarring found for measurement. Mobile nodule of 0.5 cm or less, flesh color, non-erythematous, non-pustular.
- CROWN OF SCALP: Please refer to Hair Loss condition below.
- % total body area affected: <5%
- % exposed area affected: <5%
- Severity: Inactive Folliculitis of the left neck
- DIAGNOSIS: a) LEFT NECK - FOLLICULITIS, INACTIVE, NO RESIDUAL SCAR (ICD Code L73.91); b) SCALP - PLEASE REFER TO HAIR LOSS BELOW (ICD Code Please see Hair Loss Condition)
- Date of Dx: 1/18/2017
- Rationale: Please refer to med hx and physical exam
- Prognosis: N/A

Claimed condition (Verbatim from 2507): HAIR LOSS

- Vertex Scalp: Patch alopecia measuring approx 2.5 cm x 2 cm. Smooth surface with absence of follicular orifice with the exception of a few tufting of hair within the alopecia patch. Mild scaling and erythema on periphery of alopecia. No active pustules noted on this exam.
- % total body area affected: <5%
- % exposed area affected: <5%
- Severity: Measures 2.5 cm x 2 cm on today's exam. Last measurement on 06/22/2015 was ~1.5 to 2 cm patch.
- DIAGNOSIS: SCARRING ALOPECIA - FOLLICULITIS DECALVANS (ICD Code L66.2)
- Date of Dx: 09/29/2015
- Rationale: Please refer to med hx and physical exam
- Prognosis: Ongoing

Claimed condition (Verbatim from 2507): SKIN CONDITION TO INCLUDE SCROTAL CYST

- Three subcutaneous, flesh color, non-erythematous, non-tender, non-draining, mobile cysts of less than 0.3 cm noted on right scrotum.
- % total body area affected: <5%
- % exposed area affected: 0%
- Severity: Mild
- DIAGNOSIS: EPIDERMAL CYST OF THE SCROTUM (ICD Code L72.0)
- Date of Dx: 06/21/2017
- Rationale: Please refer to med hx and physical exam
- Prognosis: Improved

Exam Results Continued

He started having this problem around 2014. He was treated with physical therapy. Besides physical therapy he has not had any other treatment so far.

***STRs: Reviewed of STRs showed that veteran was treated for left ankle sprain in November 2013 and June 2014. These injuries resolved with no residual. There was no problem related to left ankle documented on Medical Evaluation Board Reported dated 7/13/2017.

- b. Does the Veteran report flare-ups of the ankle?
☐ Yes ☒ No
- c. Does the Veteran report having any functional loss or functional impairment of the joint or extremity being evaluated on this DBQ (regardless of repetitive use)?
☒ Yes ☐ No

If yes, document the Veteran's description of functional loss or functional impairment in his or her own words:

Veteran stated that he cannot be active as before due to left ankle pain.

3. Range of motion (ROM) and functional limitations

a. Initial range of motion

Right ankle

- ☒ All Normal
☐ Abnormal or outside of normal range
☐ Unable to test (please explain)
☐ Not indicated (please explain)

Dorsiflexion (0-20): 0 to 20 degrees
 Plantar Flexion (0-45): 0 to 45 degrees

Description of pain (select best response):
 No pain noted on exam

Is there evidence of pain with weight bearing? ☐ Yes ☒ No

Is there objective evidence of localized tenderness or pain on palpation of the joint or associated soft tissue? ☐ Yes ☒ No

Is there objective evidence of crepitus? ☐ Yes ☒ No

11. Remaining effective function of the extremities

 Due to the Veteran's ankle condition, is there functional impairment of an extremity such that no effective functions remain other than that which would be equally well served by an amputation with prosthesis? (Functions of the upper extremity include grasping, manipulation, etc., while functions for the lower extremity include balance and propulsion, etc.)

[] Yes, functioning is so diminished that amputation with prosthesis would equally serve the Veteran.

[X] No

12. Diagnostic testing

- a. Have imaging studies of the ankle been performed and are the results available? [X] Yes [] No

If yes, is degenerative or traumatic arthritis documented?

[] Yes [X] No

- b. Are there any other significant diagnostic test findings or results?

[X] Yes [] No

If yes, provide type of test or procedure, date and results (brief summary):

Report Text: Comparison: MRI October 5, 2014 and prior radiographs
May 6, 2014

Findings: Routine radiographs of the ankle were obtained. Normal alignment is present without evidence for acute fracture or dislocation. There is mild lateral soft tissue swelling present. The ankle mortise and talar dome are intact. The joint spaces are preserved without significant degenerative changes.

Impression: Lateral soft tissue swelling without evidence for acute bony abnormality

For DBQ MUSC Ankle Exam

SSN: [REDACTED]

C-number: [REDACTED]

Exam Results Continued

TECHNIQUE: WRNMMC MRI of the left ankle was performed utilizing standard imaging sequences (3 plane localizer, axial T1, axial PD fat-sat, coronal T1, coronal PD fat-sat, sagittal T1, sagittal PD fat-sat). No intravenous or intra-articular contrast was administered. Subsequently, MRI of the forefoot was obtained to include 3 plane localizer, coronal T1, coronal PD fat-sat, axial T1, sagittal T1, axial PD fat-sat, sagittal PD fat-sat.

FINDINGS: ANKLE: A skin marker was placed along the anterolateral aspect of the lower leg at the site of symptoms.

Plantar aponeurosis: within normal limits.

Tendons Achilles' tendon: within normal limits.

Peroneal tendons: within normal limits.

Flexor tendons: Apart from minimal fluid accumulation at the knot of Henry, the flexor tendons about the ankle are otherwise within normal limits.

Extensor tendons: within normal limits.

Ligaments: Syndesmotomic ankle ligaments: within normal limits.

Low lateral ankle ligaments: The anterior talofibular ligament appears thickened. Calcaneofibular and posterior talofibular ligaments are within normal limits.

Deltoid ligamentous complex: within normal limits.

Spring ligamentous complex: within normal limits.

Lisfranc ligament: within normal limits.

Sinus tarsi and tarsal tunnel: within normal limits.

Muscle morphology and signal intensity: within normal limits.

Bone morphology and signal intensity: within normal limits.

Chondral surfaces: within normal limits.

FOREFOOT: Tendons: Distal peroneal tendons: within normal limits.

Distal flexor tendons: within normal limits.

Distal extensor tendons: within normal limits.

Ligaments: Intermetatarsal ligaments: within normal limits.

Lisfranc ligament: within normal limits.

The plantar plate and capsular ligamentous structures about the metatarsal phalangeal and interphalangeal joints of the forefoot are within normal limits.

Recesses and Bursae: No evidence of Morton's neuroma or intermetatarsal bursitis.

Muscle morphology and signal intensity: within normal limits.

Bone morphology and signal intensity: Mild degenerative changes are seen at the 1st metatarsophalangeal joint.

IMPRESSION: Findings suggestive of prior lateral ankle sprain.

Exam Results Continued

Regardless of the Veteran's current employment status, do the condition(s) listed in the Diagnosis Section impact his or her ability to perform any type of occupational task (such as standing, walking, lifting, sitting, etc.)?
[] Yes [X] No

14. Remarks, if any

Claimed Condition: ankle condition left.
Onset: 2013 and 2014
Diagnosis: Left ankle sprain resolved with no residual.

***STRs: Reviewed of STRs showed that veteran was treated for left ankle sprain in November 2013 and June 2014. These injuries resolved with no residual. There was no problem related to left ankle documented on Medical Evaluation Board Reported dated 7/13/2017.

Correia Criteria:

1. Is there evidence of pain on left ankle's ROM testing: No.
2. Is there evidence of pain when left ankle joint is used in non-weight bearing? No.

Foot Conditions, including Flatfoot (Pes Planus)

Evidence Review

Evidence reviewed (check all that apply):

- ☒ VA e-folder (VBMS or Virtual VA)
☒ CPRS

1. Diagnosis

a. List the claimed condition(s) that pertain to this DBQ:

ingrown toe nail left foot.

b. Select diagnoses associated with the claimed condition(s):

☒ Other (specify):

Other diagnosis: Paronychia left hallux.

Side affected: Left

ICD code: 388983002

Date of diagnosis (left side): 9/10/2017

c. Comments (if any):

No response provided

d. Was an opinion requested about this condition (internal VA only)?

☐ Yes ☒ No ☐ N/A

2. Medical history

a. Describe the history (including onset and course) of the Veteran's foot condition (brief summary):

Claimed Condition: ingrown toe nail left foot.

Veteran stated that he dropped a weight on top of his left foot while on the ship around 2007. Since then he developed ingrown nail problem in left big toe. He has tried to self treat it with neosporin ointment so far.

provide rationale below.
No response provided

13. Functional loss and limitation of motion

a. Contributing factors of disability (check all that apply and indicate side
affected):

[X] No functional loss for left lower extremity attributable to claimed
condition

[X] No functional loss for right lower extremity attributable to claimed
condition

Contributing factors of disability associated with limitation of motion:

b. Is there pain, weakness, fatigability, or incoordination that significantly
limits functional ability during flare-ups or when the foot is used
repeatedly over a period of time?

RIGHT FOOT: [] Yes [X] No

LEFT FOOT: [] Yes [X] No

c. Is there any other functional loss during flare-ups or when the foot is used
repeatedly over a period of time?

RIGHT FOOT: [] Yes [X] No

LEFT FOOT: [] Yes [X] No

14. Other pertinent physical findings, complications, conditions, signs,
symptoms and scars

a. Does the Veteran have any other pertinent physical findings, complications,
conditions, signs or symptoms related to any conditions listed in the
Diagnosis section above?

[X] Yes [] No

If yes, describe (brief summary):

Left hallux: mild edema and erythema on both medial and lateral nail fold.

- b. Does the Veteran have any scars (surgical or otherwise) related to any conditions or to the treatment of any conditions listed in the Diagnosis section above?
☐ Yes ☒ No

c. Comments: No comments provided

15. Assistive devices

- a. Does the Veteran use any assistive devices as a normal mode of locomotion, although occasional locomotion by other methods may be possible?
☐ Yes ☒ No

- b. If the Veteran uses any assistive devices, specify the condition and identify the assistive device used for each condition:
No response provided.

16. Remaining effective function of the extremities

Due to the Veteran's foot condition, is there functional impairment of an extremity such that no effective function remains other than that which would be equally well served by an amputation with prosthesis? (Functions of the upper extremity include grasping, manipulation, etc., while functions for the lower extremity include balance and propulsion, etc.)

- ☐ Yes, functioning is so diminished that amputation with prosthesis would equally serve the Veteran.
☒ No

17. Diagnostic testing

- a. Have imaging studies of the foot been performed and are the results available?
☐ Yes ☒ No
- b. Are there any other significant diagnostic test findings or results?
☐ Yes ☒ No
- c. If any test results are other than normal, indicate relationship of abnormal

=====

Exam Results Continued

The location of headache is over the crown of the head and in back of the head
 and sometimes behind the eye.
 Currently the frequency of these headaches is 2-3 headaches a week.
 Intensity is 7-8/10. Will lay in bed if it gets too bad. Sometimes Alleve will work; the duration is usually 4-5 hours long; cannot do anything when I have a headache; if at home goes to bed or waits until it goes away; it hurts to move (due to headache); if at work just stares at screen;
 Sometimes is aware of when headache is about to happen - gets twitching in left eye.
 Takes alleve or excedrin for relief as needed

- b. Does the Veteran's treatment plan include taking medication for the diagnosed condition?
☒ Yes ☐ No

If yes, describe treatment (list only those medications used for the diagnosed condition):
 uses alleve and excedrin as needed

3. Symptoms

-
- a. Does the Veteran experience headache pain?
☒ Yes ☐ No
☒ Pulsating or throbbing head pain
☒ Pain on both sides of the head
☒ Pain worsens with physical activity
☒ Other, describe:
 pain is in the middle of the head, not left or right either in front or back of head
- b. Does the Veteran experience non-headache symptoms associated with headaches? (including symptoms associated with an aura prior to headache pain)
☒ Yes ☐ No
☒ Nausea
☒ Sensitivity to light
☒ Sensitivity to sound
- c. Indicate duration of typical head pain
☒ Less than 1 day
- d. Indicate location of typical head pain
☒ Both sides of head

Exam: MRI, BRAIN W W/O CON CPT:

Report Status: FINAL Date Verified: 04/15/2016 08:18
Reason For Order:
Procedure: MRI, BRAIN W W/O CON

Report Text: Brain MRI without and with gadolinium: 04/15/16 04:48:00.

History: 31 y/o M with acute onset distortion taste, Please evaluate
olfactory nerves for pathology, and brain for possible
pathology, please use gad.

Technique: Sagittal T1, axial and coronal T2, axial T2 FLAIR, axial DWI,
axial GRE, axial T1, axial post T1 FS, coronal post 3D SPGR
of the brain. A total of 16 mL of ProHance was given intravenously as
part of the study.

FINDINGS: No focal mass lesion or abnormal enhancement along the
expected course of either olfactory bulb or groove is seen. There
is normal appearance of both olfactory bulb and nerves.

Acute: No hemorrhage, herniation, or hydrocephalus. No evidence of
acute ischemia.

Brain: Brain parenchyma is within normal limits in signal and volume for
age.

Vessels: No abnormal intravascular signal to suggest thrombosis. There
is note of a tubular enhancing structure posteriorly in the
left cerebellar hemisphere compatible with an incidental developmental
venous anomaly

Bones: No suspicious lesion in the calvarium or skull base.

Other: Extracranial soft tissues are unremarkable.

2. Medical history

a. Describe the history (including onset and course) of the Veteran's sleep disorder condition (brief summary):

claimed condition: sleep paralysis (sleep study date 10/4/2017)

In 2012, this 32 year old SM began to experience excessive daytime sleepiness, morning headaches, gasping awake, frequent awakenings, at least 3-4 times per night, no difficulty falling back to sleep, no difficulty falling asleep.

Often feels like dozing even while driving; no vehicular accidents due to dozing

When going to sleep, I can feel my body jerking to sleep, but unable to move body, happens about 50% of the time, (sleep paralysis); sometimes my jerking will wake me from sleep; no symptoms of restless legs; sometimes will wake up with sleep paralysis, stuck in a position and cannot move; I have to force myself awake to be able to move; sometimes feels like woken up but not really - thinks awake but really not.

No cataplexy; no hypnagogic hallucinations;

Goes to sleep at 10 pm and wakes at 6-7 am; feels like sleep is non-refreshing;

Falls asleep sitting at desk job currently.

Sitting and reading 3- high chance of dozing

watching TV - 2 -moderate chance of dozing

sitting inactive in public place - 2

as a passenger in a car - 3

lying down in afternoon - 3

Epworth sleepiness scale score is 21/24

Was seen in sleep clinic at Walter Reed:

12 Oct 2017 1254

The Chief Complaint is:
Difficulty staying asleep.eg
History of present illness g2
The Patient is a 32 year old male.
He reported: Military service in the Navy and currently on
active duty.

Patient reports gasping , witnessed apnea, difficulty
staying asleep , non
refreshing sleep, hypersomnia, feeling tired,

Assessment/Plan: The patient presents with some symptoms
suggestive of
Obstructive Sleep Apnea. y. Polysomnography/split has been
ordered.
Discussed with patient OSA, Insufficient Sleep Syndrome
(ISS) and nasal
congestion. The patient was counseled to maintain an ideal
body weight to
reduce the severity of the disease and related
complications. The risks of
alcohol and other sedatives were discussed. The patient was
educated on
positional therapy. The patient was counseled to avoid
driving while
excessively sleepy. (was stressed to patient with
hypersomnia) !!!eg

POLYSOMNOGRAM REPORT

Technical Description:

Physiologic data were collected using a computerized
Sensormedics polygraph interfaced with Somnostar Z4 amplifiers. The
recording montage consisted of central, frontal and occipital EEG,
EOG, chin EMG, thermocouple and pressure transducer airflow,
chest and diaphragmatic movement, combined leg EMG, tracheal sounds
and pulse oximetry. The patient was monitored throughout the
study via infrared CCTV and recorded for review. Respiratory events
and limb movements were scored according to The AASM Manual for
the Scoring of Sleep and Associated Events, Version 2.3.

Polysomnographic Data:

The patient took 3mgs Eszopiclone prior to the study. The
study duration was 419.5 minutes. The recorded total sleep time was
367.5 minutes with a sleep efficiency of 87.6%. The patients
latency to sleep was 16.5 minutes. The REM latency was 174.5

 For DBQ NEURO Headaches (including migraine headaches) Exam
 =====

Exam Results Continued

minutes.
 Sleep stage distribution revealed 12.9% Stage N1, 58.1% Stage N2, 16.1% Stage N3, 12.9% Stage REM and wake after sleep onset was 35 minutes. There were 100 arousals and 0 awakenings resulting in a total arousal index (TAI) of 16.3/hour of sleep.
 There were 0 apneas (0 obstructive, 0 centrals, 0 mixed) and 37 hypopneas with an apnea hypopnea index(AHI) of 6./hour. The apnea hypopnea index during supine sleep(88 minutes) was 19/hour and 2/hour during non-supine sleep(280 minutes). The hypopnea index was 6./hour. The Central apnea index was 0/hour. Hypopneas were scored using nasal pressure signal drop by at least 30% followed by arousal or 3% oxygen desaturation..
 Oxygen saturation was normal at baseline. Oxygen saturation remained between 86% and 97% with mean value of 95% throughout the study. During the study the oxygen saturation was below 90% for 1 percent of the total sleep time. The average heart rate was 73 beats per minute. There were 0 PLMS and 0 PLMS with arousals with a PLMS index of 0/hour and a PLMS arousal index of 0/hour.

Medical Interpretation:

The patient underwent a Diagnostic PSG: Epworth Sleepiness Scale was 20/24. Sleep efficiency was good and there was adequate total sleep time to establish a diagnosis. Sleep architecture was disrupted. The patient had an AHI consistent with mild sleep apnea. The EKG did not demonstrate arrhythmias.

Diagnosis:

1.Obstructive Sleep Apnea(G47.33)

Suggestions for Clinical Care:

- 1.AutoPAP titration with pressures of 6-15 cm H2O and close clinical follow up.
- 2.Recommend sleeping in the lateral position, obtaining 7-8 hours of sleep per night, avoid of alcohol or other sedatives and maintaining an ideal body weight as these can improve sleep quality.
- 3.The patient should be counseled- as is done with all patients directly seen at this SDC- not to engage in any hazardous activities (such as driving) if excessively sleepy. Such sleepiness is to be reported to their physicians for further evaluation and treatment.

b. Are there any other significant diagnostic test findings and/or results?

Exam Results Continued

[] Yes [X] No

6. Functional impact

Does the Veteran's sleep apnea impact his or her ability to work?

[X] Yes [] No

If yes, describe impact of the Veteran's sleep apnea, providing one or more examples:

excessive daytime sleepiness impacts ability to stay awake at work and be able to focus and concentrate

7. Remarks, if any:

No remarks provided.

IMPARTIAL PROVIDER REVIEW REQUEST (IPR)

I have reviewed the contests of the MEB packet and reviewed the attached Form 6100/1, NARSUM and the LIMDU (Form 6100/5). I have been granted **FIVE** (5) calendar days to concur, non-concur or request and IPR.

The PEBLO has provided me with the information on the IPR. The IPR is designed to provide the service member with an impartial review of his/her medical board findings. The review will ensure the MEB adequately reflected the complete spectrum of the service member injuries and/or illnesses.

Please circle and initial your selection below:

- a. No, I do not request an impartial medical review of my MEB.
- b. Yes, I request an impartial medical review of my MEB

(1) An impartial health care provider (not associated with your MEB) will be assigned to review your medical board to ensure the complete spectrum of injuries and/or illnesses has been addressed.

(2) After assignment, the impartial healthcare provider will have five calendar days to review your case and provide you feedback.

(3) After the review with the impartial healthcare provider you will have the opportunity to concur with the findings of the medical board or submit an appeal.

(4) Upon review of your MEB and IPR findings with your PEBLO you will be allotted **seven** (7) calendar days to make an election and to submit your appeal.

Paternal grandmother's history of HPI [use for free text] on 25 Aug 2016

Date Onset:	25 Aug 2016	Date Reported:	25 Aug 2016
Source:	Clinical Evidence	Relationship:	Paternal Grandmother
Status:	Active		
Comment:	<<Note accomplished in TSWF-IBHC Anxiety tab>>~ ~Description of Symptoms: Extreme mood swings with depression and anxiety, irritability, concentration problems, poor sleep, fatigue, racing heart and thoughts, trouble relaxing, and worrying. PT reported dry heaving episodes for the past 2 years and pulling the hair off a spot on his scalp since 2008. Several times a week he has a "tingling sensation" with a mood change where he will suddenly smile or frown. PT has an appointment with Dr. Tobar in outpatient behavioral health on 06SEP16.~ ~PT reported having passive SI since he was a child. He reported 2 prior suicide attempts when he was in high school: one by overdosing on OTC medicine and one by overdosing on alcohol. His last plan was to overdose on helium before self-referring to substance abuse treatment last year.		

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

SSN: ***-**-****

DoD ID: 1286180538

Created: 13 Nov 2017

He last had passive SI("why even bother") 3 weeks ago, with no plans or intent. PT denied any current SI, plans, or intent. ~ ~Duration of Problem: PT has experienced symptoms since his first ship tour in 2006. Symptoms have worsened since he re-enlisted last October.~ ~Factors correlated with onset: Anxiety started after PT joined the Navy in 2006. He regrets re-enlisting last October, and because he waited so long to re-enlist he had last pick for orders. Subsequently he was stationed in the same same environment with the same work stress.~ ~Frequency of symptoms: Symptoms occur every day.~ ~Severity of symptoms: Depression symptoms from PHQ-9 are in the mild range. Anxiety symptoms from GAD-7 are in the moderate range.~ ~Psychosocial factors: Occupational stress and minimal social support.~ ~Aggravating/alleviating factors: Aggravating factors include occupational stress and feeling disconnected from others. Alleviating factors include cooking and programming.~ ~Current tx: None~ ~Past tx: PT began behavioral health treatment in 2012. ~ ~Functional impact: Symptoms negatively impact PT's functioning at home and work.~.....

Paternal history of preliminary background HPI [use for free text] on 25 Aug 2016

A/P Written by SPEVAK,CHRISTOHER J @ 08 Nov 2017 1027 EST

1. Alcohol dependence, uncomplicated: S: The SM participated in a weekly group discussion about medical perspectives on substance use disorders. Topics of this group range from the history of substance use, psychoeducation on substance use disorders, recent medical advances in understanding substance use disorders and treatments. Participants were also encouraged to discuss their own personal perspectives on the topics discussed.

O: SM arrived on time for group and was dressed appropriately for the setting. The SM was oriented x3

Appearance: neat and clean Behavior: Appropriate, engaged in group

Speech: WNL Thoughts: WNL

Mood: Good Affect: Congruent

Insight: Fair Judgment: Fair

SI/HI/AVH: None Reported Med/Pain Issues: None Reported

A: SM actively participated in group. Participants were respectful of each other's perspectives and exhibited understanding of the topic as evidenced by group discussions. Participants were encouraged to ask questions and were answered accordingly.

P: Next medical group to will continue to build upon the topics already discussed and explore new approaches to treatment. Participants will follow up with their primary psychiatric/medical providers with any specific concerns about their personalized treatment plans.

Presenting Problem:

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated

that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used:** CBT**Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. He stated that he missed his last appointment due to complications with GI issues. Patient reported that he is feeling less depressed this week. He attributes this to positive interactions with dating partner and developing new interests. Patient stated that he and his dating partner have been spending a lot of time together and she plans to move in with him. Therapist and patient discussed impulsive decision making but patient feels that this is a positive thought out direction forward. He stated that it helps him socialize and is a source of emotional support. Patient expressed interest in gardening and identified wanting to develop a hydroponic system for growing plants indoors. Patient has also been pursuing treatment with medical marijuana for anxiety and GI issues.

Response to treatment: [] None [**X**] Some [] Significant [] Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No suicidal/homicidal thought/intent/plan reported.

Harm to Others: **(X) Not Elevated** () Low () Intermediate () High

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: **(X) Outpatient** () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 27 September 2017

Reviewed with patient on: 27 September 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress: Patient does not report any suicidal ideation.

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors. He reports less depressive symptoms.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would **NOT** like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications

S/O Note Written by DAVIS, KRISTEN KATHLEEN @ 08 Nov 2017 1418 EST**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Process Group (0730-0845)

S: Topics discussed: Introductions; differences between military branches, communities and commands; the impact of alcohol use on stress. SM discussed with other group members the differences between their commands and feelings of frustration regarding administrative procedures. SM shared in detail what brought him to ATS this time and the first time. SM acknowledged that his alcohol use contributed to the work stress he experienced prior to entering treatment. The session ended with group members sharing their plans for the holiday weekend and if they had concerns to present to the group. SM stated that he is having friends over this weekend and identified grilling as one of his triggers. He reported that his house is dry and that his girlfriend is no longer drinking.

O: SM arrived late to group. SM was oriented x3.

Appearance: Appropriate Behavior: Appropriate

Speech: WNL

Thoughts: WNL

Mood: Stable

Affect: Congruent

Insight: Good

Judgment: Good

SI/HI: None Current

Med/Pain Issues: None expressed

A: SM is sharing openly and honestly with the group. SM provides appropriate feedback and appears committed to his recovery.

P: SM will continue with group as assigned.

S/O Note Written by HANGEMANOLE, DESPINA C @ 09 Nov 2017 0834 EST**History of present illness**

S/O Note Written by HANGEMANOLE, DESPINA C @ 06 Nov 2017 1352 EST**History of present illness**

The Patient is a 32 year old male.

Focus Of Session: Judgement & Fellowship

S) SM stated he had been thinking about a gardening invention and planned to spend some time working on this in the future. SM stated he has found himself being more productive and distracted by healthy hobbies recently. SM reported that he doesn't feel he's getting as much out of IOP due to the redundancy. SM and this writer discussed ways to reframe this thought as to stay as engaged as possible. SM acknowledged that redundancy is necessary for learning and that something was missing from his first effort at recovery which is why he was unable to sustain it. SM identified that missing piece as support and stated that he now has support from his family, girlfriend and a couple friends. SM reported that he was unsure as to why sober support specifically is important in recovery but agreed to think about it and have some thoughts to discuss next session. SM denied any alcohol use or thoughts about drinking. SM denied SI/HI.

O) SM reported to session on time and was dressed casually. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.

A) SM is thoughtful when discussing his support system and relationships. SM demonstrates a lack of knowledge of parts of recovery as evidenced by his inability to identify why sober support is necessary in recovery, however, SM demonstrates good judgement in offering to brainstorm on this for homework.

Alcohol Use D/O, Severe

P) SM will follow up with social worker next week. SM will begin continue with ATS groups as scheduled.

A/P Written by HANGEMANOLE, DESPINA C @ 06 Nov 2017 1340 EST**1. Alcohol dependence, uncomplicated**

Procedure(s): -Psychiatric Therapy Individual Approximately 60 Minutes x 1

Disposition Written by HANGEMANOLE, DESPINA C @ 06 Nov 2017 1342 EST**Released w/o Limitations**

Follow up: as needed in the ATS ADULT BE clinic. - Comments: SM will f/u with social worker next week. 60 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

S/O Note Written by BURTON, CARA N @ 06 Nov 2017 1021 EST**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Morning Process Group (0730-0845):

S: Today's session was begun by completing introductions as there were two new group members beginning the IOP Program today. Each group member took turns sharing their names, military history as well as what led to their engagement in substance abuse treatment. Additional time was spent discussing attendance at meetings, including both AA and SMART Recovery. Group members also spent some time sharing how their mental health symptoms (such as PTSD, depression and anxiety) have increased in early sobriety. Group members engaged easily with one another and appeared to relate well and share spontaneously throughout the session. This SM shared openly about his titration off his medicine and also shared about potential triggers with drinking. He was actively engaged throughout the session.

O: SM arrived on time for group and was oriented x3.

Appearance: Neat, clean, dressed appropriately to season in civilian clothing

Behavior: Appropriate, engaged, talkative

Speech: WNL

Thoughts: WNL

Mood: Euthymic, stable

Affect: Congruent

Insight: Fair

Judgment: Fair

SI/Hi: None reported

Med/Pain Issues: None expressed

A: SM is engaged during sessions and can sometimes go off topic for some time but is easily redirected. He appears motivated to maintain abstinence.

P: SM will continue with IOP groups as scheduled.

S/O Note Written by LESKO, STACEY BETH @ 07 Nov 2017 0731 EST**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Risky Drinking Group: 1115-1200

S: The group reviewed the concept of risky drinking and what constitutes 'low risk' drinking vs. 'high risk' drinking. Group members watched the second part of HBO's documentary 'Risky Drinking' that highlighted a man's struggle with excessive drinking and the impact on his family and overall wellbeing. Group members discussed what they viewed in relation to the consequences of high-risk drinking and related it to their own life experiences.

O: SM arrived on time for group. SM was oriented x3.

Appearance: Appropriate Behavior: Appropriate

Speech: WNL

Thoughts: WNL

Mood: Euthymic

Affect: Congruent

Insight: Good

Judgment: Good

SI/Hi: None Current

Med/Pain Issues: None expressed

A: SM actively engaged in discussion and provided and received feedback appropriately.

P: SM will continue with IOP as planned.

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 13 Nov 2017

He reported: Encounter Background Information: Seeking Safety Group
Group 1000-1115:

S: SM actively participated in the seeking safety group. SM reviewed coping skills, and commitments made at the previous group session. SM denies substance use or any unsafe behavior since the last group session. Today's group topic was focused identifying healthy and unhealthy relationship beliefs and learning how to cultivate a healthy relationship. The group members reviewed the relationship beliefs listed in the handout and discussed the ones that they could relate to. SM reports poor communication skills in the past. SM states that he never took time to understand situations and make better decisions. SM states that this affected his relationship with his roommate. SM reports effort to improve communication skills and healthy relationship. The group discussed how to change some of the unhealthy belief to improve their relationship and fortify their recovery. At the end of the group session, the group members were asked to fill out a commitment sheet: good coping skills and a commitment they will complete before the next group session.

O: Group member reported on time. SM was interactive in the group.

Behavior: Appropriate

Psychosis: None evident

Speech: WNL

Thoughts: Clear, organized

Mood: Positive

Affect: Congruent

SI/HI: None expressed

Pain: None indicated

A: SM appeared open to the training environment and attempted to execute commands. No evidence of SI/HI.P.

History of present illness

The Patient is a 32 year old male.

Relapse Prevention Group~Focus of Session: Managing Stress

S) SM participated in the group discussion about stress, coping with stress, and how stress can impact physical/psychological health and decision making. We discussed the idea of having a "background" stress level and how to decrease it. SM talked about past experiences with meditation and how it has helped. We discussed how by making a consistent effort we can improve our stress levels so that we are less likely to experience difficult events as a crisis.~O) Appearance: uniform Behavior: Appropriate

Speech: WNL

Thoughts: WNL

Mood: fair

Affect: Congruent

Insight: Fair/good

Judgment: fair/good

SI/HI: None Current

Med/Pain Issues: None

A) SM seems invested in the group at this time.

P) Next relapse prevention group will discuss effective communication

Recreational Therapy

Recreational Therapy Program

Name: Anderson, Daniel P02

Date: 02 Nov 2017

Time: 97537 x 30 MIN

Place: Occupational Therapy Clinic

Intervention: Recreational Therapy Initial assessment

Diagnosis: MDD

Pain: SM reports 4/10 in intestinal/stomach due to IBS

Fall Risk: no

Education/ Counseling: Patient educated on sports and recreation adaptive equipment, techniques and resources pre and post rehabilitation.

Referring Provider: Dr. Paul

Provisional Diagnosis: Major depressive disorder, recurrent, moderate

Reason for Request: Patient would benefit from additional coping skills and building positive monitored socialization skills

Phone: [REDACTED]
Email: [REDACTED]@gmail.com
Branch / Rank: Navy/ P02

SM arrives on time, groomed well and presents in a pleasant mood.

SM discusses current stressors and strategies he is using for managing himself. SM declines Recreational Therapy services at this time due to the stress of travel and trying to implement lifestyle changes on his own. SM was provided with community recommendations and mindfulness app to try on his phone. SM appreciated resources and has Rec Therapist contact information if needing services in the future.

PLAN:

1. Patient will not receive Recreational Therapy services at this time.

Notes from current session:

Patient presents for follow-up appt. We last met five weeks ago, at which time we initiated a cross-taper of Effexor xr 225 mg po qam to Cymbalta 60 mg po daily as pt didn't think Effexor was helpful and GI had suggested he try Cymbalta to also help his IBS instead. Two weeks ago pt called this provider and stated he was having withdrawal symptoms from coming off of Effexor after taper so we restarted Effexor xr 37.5 mg po qam. Today pt states the withdrawal brain zaps went away after he resumed the 37.5 mg daily but he started taking it every other day on 29OCT and the zaps have returned. He doesn't think Cymbalta 60 mg has been helpful, though he continues to take it. He had TMS and completed his course of treatment with it at IOP. HE is not sure if it was helpful. Reviewed phq9 and gad7 scores which are virtually unchanged from last visit. HE does think he is feeling a little better since starting a romantic relationship with a woman about 10 years older than him who has a 16 year old daughter. He finds spending time with them enjoyable and helps his mood. He has not drank since we last met and hasnot been taking naltrexone. He denies cravings. HE tried hydroxyzine 10 mg prn anxiety and didn't find it helpful for acute anxiety. He denies suicidal thoughts.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembruzska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Risk Assessment:**C-SSRS Baseline** (9/6/2016): 5 - Lifetime thoughts of suicide with plan or actual behavior endorsed.

Over lifetime, Wish to be Dead? Yes

Over lifetime, Suicidal Thoughts? Yes

Over lifetime, Suicidal Thoughts with Method? Yes

Over lifetime, Suicidal Intent? Yes

Over lifetime, Suicide Intent with Specific Plan? Yes

Over lifetime, Suicide Behavior? Yes Number of events: 3

Most recent Suicidal Thoughts/Behaviors? 1-3 months ago

Suicidal Thoughts Duration? Less than 1 hour

Suicidal Thought Frequency? Less than once a week

C-SSRS Current: not taken**RISK FACTORS (Weaknesses):** (also see patient reported issues above in vitals)☒ Male ☐ History of family/friend suicide☐ Chronic medical conditions ☒ Impulsivity☒ History of abuse ☐ Chronic pain**PROTECTIVE FACTORS (Strengths):**☐ Married, children ☒ Active treatment engagement☐ Good coping/problem solving skills ☒ Hopefulness present

BASELINE PAIN CONTROL 1 Active 28 Apr 2017@0001

Past Behavioral Health History:

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt

states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his 'uncle's son' when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure

Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)

Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None

Patient denies treatment team needs to be aware of specific ethnic/cultural issues.

Learns best by: Pictures. Learning is adversely affected by: None.

Patient would not like family members involved in care.

Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Mental Status Exam:

Appearance: Neatly groomed in casual clothing.

Behavior/Orientation: Polite, and cooperative.

Abnormal Movements:normal gait. No abnormal movements apparent.

Rapport:fair

Speech:talkative

Mood:dysphoric

Affect:full

Thought Process: circumstantial

Thought Content: denies current suicidal intent/HI/AVH

Judgment: fair

Insight:fair

Impulsivity: none at time of interview

Cognition:grossly intact

Fund of Knowledge:wnl

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High

Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.

☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

SSN: ***-**-****

DoD ID: 1286180538

Created: 13 Nov 2017

Goal:pt will experience decrease in anxiety and improvement in mood

Objective: pt will continue medication

Interventions: Stop taking Effexor XR 37.5 mg po qam. Continue Cymbalta 60 mg daily. Consider taper off at next visit if it still is not helpful. May increase hydroxyzine to 20 mg po daily prn anxiety since he has not tried this dose yet, though I told him he could .

Measure:gad7, pcl, phq9

Problem #2: safety

Goal:pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm-met

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal:pt will abstain from drinking

Objective: pt will refrain from alcohol use

Intervention: discontinue naltrexone 50 mg po daily, which he has already stopped taking a month ago.

Normal b12 panel drawn after July 2017 visit. He continues with ATS.

Measure:self-report, lab results

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

[] good insight/judgment, [x] a desire to resolve their disorder, [x] verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of medication plan with patient who stated understanding and agreement with plan.

Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Follow-up: one month

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

A/P Written by TOBAR,EDEN @ 02 Nov 2017 1011 EST

1. **Generalized anxiety disorder:** Med management 25 minutes; supportive therapy 25 minutes

Procedure(s): -Psych Ther Indiv Approx 30 Min W/ Medical Evaluation & Management x 1

Disposition Written by TOBAR,EDEN @ 02 Nov 2017 1011 EST

Released w/o Limitations

Follow up: 1 month(s) or sooner if there are problems.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding.

Note Written by TOBAR,EDEN @ 01 Nov 2017 1359 EST

A/P Written by SPEVAK,CHRISTOHER J @ 01 Nov 2017 1116 EST

1. Alcohol dependence, uncomplicated: S: The SM participated in a weekly group discussion about medical perspectives on substance use disorders. Topics of this group range from the history of substance use, psychoeducation on substance use disorders, recent medical advances in understanding substance use disorders and treatments. Participants were also encouraged to discuss their own personal perspectives on the topics discussed.

O: SM arrived on time for group and was dressed appropriately for the setting. The SM was oriented x3

Appearance: neat and clean Behavior: Appropriate, engaged in group

Speech: WNL Thoughts: WNL

Mood: Good Affect: Congruent

Insight: Fair Judgment: Fair

SI/HI/AVH: None Reported Med/Pain Issues: None Reported

A: SM actively participated in group. Participants were respectful of each other's perspectives and exhibited understanding of the topic as evidenced by group discussions. Participants were encouraged to ask questions and were answered accordingly.

P: Next medical group to will continue to build upon the topics already discussed and explore new approaches to treatment. Participants will follow up with their primary psychiatric/medical providers with any specific concerns about their personalized treatment plans.

S/O Note Written by DAVIS,KRISTEN KATHLEEN @ 03 Nov 2017 0756 EST**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Process Group (0730-0845)

S: Topics discussed: Introductions, recovery programs and goals for recovery. Group members discussed the different aspects of their recovery programs, if they are currently being developed or goals they have regarding recovery. SM arrived late to group and stated it was because of health reasons. SM was engaged in the group for the remainder of the session, offering constructive feedback to other group members. SM stated that right now in his recovery process, he is looking to deepen his relationships and is working to prevent opportunities of isolation.

O: SM arrived 30 minutes late for group. SM was oriented x3.

Appearance: Appropriate Behavior: Appropriate

Speech: WNL

Thoughts: WNL

Mood: Stable

Affect: Congruent

Insight: Good

Judgment: Good

SI/HI: None Current

Med/Pain Issues: None expressed

A: SM arrived late for group and was engaged in the group for the remainder of the session. SM is sharing openly and honestly with the group. SM gives appropriate feedback and appears dedicated to his recovery.

P: SM will continue with group as assigned.

S/O Note Written by HANGEMANOLE,DESPINA C @ 03 Nov 2017 0844 EST**History of present illness**

The Patient is a 32 year old male.

Educational Group: Finding Meaning 1000-1045

Focus of Session: Defining Spirituality~S: The group discussed what spirituality means to them. SM explored basic issues of spirituality and how addiction affects spirituality. He shared that his definition of spirituality are similar to military values such as honesty and integrity. SM explored the practical applications of spirituality and acknowledged that practicing spirituality may be beneficial for recovery.

O: SM arrived on time for group.

Appearance: Clean

Behavior: Appropriate

Speech: WNL

Thoughts: Logical

Mood: Stable

Affect: Congruent

Insight: Good

Judgment: Good

SI/HI: None

Med/Pain Issues: None~A: SM interacted effectively with the group. SM gave and accepted feedback positively. SM demonstrates commitment to recovery.~P: SM will attend next group as scheduled.

:

VENDOR BP GAMMA

You have been diagnosed with obstructive sleep apnea (OSA). Treating your OSA with continuous positive airway pressure (CPAP) will improve your quality of sleep. You will need to combine the use of your CPAP with at least 7-8 of sleep 7 nights a week.

Treating your sleep apnea will improve: Memory, blood pressure, blood sugar, mood, daytime sleepiness, heartburn and erectile dysfunction.

1. How to get your CPAP machine

1. Your provider has placed a DME order (Durable Medical Equipment) for a CPAP and supplies.
2. In 3 business days BP GAMMA, your DME Vendor, will contact you. If they have not contacted you, you can call **their office at 301 874 3390 or 1 800 624 4134 to confirm that this CPAP order was approved and to coordinate pick up and/or delivery of this device.** The Walter Reed CPAP Concierge office (301 400 1412) will fax over needed paper work.
3. Once you have a confirmed date for pick up, contact the clinic to schedule an appointment for a CPAP start up class.

1. CPAP START UP CLASS

A 2-3 hour group session held once a week where will receive education on your new diagnosis of sleep apnea and go over general information about CPAP while addressing issues you may have encountered. We encourage you to bring your CPAP machine to class.

To schedule this appt: Call 301 400 1412 or contact us via our website: Internet search >Sleep Disorder Walter Reed> Contact Sleep Medicine Staff located on the right side of webpage> Enter your contact info> Type of appointment CPAP START UP”.

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

SSN: ***-**-

DoD ID: 1286180538

Created: 13 Nov 2017

Begin using your CPAP a few days before this scheduled class.

The use of a sleep aid, such as Ambien (zolpidem) or Lunesta (eszopiclone), is usually recommended for the first two weeks of CPAP use. It is recommended that you treat any nasal congestion. If you have chronic nasal congestion from allergies, use Flonase (fluticasone nasal spray). If you have acute nasal congestion from a cold, over the counter Afrin (oxymetazoline nasal spray) for a few night can be helpful.

2. Schedule follow-up

After the CPAP start up class, you will be scheduled into a CPAP follow appointment to evaluate CPAP data after 4-6 weeks of use.

*If you will **NOT** be attending this class, we recommend you call 301 295 6289 and schedule a CPAP follow up with CPAP follow up provider.*

Other important information:

- Bring you CPAP data card to all CPAP appointments.
- CPAP therapy is recommended as a lifetime treatment unless otherwise changed by your sleep provider.
- An annual follow up is recommended to renew CPAP supplies for all patients.

Note Written by HANGEMANOLE, DESPINA C @ 31 Oct 2017 1204 EDT**Focus Of Session: Work Stress/Risky Behaviors**

S) SM stated that he completed TAPS last week and continues to experience stress related to work. SM stated he is experiencing conflict with his chain of command as they are requiring that he drive back and forth between WR and Ft. Meade between appointments. SM stated that he hopes to get transferred to WR to eliminate this stress. SM reported that he has been diagnosed with sleep apnea, which is relieving for him as he has been struggling with sleep issues for years. SM reported that he has moved in with his girlfriend of a few months, who also has an alcohol problem. SM described his relationship as supportive and stated that they have already agreed on a plan if their relationship doesn't work out. SM reported that she has self identified an alcohol problem but has been abstinent from alcohol for an extended time and plans to continue abstinence. SM reported an increased in anxiety related to work stress but a decrease in depressive symptoms since dating this person. SM reported that once IOP is over he will begin taking leave as to avoid having to be at work during his MEB process. SM stated that he will be speaking with a GI provider regarding possibly starting Marinol. SM acknowledged the risks of relapse and cross addiction. SM stated that he continues to have flare ups and nothing he has tried so far has worked to alleviate his discomfort. SM reported his pain as a 4/10 from his IBS. SM reported he attended one AA meeting this week and plans to return to Smart Recovery meetings now that he is back in the Glen Burnie area. SM denied any alcohol use or thoughts about drinking. SM denied SI/HI.

O) SM reported to session on time and was dressed in uniform. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.

A) SM is thoughtful when discussing his support system and relationships. SM demonstrates good judgement by attending all appointments and participating appropriately. SM lacks insight in some of his decisions around his relationship and his IBS treatment. SM will be at greater risk of relapse if he begins taking Marinol, and given that SM was unable to sustain sobriety after his last treatment this appears to be high risk behavior.

Alcohol Use D/O, Severe

P) SM will follow up with social worker next week. SM will begin continue with ATS groups as scheduled.

A/P Last Updated by HANGEMANOLE, DESPINA C @ 30 Oct 2017 1357 EDT**1. Alcohol dependence, uncomplicated**

S/O Note Written by FOBIZSHI, MACANGELO M @ 31 Oct 2017 0628 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Seeking Safety Group

Group 1000-1115:

S: SM actively participated in the seeking safety group. SM reviewed coping skills, and commitments made at the previous group session. SM denies substance use or any unsafe behavior since the last group session.

Today's group topic was "signs of danger versus safety". The group session was focused identifying red flags during their recovery process, as well as, green flags that will further their recovery. The group members selected both red and green flags from the handout that they could relate to. The provider asked the group members to create a safety plan for the red flags they selected. At the end of the group session, the group members were asked to fill out a commitment sheet: good coping skills and a commitment they will complete before the next group session.

O: Group member reported on time. SM was interactive in the group.

Behavior: Appropriate

Psychosis: None evident

Speech: WNL

Thoughts: Clear, organized

Mood: Positive

Affect: Congruent

SI/HI: None expressed

Pain: None indicated

A: SM appeared open to the training environment and attempted to execute commands. No evidence of SI/HI.P.

S/O Note Written by HANGEMANOLE, DESPINA C @ 31 Oct 2017 0712 EDT**History of present illness**

The Patient is a 32 year old male.

S: The group discussed drinking history and meetings. SM introduced himself to the group stating that he has finally been diagnosed with sleep apnea, after years of having sleep problems. SM gave a brief but detailed history of his alcohol use over his lifetime, sharing that his alcohol use became out of control when he moved to the area a few years ago secondary to depression and anxiety. SM discussed his MEB starting, and the some of the decisions he's made regarding his career thus far. SM reported that he enjoys SMART recovery meetings more than AA meetings but does relate to the 12 Step philosophy as a whole. ~O: SM arrived on time for group. SM was oriented x3. ~Appearance: Appropriate Behavior: Appropriate

Speech: WNL

Thoughts: WNL

Mood: Euthymic

Affect: Congruent

Insight: Fair

Judgment: Good

SI/HI: None Current

Med/Pain Issues: None expressed ~A: SM is sharing openly and honestly with the group. SM gave appropriate feedback and asked thoughtful questions of other group members. SM is open to community recovery, though it is not clear why SM does not enjoy AA meetings. ~P: SM will continue with IOP groups as scheduled.

8901 Rockville Pike

Bethesda, MD 20889

Phone: 301-295-4547 Fax: 301-319-8197

Patient Name: Anderson, Daniel

SSN: [REDACTED]

Study Date: 10/4/2017

Scorer: L. Davis, RPSGT

Referring Provider: Dr. Khramtsov

POLYSOMNOGRAM REPORT**Technical Description:**

Physiologic data were collected using a computerized Sensormedics polygraph interfaced with Somnostar Z4 amplifiers. The recording montage consisted of central, frontal and occipital EEG, EOG, chin EMG, thermocouple and pressure transducer airflow, chest and diaphragmatic movement, combined leg EMG, tracheal sounds and pulse oximetry. The patient was monitored throughout the study via infrared CCTV and recorded for review. Respiratory events and limb movements were scored according to *The AASM Manual for the Scoring of Sleep and Associated Events, Version 2.3*.

Polysomnographic Data:

The patient took 3mgs Eszopiclone prior to the study. The study duration was 419.5 minutes. The recorded total sleep time was 367.5 minutes with a sleep efficiency of 87.6%. The patient's latency to sleep was 16.5 minutes. The REM latency was 174.5 minutes. Sleep stage distribution revealed 12.9% Stage N1, 58.1% Stage N2, 16.1% Stage N3, 12.9% Stage REM and wake after sleep onset was 35 minutes. There were 100 arousals and 0 awakenings resulting in a total arousal index (TAI) of 16.3/hour of sleep.

There were 0 apneas (0 obstructive, 0 centrals, 0 mixed) and 37 hypopneas with **an apnea hypopnea index(AHI) of 6./hour**. The apnea hypopnea index during supine sleep(88 minutes) was 19/hour and 2/hour during non-supine sleep(280 minutes). The hypopnea index was 6./hour. The Central apnea index was 0/hour. Hypopneas were scored using nasal pressure signal drop by at least 30% followed by arousal or 3% oxygen desaturation..

Oxygen saturation was normal at baseline. Oxygen saturation remained between 86% and 97% with mean value of 95% throughout the study. During the study the oxygen saturation was below 90% for 1 percent of the total sleep time. The average heart rate was 73 beats per minute. There were 0 PLMS and

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 13 Nov 2017

0 PLMS with arousals with a PLMS index of 0/hour and a PLMS arousal index of 0/hour.

Medical Interpretation:

The patient underwent a Diagnostic PSG: Epworth Sleepiness Scale was 20/24. Sleep efficiency was good and there was adequate total sleep time to establish a diagnosis. Sleep architecture was disrupted. The patient had an AHI consistent with mild sleep apnea. The EKG did not demonstrate arrhythmias.

Diagnosis:

1. Obstructive Sleep Apnea(G47.33)

Suggestions for Clinical Care:

1. AutoPAP titration with pressures of 6-15 cm H2O and close clinical follow up.
2. Recommend sleeping in the lateral position, obtaining 7-8 hours of sleep per night, avoid of alcohol or other sedatives and maintaining an ideal body weight as these can improve sleep quality.
3. The patient should be counseled- as is done with all patients directly seen at this SDC- not to engage in any hazardous activities (such as driving) if excessively sleepy. Such sleepiness is to be reported to their physicians for further evaluation and treatment.

TMS

S/O Note Written by BRAGGS, DEBORAH C @ 20 Oct 2017 1239 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #13 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20.10 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 13 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and after discussion with the team, it was decided today will be SM last TMS appointment, as SM will be away on training for some time. ZUNG depression = 45, PHQ 9 = 13.

S/O Note Written by LANDE, RAYMOND G. @ 20 Oct 2017 1245 EDT

Reason for Visit

Visit for: Attending Note: A procedural time out was done during which settings and patient was re-identified.

45 minutes

Purpose of visit was for session of Transcranial Magnetic Stimulation. SM is receiving treatment for depression.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS without evidence of distress. Confirmed that there was no metal above the neck. Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes. WRNMMC PAO with SM's permission in room.

Objective

Plan: SM next session scheduled.

S/O Note Written by FOBIZSHI, MACANGELO M @ 23 Oct 2017 0621 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Encounter Background Information: Creative Art Therapy Group Group 1115 - 1200:

S: SM actively participated in the Creative Art Therapy Group. The group activity was poetry. The instructor explained how poetry could be used as a platform to express emotions and thoughts. The instructor asked the group to write a poem or free writing, to express their thoughts and emotions. The group members shared their individual art and how they felt after expressing those emotions in writing.

O: Group member reported on time. SM was interactive in the group.

Behavior: Appropriate

Psychosis: None evident

Speech: WNL

Thoughts: Clear, organized

Mood: Positive

Affect: Congruent

SI/HI: None expressed

Pain: None indicated

A: SM appeared open to the training environment and attempted to execute commands. No evidence of SI/HI.P: SM will continue group next week.

S/O Note Written by HARDIN, JAMES G @ 25 Oct 2017 1015 EDT**History of present illness**

The Patient is a 32 year old male.

Process group: 0730-0845

Focus of Session: weekend planning, role of sponsors

S) The group discussed their plans for the weekend and the need to keep their time structured. We talked about the dangers of boredom and too much free time. Members talked about their relationships with others in the self-help community and the role of sponsors. SM fully participated in the discussion.

O) Appearance: normal

Behavior: Appropriate

Speech: WNL

Thoughts: WNL

Mood: calm

Affect: consistent

Insight: fair

Judgment: fair

SI/HI: None Current

Med/Pain Issues: None

A) SM was invested in group today.

P) Next process group will be same time Monday.

Note Written by DELEON, PATRICK D. @ 25 Oct 2017 1042 EDT

(Added after encounter was signed.)

S: Intensive Outpatient Program Seeking Safety group, topic "Honesty." Time 1000-1100. Discussion of the role of honesty in recovery, ways in which honesty gets impacted in active substance abuse, and situations which make honesty more difficult. Particular discussion of honesty with children and with therapists, and both the difficulties and benefits of open direct communication when emotions are high. SM actively engaged in group discussion, processed difficulties with AA, spoke about feeling judged and that things get oversimplified in AA. Peers and this SW acknowledging 'absolute' talk in AA while also reframing that as having basic principles which are helpful in time of crisis, and that can be explored more fully and individually in treatment and/or with sponsor.~

O: Client arrived on time to session. Alert and oriented x 3.~

Appearance: Appropriate~

Behavior: Appropriate~

Speech: Within Normal Limits~

Thoughts: Logical, linear, goal-directed~

Mood: Depressed~

Affect: Congruent~

Insight: Fair~

Judgment: Fair~

SI/HI: None reported~

Med/Pain Issues: Irritable Bowel Syndrome~

A: SM active participant in group, open to feedback~

P: Continue in Intensive Outpatient Program, next Seeking Safety group 23 Oct

S/O Note Written by BRAGGS, DEBORAH C @ 19 Oct 2017 1223 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #12 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20.09 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 12 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

S/O Note Written by BAHROO, BHAGWAN A @ 19 Oct 2017 1318 EDT

Reason for Visit

Visit for: Transcranial magnetic Stimulation for Depression (12:35-13:20).

Subjective

Attending Note: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 22/ # 12 at 120% MT.

Amended Report Text:

ADDITIONAL HISTORY: CT examination with right-sided colonic thickening and equalization of small bowel. Recent colonoscopy and without lesion the terminal ileum a concern stenosis or inflammation of the distal ileum.

TECHNIQUE: Standard MR enterocleisis protocol; Three plane localizer, coronal FIESTA, axial T2 SS FSE, axial and coronal T2 SS FSE, axial and coronal FIESTA fat sat, axial SPGR in and out of phase, axial and coronal LAVA pre-and postcontrast MRI of the abdomen.

COMPARISONS: CT abdomen/pelvis 10/11/12

FINDINGS:

Bowel loops are adequately distended without focal stenosis, stricturing, or luminal narrowing. There is normal bowel peristalsis and motion observed on the cinematic images. Minimal mural thickening of the mid jejunum observed at the left upper quadrant without corresponding abnormal mucosal enhancement, stricturing or stenosis.

The liver and gallbladder are normal without intra-or extrahepatic biliary ductal dilatation. The spleen, pancreas, adrenals, and kidneys are normal.

No intra-abdominal mass or fluid collection. No enlarged abdominal or pelvic lymph nodes.

Osseous marrow signal is nonpathologic.

IMPRESSION:

No abnormal areas of enhancement or mural thickening within the gastrointestinal system, specifically evidence of active inflammation at the site of previously observed colitis on CT examination 10/11/12. Correlate with patient's symptomatology.

TMS

S/O Note Written by BRAGGS, DEBORAH C @ 16 Oct 2017 1150 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #11 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20.10 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 11 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for Thursday.

S/O Note Written by LANDE, RAYMOND G. @ 16 Oct 2017 1249 EDT

Reason for Visit

Visit for: Attending Note: A procedural time out was done during which settings and patient was re-identified.

45 minutes

Purpose of visit was for another session of Transcranial Magnetic Stimulation for depression.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS without evidence of significant distress. Confirmed that there was no metal above the neck. Treatment administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Objective

Plan: SM scheduled for next session.

Received call from pt stating he has been on cymbalta 60 mg for five days after stopping effexor xr 75 mg every morning as per our taper plan prior to that. Pt states the day before his call, he began experiencing brain zaps, was finding it hard to concentrate, and has felt nausea for the two days prior to his call. He finds it hard to focus on driving. He asks what he can do about his effexor withdrawal and about being put on quarters. He is currently attending ATS IOP. Returned pt's call. We discussed adding back effexor xr 37.5 mg po qam to counteract his effexor withdrawal. Discussed taking it in the morning and his cymbalta at night to minimize drug interaction and potential for serotonin syndrome. Also prescribed hydroxyzine 10 mg, up to two tabs daily for agitation/nausea. Agreed to leave quarters slip at front desk for him to pick up, putting him on quarters until the morning of 18OCT. He has follow up with this provider the week of Oct 30th as he is in transition class next week.

The Patient is a 32 year old male.

SM asked to speak with this writer as he is feeling 'out of it' due to withdrawal from his psychotropic medication Effexor. SM reported having 'brain zaps' in which he forgets his train of thought and has difficulty communicating. SM stated he's having trouble focusing in group. SM stated he is also feeling stressed regarding the pressures his command is putting on him at work. SM shared that he will ask his PCM for updated limdu paperwork to specify that he cannot be on watch and should not be driving back and forth from WR to Ft. Meade unless he has adequate time to do so. SM stated he would call Dr. Tobar for guidance. SM reported he spoke with Dr. Tobar and she put him on 48 hours SIQ and is re-prescribing a low dose of Effexor. SM stated he will attend TMS appointments and his PCM appointment tomorrow but would otherwise not be at appointments until Wednesday. SM appeared anxious and presented as tearful. SM will reschedule individual appointment for Wednesday.

A/P Written by HANGEMANOLE, DESPINA C @ 16 Oct 2017 1109 EDT**1. Alcohol dependence, uncomplicated**

Procedure(s): -Psychiatric Therapy Individual Approximately 30 Minutes x 1

Disposition Written by HANGEMANOLE, DESPINA C @ 16 Oct 2017 1109 EDT**Released w/o Limitations**

Follow up: as needed in the ATS ADULT BE clinic. - Comments: SM will report for groups on Wednesday and reschedule individual appointments.

30 minutes face-to-face/floor time. >50% of appointment time spent counseling and/or coordinating care.

S/O Note Written by HANGEMANOLE, DESPINA C @ 16 Oct 2017 1113 EDT**History of present illness**

The Patient is a 32 year old male.

S: The group discussed addictive behaviors, meetings and relationship with command. SM reported that he does not interact as regularly with his command as many others in group but mostly does not get adverse reactions from them about his need for treatment. SM stated that he could understand how many in leadership may not understand addiction or the need for treatment just based on their lack of life experience with it. SM reported that he could understand how people may engage in addictive behaviors other than substance abuse and acknowledged that it's likely an outward manifestation of something going on internally with that person. ~O: SM arrived on time for group. SM was oriented x3. ~Appearance: Appropriate Behavior: Appropriate

Speech: WNL

Thoughts: WNL

Mood: Anxious

Affect: Congruent

Insight: Fair

Judgment: Fair

SI/HI: None Current

Med/Pain Issues: None expressed ~A: SM is sharing openly and honestly with the group. SM gives appropriate feedback and appears engaged in group. SM can be tangential but is conscious of this and appears to be actively working to be more concise. ~P: SM will continue with IOP groups as scheduled.

S/O Note Written by FOBIZSHI, MACANGELO M @ 17 Oct 2017 0630 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Seeking Safety Group

Group 1000-1115:

S: SM actively participated in the seeking safety group. SM reviewed coping skills, and commitments made at the previous group session. SM denies substance use or any unsafe behavior since the last group session. The group topic was "Safety". The group focused on learning healthy safe coping skills. The group members identified safe and unsafe coping skills they have been using. The provider explained the three stages of healing from PTSD and substance abuse; safety, mourning and reconnection. The group members discussed what safety means to them and the signs of recovery. The group reviewed the examples of safe coping skills in the handout and identified some safe coping skills to practice. At the end of the group session, the group members were asked to fill out a commitment sheet: good coping skills and a commitment they will complete before the next group session.

O: Group member reported on time. SM was interactive in the group.

Behavior: Appropriate

Psychosis: None evident

Speech: WNL

Thoughts: Clear, organized

Mood: Positive

Affect: Congruent

SI/HI: None expressed

Pain: None indicated

A: SM appeared open to the training environment and attempted to execute commands. No evidence of SI/HI. P: SM will continue group next week.

TMS

S/O Note Written by POURZAND, MIRIAM @ 13 Oct 2017 1216 EDT

History of present illness

The Patient is a 32 year old male.

Reason for Visit

Visit for: Transcranial magnetic Stimulation for Depression 45 minute session.

Subjective

TMS Session: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 20/ #10 at 120% MT.

Objective

SM next session scheduled.

.....

S/O Note Written by BLOBERG, BRIAN @ 13 Oct 2017 1232 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre Procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress.

Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #10 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 20.09

Medical Record

The Patient is a 32 year old male.

He reported: Encounter Background Information: Seeking Safety Group

Group 1000-1115:

S: SM actively participated in the seeking safety group. Patient reviewed the "check in" handout at the start of the session. Patient shared all coping skills, and commitments completed since the previous group meeting. Patient denies any alcohol or substance use and any unsafe behaviors since the last group. Today's group today focused on harshness versus compassion. The group reviewed the handout provided by the therapist. The group members reviewed the examples of harsh self-talk and compassionate self-talk in the handout and discussed the ones they related to. The therapist discussed how harshness relates to PTSD and substance abuse. The group collectively talked about how compassion promotes growth and harshness prevents growth. The patient discussed ways to increase compassion in sobriety. At the end of the group session, the group members filled out a commitment sheet to be reviewed at the next group session: good coping skills and a commitment they will complete before the next group session.

O: Group member reported on time. SM was interactive in the group.

Behavior: Appropriate

Psychosis: None evident

Special Clearance: Yes**Presenting Problem:**

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used: CBT****Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. Therapist and patient discussed recent events in his life. Patient continues to endorse significant frustration related to his interactions with his command. Therapist and patient processed his frustration and problem solved potential solutions. Patient stated that he was able to effectively end interaction with a female he was interested in after recognizing that they were not on the same page about what they wanted. Therapist provided positive reinforcement for this as this is different than his previous behavior. Patient also discussed initial interest in a new romantic partner. Patient is working to identify reasonable next steps for his future.

Response to treatment: [] None [**X**] Some [] Significant [] Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

Reason for Appointment: Written by CHELLAPPA, MARY R @ 12 Oct 2017 1204 EDT
TMS**S/O Note** Written by POURZAND, MIRIAM @ 12 Oct 2017 1209 EDT**History of present illness**

The Patient is a 32 year old male.

Reason for Visit

Visit for: Transcranial magnetic Stimulation for Depression 45 minute session.

Subjective

TMS Session: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 13 Nov 2017

per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 19/ #9 at 120% MT.

Objective

SM next session scheduled.

S/O Note Written by BLOBERG,BRIAN @ 12 Oct 2017 1229 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre Procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #9 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 20.09 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS: This is session #9 for depression with MT level at therapeutic treatment level for entire session.

Post procedure: SM monitored briefly. SM had no reports of distress associated with TMS.

PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

S/O Note Written by BURTON,CARA N @ 11 Oct 2017 1217 EDT**History of present illness**

The Patient is a 32 year old male.

He reported: Encounter Background Information: Educational Group: Finding Meaning (1000-1100): Spirituality and Personality
 S: The focus of today's session was the connection between personality and spirituality. Group members were encouraged to assess their personalities during active substance use and at the current point of their recovery. They also reflected on how their personalities have changed since being sober. This SM shared openly about the ways in which substance use allowed him a release from his cares or ongoing frustrations. He engaged actively throughout the session and commented on what others shared appropriately.

O: SM arrived on time for group, was oriented x4 and engaged actively during the group exercises and discussion.

Appearance: Neat, clean, dressed appropriately to season

Behavior: Appropriate, engaged

Speech: WNL

Thoughts: Logical, WNL

Mood: Stable

Affect: Congruent, full range

Insight: Fair

Judgment: Fair

SI/HI: None reported

Med/Pain Issues: None reported

A: SM interacted with group members and facilitators. He demonstrated an understanding of the concepts presented.

P: SM will attend the next group as scheduled.

Note Written by RAGLAND,MARY @ 16 Oct 2017 0952 EDT**Process Group 0730-0845**

S: Topics discussed: Introductions (Name, relationship to the military, substance of choice, sobriety date, and what brought Ct to ATS), Review of Group Rules/Expectations. Demonstrated understanding of Group Rules and assisted in explaining to new group members. Ct again spoke of his father's emotional abandonment of him and it's impact on his emotions--did not connect this to his substance use..

O: Ct arrived over 30 minutes late for group. Ct alert and oriented x 3.

Appearance: Appropriate for weather /situation

Behavior: Appropriate, engaged

Speech: Within Normal Limits

Thoughts: Logical, Linear, Goal-Directed

Mood: Euthymic

Affect: Congruent

Insight: Intact

Reason for Appointment:Written by CHELLAPPA, MARY R @ 10 Oct 2017 1059 EDT
TMSS/O Note Written by POURZAND, MIRIAM @ 10 Oct 2017 1130 EDTHistory of present illness

The Patient is a 32 year old male.

Visit for: Transcranial magnetic Stimulation for Depression (1100-1135).

Subjective

TMS session: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 20.09 minutes.

Adjustments were made to accommodate comfort.

This session number #7 at 120% MT.

Objective

Next session was scheduled.

S/O Note Written by BLOBERG, BRIAN @ 10 Oct 2017 1133 EDTHistory of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre Procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress.

Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #7 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 20.09 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS: This is session #7 for depression with MT level at therapeutic treatment level for entire session.

Post procedure: SM monitored briefly. SM had no reports of distress associated with TMS.

PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

OBJECTIVE

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

SSN: ***-**-****

DoD ID: 1286180538

Created: 13 Nov 2017

Patient was seen today for education, planning and training in prep for participation in Recreational Therapy programs.

ACTION

Patient was educated on application, agenda, safety, and program expectations for participation in upcoming Recreational Therapy programs. SM's homework is to write goals for Recreational therapy and what programs he can use to best practice the skills he is developing/learning. Patient was receptive to education and motivated with TX. Patient is in agreement with plan.

Assessment: Alert and oriented x 4. Presents to be in a pleasant mood although displayed signs of anxiety as evidenced by excessive talking and having scattered thoughts. SM was not able to identify personal goals for post military and has homework to complete prior to next session. SM relates challenges back to his childhood and contradicts self with what does and does not matter to him. SM was educated on what the scope of practice is for Recreational Therapy and how writer is not able to change or help SM with certain areas of his life. During conversation SM requires redirection to answer questions. Learning style- Combined Patient tolerated session well.

Barriers to learning: none

Community Reintegration: **Isolates self in his home, refuses to go to a gym because "it's dirty"**

Leisure Barriers: **social avoidance due to indifference towards others, IBS challenges**

Pending Appointments: 11 Oct 2017

Leisure interests include: cooking, video games, movies, TV shows

Learning Style: combined

Precautions: pain

S/O Note Written by BRAGGS, DEBORAH C @ 05 Oct 2017 1242 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #5 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20.09 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 5 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

S/O Note Written by BAHROO, BHAGWAN A @ 05 Oct 2017 1301 EDT

Reason for Visit

Visit for: Transcranial magnetic Stimulation for Depression (12:05-12:50).

Subjective

Attending Note: A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 15/ #5 at 120% MT.

Objective

Next session was scheduled.

History of present illness

The Patient is a 32 year old male.

<<Note accomplished in the TSWF BH Spec AIM form>>

TMS session: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #4 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20:10 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 4 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

S/O Note Written by HANGEMANOLE, DESPINA C @ 04 Oct 2017 1324 EDT**History of present illness**

The Patient is a 32 year old male.

Focus Of Session: CBT/Work Stress

S) SM reported that he has been feeling bad the last two days due to some stress with his direct supervisor. SM stated that he feels angry but was able to identify feeling disrespected as the main reason for his anger. SM and this writer used CBT techniques to work through the beliefs and emotional consequences of the conflict at work. SM explored how he can use cognitive reframing and expectation adjustment to reduce the stress around this conflict. SM stated that he had forgotten to do his gratitude list for the last couple days until his family reminded him to do it and stated he was happy for the accountability. SM reported group went well and he attended one SMART recovery meeting last week which he enjoyed. SM denied any alcohol use or thoughts about drinking. SM denied being in pain.

O) SM reported to session on time and was dressed in uniform. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.

A) SM was cooperative and friendly. SM appears to be thinking critically about his recovery and is open to feedback. SM seems to be open minded to using concrete techniques to address his depression and anxiety and is reflective and thoughtful in session. Alcohol Use D/O, Severe

P) SM will follow up with social worker in two weeks. SM will begin continue with ATS groups as scheduled.

Presenting Problem:

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated

that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used:** CBT**Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. Therapist and patient discussed recent events in his life. He identified positive changes he was attempting to make. Therapist worked with patient to identify small concrete steps toward these changes. Therapist reminded patient not to shift from extremes. For example, patient, typically rigid, expressed a desire to sell his house and have no attachments to anything. Therapist worked with patient on reasonable changes. Further conversation focused on patient's interactional style with people.

Response to treatment: [] None [**X**] Some [] Significant [] Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

ASSESSMENT**Diagnosis:**

Axis I: Generalized Anxiety Disorder

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 13 Nov 2017

Major Depressive Disorder, Single Episode, Moderate
 Alcohol Abuse Disorder
 Axis II: Diagnosis deferred on Axis II
 Axis III: Deferred
 Axis IV: Financial stress, lack of social support, occupational/legal stressors
 Axis V: 60

Prognosis: () Excellent **(X) Good** () Fair () Guarded () Poor

Patient's capacity to participate in and benefit from therapy is evidenced by:

(X) good insight/judgment, (X) a desire to resolve their disorder, (X) verbal agreement to the treatment plan

Safety Risk:**Non-Modifiable Factors:**

Gender (risk factor if male):	Yes
H/O Suicide Attempts:	Yes – twice in adolescence

Harm to Self: () Not Elevated () Low **(X) Intermediate** () High

Harm to Others: **(X) Not Elevated** () Low () Intermediate () High

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: **(X) Outpatient** () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 27 September 2017

Reviewed with patient on: 27 September 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress: Patient continues to experience suicidal ideation with no intent/plan.

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would **NOT** like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications

Military Specific Interventions:

1. The Command **WAS** directly notified of the current condition of the patient.

2. Pt **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.

 Provider: **RAGLAND, MARY**

Reason for Appointment:

process group

Appointment Comments:

ctc

Note Written by RAGLAND, MARY @ 04 Oct 2017 1007 EDT**Process Group 0730-0845**

S: Topics discussed: Introductions, stressors which impacted drinking and/or recovery. Ct shared openly about his prior treatment experiences for alcohol, his recent relapse episode which led to this ATS referral. Ct shared very openly about negative childhood experiences related to being the child of divorced parents. Ct described recent trouble for "sexual harrassment" presented in a way as warning the other group members not to "post photos of yourself on social media" or "ask a civilian to speak outside of work". Ct related to another peer about SMART Recovey and they determined they lived near each other. Ct suggested they carpool to meetings.

O: Ct arrived on time for group SM alert and oriented x 3.

Appearance: Appropriate for weather /situation

Behavior: Appropriate, engaged

Speech: Within Normal Limits

Thoughts: Logical, Linear, Goal-Directed

Mood: Euthymic

Affect: Congruent

Insight: Intact

Judgment: Intact

SI/HI: None reported

Med/Pain Issues: None reported

A: Ct participated appropriately in discussion. Ct demonstrates commitment to sobriety/recovery.

P: Ct to continue with groups as assigned.

Reason for Appointment:Written by CHELLAPPA,MARY R @ 03 Oct 2017 1147 EDT
TMS**S/O Note** Written by BAHROO,BHAGWAN A @ 03 Oct 2017 1221 EDT**Reason for Visit**

Visit for: TransCranial Magnetic Stimulation for depression (12:05-12:50).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

SSN: ***-**-****

DoD ID: 1286180538

Created: 13 Nov 2017

This session number 13/ #3 at 120% MT.

Objective

Plan: SM next session scheduled.

S/O Note Written by BRAGGS,DEBORAH C @ 03 Oct 2017 1226 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information:

Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 120%. TMS Treatment for depression session #3 at therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 12 second intervals for a total of stimulation time of 20:10 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 3 with MT level at therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

Comments: Allergic to cats**S/O Note** Written by KHRAMTSOV,ANDREI N. @ 12 Oct 2017 1254 EDT**Chief complaint**

The Chief Complaint is:

Difficulty staying asleep.

History of present illness

The Patient is a 32 year old male.

He reported: Military service in the Navy and currently on active duty.

Patient reports gasping , witnessed apnea, difficulty staying asleep , non refreshing sleep, hypersomnia, feeling tired, See paper note .

Past medical/surgical history**Diagnoses:**

No coronary artery disease

No congestive heart failure.

No hypertension

No pulmonary hypertension.

No diabetes mellitus.

Cerebral artery thrombosis - without cerebral infarction.

Depression Anxiety, Patient denies suicidal or homicidal ideation

Personal history

Behavioral: No caffeine use mild excessive and not a current smoker.

Alcohol: Alcohol use H/o EOH abuse.

Review of systems**Encounter Background Information:** Medication list reviewed.**Otolaryngeal:** No nasal passage blockage (stiffness), no snoring, and snoring not exacerbated by nasal congestion.**Gastrointestinal:** Heartburn.**Genitourinary:** Nocturia.**Endocrine:** Decreased libido.**Musculoskeletal:** The legs do not feel restless.**Psychological:** Total Epworth Sleepiness score for likelihood of falling asleep during the day 19/24 Driving problems secondary

EDS.- yes and middle-night awakening with a choking sensation.

See paper note.

Physical findings**Vital Signs:**

° Current vital signs reviewed.

General Appearance:

° Awake. ° Alert. ° In no acute distress.

Neck:

Appearance: • Neck circumference 38 cm.

Obstructions:

Obstructions: • Airway was partially obstructed Mallampati class 2.

Lungs:

° Clear to auscultation is without wheezes, rales or ronchi.

Cardiovascular:

Heart Rate And Rhythm: ° Normal are normal, no murmurs, gallops or rubs appreciated.

Edema: ° Pretibial pitting edema not bilateral.

Neurological:

• Not oriented to time, place, and person. ° System: normal is grossly normal. Normal gait.

Objective

Assessment/Plan: The patient presents with some symptoms suggestive of Obstructive Sleep Apnea. y. Polysomnography/split has been ordered. Discussed with patient OSA, Insufficient Sleep Syndrome (ISS) and nasal congestion. The patient was counseled to maintain an ideal body weight to reduce the severity of the disease and related complications. The risks of alcohol and other sedatives were discussed. The patient was educated on positional therapy. The patient was counseled to avoid driving while excessively sleepy.(was stressed to patient with hypersomnia) !!!

SLEEP #1 RF0

Disposition Written by KHRAMTSOV,ANDREI N @ 12 Oct 2017 1302 EDT**Released w/o Limitations****Follow up:** as needed in the SLEEP (PULM) CL BE clinic. - Comments: meds. recon/immun.add

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding. - Comments: Given the multidisciplinary variables that have been considered in the evaluation and management of this patient's sleep complaints the medical decision making is of moderate to high complexity. The diagnostic procedures and therapeutic interventions are of high technical complexity thereby the overall data complexity for this patient's evaluation is moderate to high. At least 30 minutes were spent face to face with this patient (10 minutes reviewing questionnaire and history, 5 minutes reviewing medical record, 10 minutes educating and counseling on good sleep practices and strategies and 5 minutes coordinating care). PATIENT COUNSELED NOT TO OPERATE MOTOR VEHICLES IF FEELING TIRED.

Note Written by WILLIAMS,FELICIA P @ 02 Oct 2017 0928 EDT**Consult Order****Referring Provider:** TOBAR, EDEN**Date of Request:** 27 Jul 2017**Priority:** Routine**Provisional Diagnosis:**

R/o obstructive sleep apnea

Reason for Request:

32 y/o USN PO2 with chronic daytime fatigue despite adequate sleep time. Also intermittent headaches. Please evaluate for sleep disorder. Thank you.

Epworth Sleepiness Scale:*How likely are you to fall asleep in the following situations.*

0 = never 1 = slight chance 2 = moderate chance 3 = high chance

Situation	Chance of Dozing
Sitting and reading	2
Watching TV	2
Sitting, inactive in a public place (e.g. theater or a meeting)	2
As a passenger in a car for an hour without a break	3
Lying down to rest in the afternoon when circumstances permit	3
Sitting and talking to someone	1
Sitting quietly after a lunch without alcohol	3
In a car, while stopped for a few minutes in the traffic	2

TOTAL: 19**Fatigue***Please circle the number below that describes your fatigue over the past 2 weeks.***FUNCTIONAL OUTCOMES OF SLEEP QUESTIONNAIRE (FOSQ)**

1. Do you have difficulty concentrating because you are sleepy or tired?
2. Do you have difficulty remembering things because you are sleepy or tired?
3. Do you have difficulty driving short distances (<100 miles) because you're tired?
4. Do you have difficulty driving long distances (>100 miles) because you're tired?
5. Do you have difficulty visiting with your family or friends in their home because you become sleepy or tired?

(0) I don't do this activity for other reasons	(4) No difficulty	(3) Yes, a little difficulty	(2) Yes, moderate difficulty	(1) Yes, extreme difficulty

A/P Written by BRIDGES, EDWARD E @ 29 Sep 2017 1153 EDT

1. Irritable bowel syndrome with diarrhea: 32M with history of IBS-D, now with more formed stools since starting Effexor 3 months ago but persistent abdominal cramping.

-Will retreat peppermint oil 200mg daily for his abdominal cramping, with concurrent 4 week trial of protonix 40 mg daily to offset heartburn risk. We may increase peppermint oil to twice daily if clinically effective and tolerated. The patient will also continue to avoid heartburn triggers, including fatty meals, ETOH, coffee, spicy foods, and late night meals.

-Regarding other spasmodics: (1) He has previously failed hyocyanine, (2) He is a poor candidate for dicyclomine given its CNS effects, which may exacerbate his underlying psychiatric condition and pharmacotherapy

-Continue Effexor or transition to cymbalta per psychiatry

-Continue low fodmap diet, including no beer, no wine, no rum, no broccoli, no lettuce, no onions, no garlic, no beans, no spinach, no cabbage, no asparagus, no fruits, no sausage, no chorizo, no eggs, no polyols, and no dairy

-Additional recommendations to follow final anorectal manometry testing today.

Rectal Manometry Report

Patient Name: Daniel Dennis Anderson **SSN:** [REDACTED] **Date:** 9/29/2017**Age:** 32 **Sex:** Male **Race:** Caucasian **Phone #:** 4105625345 **Referring****Provider:** Bridges, Edward

Reason for study: The patient is a 32 y/o active duty male, with a history of substance abuse, anxiety, and depression, referred for rectal manometry in evaluation of fecal urgency and rare fecal smearing. He also reports a history of IBS-D dating to childhood, with daily abdominal cramping that peaks prior to defecation and is relieved after bowel movements. Historically, he has experienced 1 large volume liquid brown stool (BSS#7) per day, however, his stools have become more formed (BSS#4) over the past 3 months since starting Effexor and continuing a low FODMAP diet. Unfortunately, there has been no concurrent resolution of his abdominal cramps, which continue to be triggered by physical activity, anxiety, and stress. Peppermint oil was previously trialed for his cramps but discontinued shortly after starting due to heartburn, which resolved with peppermint oil cessation. He reports 5 to 15 minute urgency before

Medical Record

Anderson, Daniel Dennis

DOB: [REDACTED]

1985

SSN: ***-**-****

DoD ID: 1286180538

Created: 13 Nov 2017

defecating on every occasion and 2 episodes of trace fecal smearing in the setting diarrhea within the last year. He denies post stool leakage. His psychiatrist is currently considering transition to Cymbalta from Effexor.

CT A&P 2012 (evaluation of abdominal pain): Focal wall-thickening at the hepatic flexure with proximal stool retention.

Colonoscopy (McNally) in 2012: Mild congestion in the sigmoid but no masses or polyps; biopsies were unremarkable.

MRE 2012: Normal.

1. Physical Exam:

- a. **Appearance:** No internal/external hemorrhoids. Normal surrounding skin. No anal fissure.
- b. **Neurological exam:** Normal sensation to sharp/dull with cutaneous sphincter reflex not elicited.
- c. **DRE resting internal sphincter tone:** Normal
- d. **DRE pubo-rectalis sling:** Normal descent **with paradoxical squeeze of external sphincter.**
- e. **DRE external sphincter squeeze press:** Normal

2. Manometry findings:

- a. **Sensory threshold to rectal distention:** 15 ml (*NL* \leq 20ml)
- b. **Internal/External Resting Pressure (IAS):** 81 mmHg (*NL*= 59-74 mmHg)
- c. **External Sphincter Contractile Pressure (EAS):** 318 mmHg (*NL* > 100 mmHg)
- d. **Internal Sphincter relaxation with rectal distention:** Normal
- e. **Graduated relaxation:**

Bolus (ml)	Relaxation (mmHg)
15	10
20	18
30	34
40	33
50	54

3. Findings:

- Normal external sphincter squeeze pressure and normal descent of pubo-rectalis on DRE.
- Normal internal sphincter relaxation with balloon distension.
- Manometric evidence of elevated internal anal sphincter resting and normal external sphincter contractile pressure.
- Normal sensory threshold.
- Normal balloon expulsion test (able to expel 60mL water filled balloon within 60 seconds).

4. Impression:

- The patient's normal anorectal manometry is not consistent with a defacatory disorder.

5. Recommendations :

- Treat for IBS-D.
- Follow up with referring provider, Dr Bridges.

S/O Note Written by HANGEMANOLE, DESPINA C @ 29 Sep 2017 1133 EDT**History of present illness**

The Patient is a 32 year old male.

Focus Of Session: Treatment Planning

S) SM reported that he has been busy with appointments and will be finishing up with the VA this week. SM stated he had a sleep study on Monday and acknowledged he will be starting IOP process groups on Wednesday and then full IOP on 11 October. SM stated that he went to an AA meeting but walked out and spent time in his car trying to figure out why he had such a problem with AA. SM expressed that he felt the people in AA were of lower intelligence and didn't have much motivation to work on their problems behaviorally, though they verbalized a desire to change. SM stated he then went to a SMART recovery meeting and felt much more engaged there. SM stated he appreciates the CBT focus. SM was encouraged to keep an open mind about AA and he acknowledged there were many things about AA philosophy that he agreed with but that the meetings just didn't resonate with him. SM stated that he would need to be vigilant regarding the tendency to rationalize a return to drinking when he is "feeling better". SM stated that he feels he is working on the spiritual bankruptcy of addiction by connecting with his family and trying to connect more with friends. SM and this writer reviewed treatment planning goals. SM denied any alcohol use or thoughts about drinking. SM denied being in pain.

O) SM reported to session on time and was dressed casually. His mood was euthymic in session, affect congruent. SM's thoughts and behavior were appropriate.

A) SM was cooperative and friendly. SM was insightful in developing his treatment plan. SM appears to be thinking critically about his recovery and is open to feedback.

Alcohol Use D/O, Severe

P) SM will follow up with social worker next week. SM will begin ATS groups on 4 October.

Reason for Appointment: Written by SANTIAGO, HANNAH L @ 28 Sep 2017 1304 EDT
TMS

S/O Note Written by BAHROO, BHAGWAN A @ 28 Sep 2017 1333 EDT

Reason for Visit

Visit for: TransCranial Magnetic Stimulation for depression (12:05-12:50).

Subjective

A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 11/ #1 at 120% MT.

Objective

Plan: SM next session scheduled.

Reason for Appointment: Written by CHELLAPPA, MARY R @ 27 Sep 2017 1144 EDT
 TMS

S/O Note Written by BRAGGS, DEBORAH C @ 27 Sep 2017 1216 EDT

History of present illness

The Patient is a 32 year old male.

He reported: Encounter Background Information: Pre procedure: Thought content was without evidence of suicidal or homicidal ideation and SM behavior during the session was appropriate; SM arrived for TMS without evidence of distress. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos. SM placed ear plugs in his ears. SM was placed into the chair and placed into the Head Support System with guidance tape adhered to the forehead. Laser light used for midline placement and lateral canthus alignment completed.

Procedure: MT 80% up to 120%. TMS Treatment for depression session #1 at non therapeutic level; administered using settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total of stimulation time of 21.21 minutes. A procedural time out was done during which settings and patient was re-identified.

PROGRESS IN MEETING GOALS:

This is session # 1 with MT level at non- therapeutic treatment level for entire session.

Post Procedure: SM monitored briefly. SM had no reports of distress associated with TMS. PLAN: Data is reviewed with

Medical Record

Anderson, Daniel Dennis DOB: [REDACTED] 1985 SSN: ***-**-**** DoD ID: 1286180538 Created: 13 Nov 2017

treatment team and data did not suggest any changes to treatment plan at this time. Treatment plan will continue as is pending further review. Next session scheduled for tomorrow.

S/O Note Written by BAHROO,BHAGWAN A @ 27 Sep 2017 1241 EDT

Reason for Visit

Visit for: Initial session for TransCranial Magnetic Stimulation for depression (11:50-12:30)

Motor threshold was determined on 12 September 2017 and SM has so far received a total of 9 sessions for Anxiety.

Subjective

A procedural time out was done during which settings and patient was re-identified.

Thought content was without evidence of suicidal or homicidal ideation and patient behavior during the session was appropriate.

Patient arrived for TMS mildly anxious. Confirmed that there was no metal above the waistline, no history of seizure disorder, no physiologic sensing devices, no metallic facial or neck tattoos

SM was not anxious at start of procedure. At conclusion of the procedure the settings were determined to be: SOA = 30, AP Bar = 10.7, Coil Angle = 10.0, SMT = 0.94; The headrest settings were: up/down 7.5; front/back 1.0

After finding level and location the first treatment was administered using standardized settings of 3000 pulses given at 10 pulses per second, with 4 second stimulation times, in 26 second intervals for a total stimulation time of 37.5 minutes.

Adjustments were made to accommodate comfort.

This session number 10/initial session started at 80% and ended with 120% MT.

Objective

Plan: SM next session scheduled.

Patient with access to weapons: No

Notes from current session:

Patient presents for follow-up appt. We last met three weeks ago, at which time we increased his Effexor xr to 225 mg po qam. Today pt states he doesn't think it has been helpful. He completed IOP last Thursday. He is going through the MEB process, getting his VA appts done. He is starting TMS with IOP today. He has a sleep study coming up. He was prescribed ramelteon during IOP which he didn't think was helpful. He has tried taking melatonin 10 mg OTC which is more helpful. He officially had his name changed and is working with his therapist on trying to figure out what he wants from here. He states he forgot to ask her about being referred to a sexual trauma group as he discusses a male cousin tried to force himself on pt when pt was age five but pt says he was able to get away. He describes another incident when he was older and at a sleepover at a friend's and the friend tried to force himself sexually on pt so pt fled. We discussed he should bring this up with his individual therapist before considering pursuing group therapy. He continues to take naltrexone but admits he did drink half a beer once. He is still in ATS and told them. He continues to have IBS symptoms and states GI suggested discussing switching his SNRI to Cymbalta with me. He denies suicidal thoughts.

History of Present Illness:

Pt presents to establish care with new psychiatrist. Pt completed BHDP after appt. He was previously seen by Dr Zembrukska, most recently in Nov 2015, for medication management of Generalized anxiety disorder, at which time he wanted help tapering off of Zoloft as he felt excessively sleepy on it. Pt returns to treatment today because he has been experiencing increased stress and mood swings. He also states he was diagnosed with Reactive Attachment Disorder and Borderline Personality Traits while in dual diagnosis treatment in Ft Belvoir and wants this documented in his record as he believes he has these diagnoses and doesn't think they made it into his record. Regarding anxiety, pt states he finds in the morning on his way to work he experiences physical tension, increased heart rate, nausea. He likes his job with NIOC but finds it stressful juggling his collateral duties. He has also been picking at his crown since 2008 so that he has a half-dollar size patch of no hair where he has picked it out. He reports struggling with irritability and says when he was stationed on a ship he often felt angry due to being in close proximity to other people, and got into three fights and broke his hand while on the ship. He is concerned about being like his father, whom he states was often angry and physically disciplined pt when he was growing up so that he had bruises at times. He doesn't like being touched. He finds when he dates someone he experiences no empathy for them, or becomes easily irritable. He states he has been dating someone for three months and would like to break up with them. He has poor sleep maintenance, often waking up between 0200-0400. Nevertheless, he states he 'loves sleeping.' He doesn't recall dreaming. He enjoys painting, making bread, and cooking. He also loves programming and says he can say up for days working on this as he has a side business doing this. He admits to \$36,000 in credit card debt which he says is due to buying his stepbrother a car as well as furniture for his home. Pt says he owns a home in Florida that he could sell to pay this off. His appetite is normal. He has trouble focusing at work. He feels guilty when he gets angry. He has had suicidal thoughts throughout his life. The last time this happened was three-four weeks ago, when he had thoughts about jumping off of a roof related to juggling multiple work responsibilities.

Past Behavioral Health History:

Past counseling/therapy: Yes, saw Ms Nilsen previously, didn't find it helpful.

Past Meds for Behavioral Health reasons: Yes, Zoloft 50 mg, felt tired and 'tranquilized' on it. Wellbutrin Dec16 not tolerated.

Past Behavioral Health hospitalizations: Completed 28 day inpatient alcohol rehab at Ft. Belvoir.

Past problems treated: Confirmed from Dr Z's note that "Attempted suicide at 16 y/o by overdosing on Aspirin and Alcohol in context of conflict with father. Did not seek care. Attempted suicide (?) at 17 y/o by consuming a large quantity of alcohol and blacking out. Did not seek care. Denies self-injurious behavior."

Family Behavioral Health History:

Grandmother and sister have bipolar disorder. Says sister is frequently hospitalized and uses drugs. Lost custody of her children. Thinks grandmother and other sister are on Wellbutrin.

Medical History: as per Dr Z's notes: Penile warts (HPV)

Neurotic excoriation (scalp picking when anxious)

Asthma during childhood

Allergic response to pets

Recurrent intestinal pain (possibly lactose intolerance)

PRK (2011)

Patient denies significant nutrition concerns.

Substance Use:

Caffeine Use: Yes Cups/Day Equivalent: 4

Tobacco/e-cigs: none PPD Equivalent:

Alcohol: AUDIT-C: 6 - Hazardous drinking possible, see full AUDIT. States he drinks two glasses of wine per night Friday-Sunday. Cut back two months ago. Denies drinking alcohol during the week.

Illicit drug use: denied

Developmental/Social History:

Patient was primarily raised by Biological parents and that childhood was generally Poor. Parents were divorced or separated when patient was 3 yrs old. Father had custody of pt and his sisters because, pt states, of an incident in which mother disciplined sister and left red marks. Father was physically abusive to them, however.

Patient admits ever being physically, sexually or emotionally abused. Pt believes he was molested by his

'uncle's son" when pt was between the age of five and ten. Uncle's son was in his teens. Pt can't remember exactly; started having this memory while at Ft Belvoir. Doesn't know where uncle's son is now.

Highest level of education achieved is: High School graduate.

Patient is currently single and currently lives with Roommate. Housing is currently Off-Post.

Patient reports religion, faith or spirituality DO NOT play an important role in life.

Social support reported as satisfactory.

Patient reports the following history of legal issues: Drug/Alcohol Issues.

Past Family/Medical History:

Family Medical Illnesses: Diabetes, Heart Disease or Stroke, High Blood Pressure

Family Behavioral Health Illnesses: Depression, Anxiety Problems, Bipolar Disorder (Manic Depressive)

Family Substance Use History: Alcohol, Prescription Drugs, Street Drugs

Learning / Needs Assessment:

Community Resources Used: None

Patient denies treatment team needs to be aware of specific ethnic/cultural issues.

Learns best by: Pictures. Learning is adversely affected by: None.

Patient would not like family members involved in care.

Patient would like the following information at this appointment: Diagnosis, Medications, Follow-up Care

Mental Status Exam:

Appearance: Neatly groomed in casual clothing.

Behavior/Orientation: Polite, and cooperative.

Abnormal Movements:normal gait. No abnormal movements apparent.

Rapport:fair

Speech:talkative

Mood:stable

Affect:full

Thought Process: circumstantial

Thought Content: denies current suicidal intent/HI/AVH

Judgment: fair

Insight:fair

Impulsivity: none at time of interview

Cognition:grossly intact

Fund of Knowledge:wnl

Assessment:

Safety Risk: This provider considered all of the risk/protective factors, both acute/chronic for harm to self or others and has determined the following overall risk level:

Harm to Self: ☐ Not Elevated ☒ Low ☒ Intermediate ☐ High
Harm to Others: ☐ Not Elevated ☒ Low ☐ Intermediate ☐ High

Diagnosis:

Generalized Anxiety Disorder per psychologic testing; MDE; r/o persistent depressive disorder; Alcohol Use Disorder; Trichotillomania

PLAN:

Patient was educated about and stated understanding of the diagnosis. Patient collaborated on and agreed to the following treatment plan:

Setting: ☒ Outpatient ☐ Inpatient ☐ IOP ☐ Other: _____

Labs: ☐ CBC ☐ LFTs ☒ TSH ☐ Chem 8 ☐ Lipids
☐ Fasting Glucose ☐ HCG ☐ UDS ☐ Vit B12 ☐ _____

Safety Plan:

☒ Patient released without limitations, verbally commits to plan below and current safety to self/others.
☐ Patient released to Chain of Command with the following limitations: _____

Patient is **NOT** deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Problem #1: anxiety, depressed mood

Goal: pt will experience decrease in anxiety and improvement in mood

Objective: pt will continue medication

Intervention: since pt is not finding Effexor helpful, agreed to cross taper of Effexor to Cymbalta as

follows:

Week 1: Decrease Effexor XR from 225 mg to 150 mg every day.

Week 2: Decrease Effexor XR from 150 mg to 75 mg every day.

Week 3: Stop taking Effexor XR 75 mg. In its place, start Cymbalta 60 mg daily.

Measure: gad7, pcl, phq9

Problem #2: safety

Goal: pt will refrain from acts of self-harm

Objective: pt will refrain from acts of self-harm

Intervention: pt agrees to call 911, return to clinic, or go to ED if he becomes actively suicidal with plan.

Measure: self report

Problem #3: alcohol use

Goal: pt will abstain from drinking

Objective: pt will refrain from alcohol use

Intervention: continue naltrexone 50 mg po daily. Normal b12 panel drawn after July 2017 visit.

Measure: self-report, lab results

Therapy Type:

Not Set

Planned Frequency: None

Patient's capacity to participate in and benefit from therapy is evidenced by:

[] good insight/judgment, [x] a desire to resolve their disorder, [x] verbal agreement to the treatment plan

Medication: Medication reconciliation completed. Reviewed risks, benefits, major/common side effects, and alternatives of medication plan with patient who stated understanding and agreement with plan.

Patient told to abstain from ETOH, drugs of abuse, and OTC remedies. If experiencing sedative effects from meds, patient told not to drive or operate vehicles, including heavy machinery.

Follow-up: three weeks

Occupational:

1. The Command **WAS NOT** directly notified of the current condition of the patient.
2. Patient **HAS NOT** granted permission to discuss HIPAA-protected information to the Command.
3. A new/revised profile **HAS NOT** been written for patient by this writer today.

WR ADULT BEHAVIORAL HEALTH CLINIC
FOLLOW-UP NOTE

Patient Name: Daniel Anderson (previously Merwin)
 Patient last 4: 0538
 Appt #: Intake + 13
 Therapy time: 60 minutes
 E&M time: 60 minutes

Identifying Data: 32-year-old, Single, Caucasian, Male**Military Data:**

Branch: USN
 Rank: PO1
 MOS: CTN
 TIS: 11-years
 Deployments: N/A
 Deployment Related: N/A
 Trauma: N/A
 WTU: N/A
 MEB in progress: N/A
 AdmSep in progress: N/A
 Special Clearance: Yes

Presenting Problem:

Patient presents for follow up care related to symptoms of depression and anxiety. Patient reports dealing with depression and anxiety since childhood. He has a documented diagnosis of Generalized Anxiety Disorder. He endorses the current anxious symptoms: nervousness, uncontrollable worry, difficulty relaxing, restlessness, irritability, feeling something awful might happen, and excessive worry about multiple areas of his life. Further, patient identified a bald spot on the top of his head where he has been picking at his scalp due to anxiety. Patient also endorses the following mild depressive symptoms: low mood, anhedonia, fatigue, feelings of worthlessness/guilt (each rated at few or several days). Patient reports fleeting intermittent suicidal ideation 1-2 times a month with no plan or intent.

Current stressors include: workplace stress, financial debt, and interactions with his girlfriend.

Additionally, patient described considerable detachment from others. He stated that he does not care about other people and finds it difficult to interact with them. He described switching from apathy to anger

towards others quickly. Patient noted that while he was inpatient for alcohol abuse rehab at Ft. Belvoir he was also diagnosed with Reactive Attachment Disorder and Borderline Personality Traits. Patient stated that this wasn't documented in his records to protect his career opportunities. However, patient now wants to access best possible care options related to all of his diagnoses.

SUBJECTIVE/OBJECTIVE**Recent Outcome Measures (last 30 days):**

9/6/2016	BASIS-24	GENERAL DISTRESS	2.19	Moderate to High level of general distress reported
9/6/2016	PHQ9	DEPRESSION	13	Minor depressive symptoms reported. Evaluation indicated.
9/6/2016	GAD7	ANXIETY	15	Moderate anxiety symptoms reported. Evaluation indicated.
9/6/2016	4QPTSD	PTSD SCREENER	3	PTSD possible, see PCL. Evaluation indicated
9/6/2016	PCL-5	PTSD	37	Some PTSD symptoms reported

Notes from Today's Session:**Treatment modality currently used: Treatment Planning****Pain:** 0/10

Patient **IS NOT** currently in a situation where they are being verbally or physically hurt, threatened, or made to feel afraid.

Therapy:

Patient presented for therapy on time. Patient was last seen 14 August 2017. Patient recently completed IOP. He stated that he learned a lot of new tools from IOP and had things he knew refreshed. Patient is hopeful about the future and the potential options he has about paths. Patient relayed his ideas to the therapist. Therapist encouraged patient to work on breaking down larger goals into small concrete goals. This includes personal well-being and mental health. Patient will be referred to OT and Rec Therapy to work on coping and increasing life functioning. Therapist and patient discussed next steps in MEB. He is almost complete with VA appointments. Therapist and patient discussed patient's schedule and appointment load.

Response to treatment: [] None [**X**] Some [] Significant [] Marked

Mental Status Exam:

Patient was alert and oriented to person, place, and time. He appeared to be his stated age. He is of average build and height walked with a normal gait. Patient was groomed appropriately and dressed in casual attire. He was cooperative and polite and engaged in session. He reported his mood as anxious and depressed and affect was mood and context congruent. Speech was coherent and normal in rate, tone, rhythm, and volume. Thought processes were logical and goal directed. Hallucinations or delusions were not endorsed or evidenced in session. Patient's judgment and insight are good. No homicidal thought/intent/plan reported. Patient reports fleeting intermittent suicidal ideation 1-2 times a week with no plan or intent.

TREATMENT PLAN

Patient was educated about and stated understanding of the dx. Patient collaborated on and agreed to the following tx plan:

Setting: **(X) Outpatient** () Inpatient () IOP () Other: _____

Safety Plan:

() Pt released without limitations, verbally commits to plan below and current safety to self/others.

() Pt released to Chain of Command with the following limitations: _____

(X) Pt is NOT deemed an imminent threat to self or others. Patient was instructed in how to seek emergency care if safety issues arise, including dangerous reactions to medications.

Treatment Team:

Therapy: Dr. Paul

Medication Management: Dr. Tobar

Groups:

Date last updated: 27 September 2017

Reviewed with patient on: 27 September 2017

Does patient agree with plan? Yes

Problem #1 Suicidal Ideation

Goal: Extinguish suicidal ideation

Objective: Extinguish suicidal ideation

Intervention: CBT, Supportive therapy

Measure: PHQ-9

Progress: Patient continues to experience suicidal ideation with no intent/plan.

Problem #2 Anxiety/Depressive symptoms

Goal: "Handle stress better"

Objective: Increase positive coping skills to manage life stressors

Intervention: CBT, Supportive therapy

Measure: GAD-7

Progress: Patient gaining insight on maladaptive behaviors.

Follow-up's scheduled: 2-weeks

Referrals made today:

Patient would **NOT** like information on the following at this appointment:

Alpha Stim, TMS, Group Psychotherapy, Nutrition Referral, Spiritual Interests, Medications
